rare-earth metals, mag. ordering, electronic struct. 2=23114
rare earth metals, on s-f-exchange model 2=4214
rare earth–Y dilute alloys, 1.6° to 7.2°K 4=4392
relaxation time, in paramag. range 3=13265
small particles, superantiferromagnetism rel. to magnetocrystalline coupling 2=10679
spinels, cubic, classical spin-configuration stability in presence of competing exchange forces 0=1813
spinels, mag. interaction mechanism 0=1814
spinels, vanadium, rel. to interatomic distance 3=12934
susceptibilities due to interstials, holes 3=15904
susceptibility, h.f., in longit. mag. field 2=756, 23691
susceptibility, high temp. 1=20148
susceptibility, at high temps., Ising model 0=21036
susceptibility, with mag. ion f.c.c. lattice 0=4501
susceptibility and specific heat, temp. depend. 0=1815
3d transition metal bromates and iodates, nucl. quadrupole resonance study 1=7807
35 crystal classes, linear magnetostriction 4=4389
transition element–rare earth cpds., antiferromag. coupling 2=12749
transition-metal niobates and tantalates, spin configuration 2=6814
Tutton salts < 1°K, nuclear orientations, molecular field model 2=13496
Wurster's blue perchlorate, transitions 1=17364
Au–Cr alloys (Cr > 13 atom %) 1=20162
AuMn, alignment in t_2 phase 2=23690
Au–Mn alloys 0=4483
Au–Mn alloys, dilute, low-temp. transition 4=17650
Au_3Mn, antiferromag.–ferromag. spatially inhomo. state 3=1003
AuMn, mag. struct. neutron diffr. study 2=10683
Au_3Mn, Néel and Curie temps., Bohr magneton, magnetization 3=1004
Au–Mn–In, transition to ferromag. with comp. 2=10682
$BaO.Fe_2O_3$ 1=14735
$BiFeO_3$ 3=3147
$BiFeO_3$, magnetic ordering, by neutron diffraction, 20 and 600°C 3=5018
$BiFeO_3$—$LaFeO_3$, change, simultaneous with dielectric transform 4=4214
$BiFeO_3$–$Sr(Sn_{1/3}Mn_{2/3})O_3$, phase transform., and Sn^{119} Mossbauer change 4=15658
$CaCO_3$, transition, rel. to specific heat, 1.6° to 70°K 3=17659
$Ca_3Fe_2Ge_3O_{12}$ garnet, antiferromagnetism 0=11893
$Cd_{0.8}Mn_{2.2}O_4$, < 200°K 4=26345
Ce Mg nitrate, ordered spin T → 0°K, int. field calc. 4=28317
Co-Tutton salt 3=1058
Co vanadate (IV), magnetization reversal and asymmetry 0=6246
Co^{++} ammine and anhydrate salts, susceptibility at low temp. 1=14765
$CoBr_2$, susceptibility 0=13845
$CoBr_26H_2O$, below 3°K, from proton resonance and heat capacity study 0=3099
$CoBr_2 \cdot 6H_2O$, space group, from p.m.r. 4=13262
$CoCO_3$, at low temps. 1=3919-20
$CoCO_3$, moment meas. 4=7298
$CoCO_3$, transition, rel. to specific heat, 1.6° to 70°K 3=17659
$CoCl_2$ 3=20626
$CoCl_2$, ordering in layer structure 3=20625
$CoCl_2$, ordering, thermal anomaly 2=6272
$CoCl_2$, spin waves, semicontinuum model 3=13286
$CoCl_2$, susceptibility 0=13845
$CoCl_2$, theory 0=13848

Magnetic properties of substances—contd

$La_{0.5}Sr_{1.5}MnO_4$, interactions, order, neutron diffn. study 4=28858
$LiCuCl.2H_2O$, coexistence with paramag. state 2=8609
$LiCuCl_3.2H_2O$, n.m.r. studies 1=20165
$LiCuCl_3.2H_2O$, neutron-diffraction study 4=7301
$LiFeO_2$, ordered and disordered, by neutron diffr. and Mössbauer 4=4394
$LiMnPO_4$, Mn—O—P—O—Mn superexchange 3=18151
$Mg[Cr_2]O_4$, spinel, Néel temp. 4=13266
Mg–Mn alloys, low-temp. transition 2=14763
$Mg[V_2]O_4$, spinel, Néel temp. 4=13266
MgV_2O_4 spinel, spin moments, coupling 4=13597
α-Mn, and alloys 1=6379
Mn alloys, interactions 3=1001
α-Mn, hyperfine coupling 4=20568
Mn pairs in MgO biquadratic superexchange theory 4=23025
Mn telluride, susceptibility, structure 3=11104
Mn-Tutton salt 3=1058
Mn^{++} ammine and anhydrate salts, susceptibility at low temp. 1=14765
Mn_2As, atomic moments, mag. struct. 2=12741
Mn_2As, rel. to temp. 1=11459
MnAu and $MnAu_3$ 0=13737
$MnAu_2$ 0=1818
$MnAu_2$, ferromagnetic transform., at low temps, exchange interaction mechanism 3=20573
$MnAu_2$, mag. structure, influence of mag. field 0=8063
$MnAu_2$, magnetization in pulsating fields, temp. depend. 3=3136
$MnAu_2$, neutron diffrac. study 1=12546
$MnAu_2$, transformation, threshold field magnitude and temp. rel. to pressure 3=18116
$MnBr_2$, neutron diffract. studies 0=13849
$MnBr_2,4H_2O$, nuclear orientation of Mn^{54} and Co^{60} 1=3585
$MnBr_24H_2O$, susceptibility 1-300°K 0=16144
$MnCO_3$, Curie point shift with press. 2=18926
$MnCO_3$, mag. moment, superexchange interaction 0=11902
$MnCO_3$, magnetic sp. ht. 2=4237
$MnCO_3$, magnetic spec. heat 3=3145
$MnCO_3$, neutron diffraction study 0=11851
$MnCO_3$, ordering, effect on optical absorption 4=17574
$MnCl_2$, liq. He temps., rel. to specific heat 3=2731
$MnCl_2.4H_2O$, nuclear orientation of Mn^{54} and Co^{60} 1=3585
$MnCl_24H_2O$, susceptibility 1-300°K 0=16144
$MnCl_24H_2O$, susceptibility and relaxation 0=10095
Mn—Cr, mag. structure meas. by neutron diffn. susceptibility meas. 4=29146
$Mn_{2-x}Cr_xSb$, ferrimag. transition mech. 4=17661
$Mn_{2-x}Cr_xSb$, x = 0.023-0.10, structure 3=23197
$Mn_{2-x}Cr_xSb$, X-ray and mag. studies 3=13282
Mn—Cu, transition, Mn rich 4=13270
MnF_2 0=3104
MnF_2, absence of antiferromag. domain walls 2=758
MnF_2, antiferromagnetic domain walls 4=26450
MnF_2, antiferromagnetic excitations 4=15661
MnF_2, Curie temp. shift by high pressure 0=8073
MnF_2, domains, polarized neutron study 2=10684
MnF_2, effect of cooling 3=3143
MnF_2, lattice thermal cond. below Néel temp. 3=25212
MnF_2, magnetization of sublattice at 0°K 0=6272
MnF_2, microwave Faraday rotation, 30-300°K 0=3098
MnF_2, n.m.r. of F^{19} under pressure, 4.2-35.7°K, Néel temp. press. depend. 0=10249
MnF_2, nuclear spin—lattice relax., calc. 3=18137
MnF_2, rel. to optical absorption bandwidth 3=25461
MnF_2, optical absorption studies 1=1162
MnF_2, piezomagnetism 4=30726
MnF_2, powdered 0=3107
MnF_2, spin-flopping in high mag. fields 1=6380
MnF_2, spin-wave scatt. of phonons, analysis 4=28852
MnF_2, spin wave dispersion, 4.2°K, neutron diffr. exam. 4=13272
MnF_2, spin wave theory rel. to expt. 4=7254
MnF_2, spin waves, dispersion relation, neutron inelastic scatt. 1=14762
MnF_3, superexchange interaction 0=18207
MnF_2, susceptibility, 1°-45°K 3=18115
MnF_2, susceptibility, n.m.r. det. 4=26353
MnF_2, u.s. attenuation, near Néel temp. 4=1388
$Mn^{55}F_2$, n.m.r., low temp., zero field 4=28902
$MnF_2—ZnF_2$, optical absorption studies 1=1162

Magnetic properties of substances—contd
antiferromagnetic—contd
$Mn_3Fe_2Ge_3O_{12}$ garnet, antiferromagnetism 0=11893
Mn_3Ge_2 2=8604
Mn—Ge, saturation moment rel. to composition 3=1005
$Mn_{2.35}Ge$, susceptibility, temp. depend. 1=1249
Mn_5Ge_2, regions of perfect compensation 4=23020-1
$Mn(HCOO)_2.2H_2O$, linear chain antiferromagnetism, rel. to crystal structure 4=17671
MnHg, susceptibility 1=20166
MnI_2, below 3.40°K 2=8661
$MnNH_4$-Tutton salt, below 1°K 0=13738
Mn–Ni alloys, 2-300°K 0=13853
Mn–Ni disordered alloys, 2-300°K 0=13853
MnO, additional biquadratic exchange term in spin Hamiltoniam 3=20627
MnO, and crystal lattice distortion, anisotropic 4=13271
MnO, effect on elasticity, temp. var, 3=6774
MnO fine grains, superantiferromagnetism 3=1093
MnO, mag. susceptibility, magnetostriction 2=12717
MnO single crystal, mag. anisotropy 1=9045
MnO single crystal, susceptibility 0=13850
MnO, superexchange and delocalization effects 0=13851
MnO, superexchange interaction 0=18207, 21058
MnO, superexchange in, theory 0=1817
MnO, susceptibility rel. to temp. 3=1015
MnP, 4°-50°K meas. 4=28819
$Mn_{38}Pd_{62},\beta_2^{(1)}$ phase 1=20167
MnRh ordered alloy, 170-4°K range 3=15752
MnS, exchange interactions 1=3918
MnS, ordering in stacking faults 1=912
β-MnS, spin arrangement, Moriya interaction appl. 2=12796
$MnSe_2$, transitions, temp. var., neutron diffn. meas. 4=28822
MnSiF .6H O, nuclear orientation of Mn^{54} and Co^{60} 1=3585
$Mn_{1.77}Sn$, anomalous properties 1=14764
Mn—Sn, saturation moment rel. to composition 3=1005
$MnSn_2$ 1=14761
$MnSn_2$, anomalous properties 1=14764
$MnSn_2$, transitions, temp. var., neutron diffn. meas. 4=28822
$Mn_{3.67}Sn$, anomalous properties 1=14764
MnTe, thermoelectricity, magnon drag. contrib., errata 4=26161
MnTe, transition, $K_{\alpha_{1,2}}$ X-ray lines of Mn, shape and width 4=15662
$MnTiO_3$, structure 0=21200
$MnUO_4$, structure at low temps. 3=3139
Mn–Zn fluoride solid solns., susceptibilities 1=20168
Mn—ZnF_2, Néel temperature 1=9046
Mo, absence, by neutron diffraction study 3=3141
MoF_3, antiferromagnetism below 185°K, neutron diffr. study 1=1251
NH_4MnF_3, structure, neutron diffn. meas. 4=28859
$NaCuF_3$ 2=23853
Na_2CuF_4 2=23853
$NaMnF_3$, structure, neutron diffn. meas. 4=28859
$Nb_2Co_4O_9$, exchange interactions 4=10300
$Nb_2Mn_4O_9$, exchange interactions 4=10300
$Nb_2O_5.4CoO$, Néel and Curie temperature 1=2488
$Nb_2O_5.4MnO$, Néel and Curie temperature 1=2488
Nd, 1.6-20°K, neutron diffr. exam. 4=13273
Nd, specific heat analysis, 0.4°-4°K 4=9853
$NdFeO_3$, neutron diffr. study, 1.25-955°K 0=10187
Nd_2NiO_4 3=18107
Ni^{++} ammine and anhydrate salts, susceptibility at low temp. 1=14765
$NiBr_2.6H_2O$, space group, from p.m.r. 4=13262
$NiBr_2$ susceptibility maximum near 60°K 1=20169
$NiCO_3$ 3=1115
$NiCO_3$, transition, rel. to specific heat, 1.6° to 70°K 3=17659
$NiCl_2$ 3=20626
$NiCl_2$, ordering in layer structure 3=20625
$NiCl_2$, spin waves, semicontinuum model 3=13286
$NiCl_2$, theory 0=13848
$NiCl_2.6H_2O$, proton resonance 1=3951
$NiCl_2.6H_2O$, space group, from p.m.r. 4=13262
Ni—Cr alloys, exchange interaction 4=23032
NiF_2 0=13852
NiF_2, spin wave enhancement in domain walls 3=18114
NiF_2, theory, using spin Hamiltonian approach 0=4502

Magnetic properties of substances—contd
  antiferromagnetic—contd
    Ni$_3$Fe alloy, relationship to ordered state 0=21062
    ~ NiFe$_{0 \cdot 15}$Cr$_{1 \cdot 85}$O$_4$ with NiO impurity, exchange anisotropy memory effect 0=13841
    NiFe$_{2-x}$V$_x$O$_4$ spinel, sat. magnetization and susceptibility rel. to temp. 3=1008
    Ni(IO$_3$)$_2$.2H$_2$O, nucl. quadrupole resonance study 1=7807
    Ni–Mn, antiferromag. structure 0=11922
    Ni$_3$Mn, rel. to atomic ordering 2=16926, 18925
    Ni$_3$Mn, exchange interaction, magnetization temp. depend. 3=20583
    Ni$_3$Mn and ordering temp. 3=20623
    Ni–NiO system, ferro–antiferromagnetic exchange interaction 1=6271
    NiO, and crystal lattice distortion, anisotropic 4=13271
    NiO crystals, domain walls 0=16147
    NiO, domain anisotropic deformation 4=4264
    NiO, domain structure, birefringence obs. 3=18109
    NiO, domain walls, twin structure 3=15912
    NiO, domains, neutron and optical studies 0=21063
    NiO, electron diffr. scatt., polarized 3=18111
    NiO, electron diffraction exam. 3=3135
    NiO fine grains, superantiferromagnetism 3=1093
    NiO fine grains, suscept. rel. to diam., 20 to 400 A 3=1094
    NiO fine particles 3=8697
    NiO fine particles, susceptibility meas. 3=1095
    NiO, fine particles 20-400 A diam. 3=3137
    NiO, fine particles, weak ferromagnetism 2=12668
    NiO, mag. structure, neutron diffrn. study 3=3289
    NiO, mag. structure, neutron diffraction study 0=11919
    NiO, mag. susceptibility, and magnetostriction 2=12717
    NiO, magnetostriction 1=14758
    NiO, magnetostriction 3=1016
    NiO, magnetostriction, anisotropic 2=759
    NiO, 0.24 eV absorption band, antiferromag. origin 0=653
    NiO single crystals, mag. structure 0=11917
    NiO, spin-dependent i.r. absorption band model 4=10182
    NiO, structure, electron diffr. study 3=1157
    NiO, superexchange and delocalization effects 0=13851
    NiO, superexchange interaction, spin-dependent energy 0=11920
    NiO, T-domain walls, electron microscope obs. 3=20622
    NiO with Ni film, exchange anisotropy interactions, torque study 4=13209
    NiO–O system 2=10681
    NiRh$_2$O$_4$ 3=23196
    NiSO$_4$, structure by neutron diffr. 2=6679
    NiTiO$_3$ 3=15906
    NiTiO$_3$, structure 0=21200

FeS, electron-ordering transition at ≅ 140°C 2=12691
Fe_7Se_8, temp. variation, neutron diffn. meas. 4=28816
$FeSiO_4$, in 30°K by neutron diffn. 4=29102
$FeSn_2$, antiferromagnetic temp. from Mössbauer spectra 4=7300
$x FeTiO_3(1-x)Fe_2O_3$, hematite. Curie point detm. 3=1098
$FeTiO_3$—Fe_2O_3, reverse thermoremanent 3=13255
Fe—V, initial suscept. just above Curie temp. 4=13186
Fe_2VO_4 at 275°K and FeV_2O_4 at 70°K 2=12697
Ga, Curie temp. variation with pressure 4=28806

Magnetic properties of substances—contd
transitions—contd
Gd, with compensation points, magnetic transformations, low-temp. 1=20122
Gd, with compensation points, mag. transformations, low-temp. 2=23680
Gd, Curie point, rel. to press. 2=12753
Gd, Curie temperature 3=17022
Gd, ferro—paramagnetic, from thermal conductivity 4=12661
Gd, 4°-375°K, rel. to elec. resist. meas. 4=10027
Gd garnets, investigation near Curie pt. 1=10172
Gd, mag. and X-ray diffr. exam. 4=13180
Gd, ordering, rel. to lattice parameters 3=15444
$GdCl_3$, Curie pt., specific heat discontinuity 4=17363
Gd—Dy alloys, spiral struct. between Curie and Neel points 4=13110
Gd—Y alloys, paramag. Curie point 4=28778
Ho, ferromagnetic—antiferromagnetic, crit. fld. meas. 3=17022
Ho, high field effects, and internal fields 4=13109
Ho, ordering, rel. to lattice parameters 3=15444
HoP 4=28773
Ho—Y solid solns., rel. to temp. and composn. 4=1808
$Ho_{5.04}Pd_{1.96}$, para- to ferro- , below 27°K 4=13220
In Heusler alloy, Curie temp. change by hydrostatic pres. 3=11026
$KFeS_2$, Curie point meas. 3=12894
$KMnF_3$ 1=12525
$KMnF_3$, crystallographic study 1=2464
Li, with compensation points, magnetic transformations, low-temp. 1=20122
Li ferrite–chromites, transformations, low temp. 1=20130
Li ferrite–chromites, transformations, low-temp. 2=23681
$LiCuCl_3.2H_2O$ 1=19716
$Li_{0.1}Mn_{0.9}Se$, ferro—antiferromag., theory 4=26019
$LiMnPO_4$, paramag—antiferromag. 3=18151
Li_xMn_{1-x} Se, neutron diffr. study 1=2467
Mn cpds., "crystalline ionicity" and mag. coupling 2=3807
Mn ferrite, Curie pt., conduction process anomaly 4=17492
Mn–Al, ferromag. π, ϵ and β phases 2=21541
Mn—Al—Cu alloy, ferromag. phase 1=14690
MnAs, to ferromag., first-order 3=13226
MnAs, first-order transition 3=15753
$MnBr_2 . 4H_2O$, ordered state 1.2°-20°K, spectral study 4=4261
$MnCl_2$, liq. He temps., rel. to specific heat 3=2731
$MnCl_2 . 4H_2O$, magnetic phase transitions 0=10250
$MnCl_2.4H_2O$, at 1.60°K, mag. entropy change 1=12356
$MnCl_2 . 4H_2O$, ordered state 1.2°-20°K, spectral study 4=4261
$MnCl_2.4H_2O$, para-antiferromag. transition 1=17417
$MnCr_2O_4$ 2=12671
$Mn_{1.9}Cr_{0.1}Sb$, antiferromagnetic—ferrimagnetic, meas. 3=17022
$Mn_{2-x}Cr_xSb$, associated changes in elec. props. 4=1617
$Mn_{2-x}Cr_x Sb$, ferrimag—antiferromag. 3=13282
$Mn_{2-x}Cr_xSb$, ferrimag.—antiferromag., mech. 4=17661
Mn—Cu alloys, susceptibility rel. to temp. 3=3081
Mn—Cu, antiferromagnetic, from specific heat, Mn rich 4=13270
MnF_2, Néel temp. from thermal expansion anomaly 0=1564
MnF_2 —ZnF_2, Néel temp by n.m.r. 3=1055
Mn $Fe_{2-x}Cr_xO_4$ ($0 \leq x \leq 2$) Curie temp. 4=30721
$Mn_{1+x}Fe_{2-x}O_{4+y}$, Curie temp. and saturation mag. moment 0=11888
Mn_5Ge_3, Curie point, rel. to press. 2=12753
$MnHPO_4.3H_2O$, no anomaly in spec. ht. and proton resonance 1=14179
MnHg, -75°C, due to crystal distortion 3=6860
Mn_3O_4, ferrimag. at 43°K, crystal struct. change search 4=2906
MnO_2, MnF_2, lattice constants near Néel temp. 1=20545
MnP, antiferro-ferro, 50°K, calc. 4=12683
MnP, 50°K transition to metamagnetic state 3=15735
MnP, 4°-50°K meas. 4=28819
MnRh ordered alloy, para—antiferromag. ~~rean~~ transition 3=15752
$MnSO_4.4H_2O$, no anomaly in spec. ht. and proton resonance 1=14179
Mn_2Sb, antiferro—ferri, first-order 3=1026

Magnetic properties of substances—contd
transitions—contd
Mn$_2$Sb compositions, ferrimag.–antiferrimag. ordering 2=12735
Mn$_2$Sb, Cr-modified, antiferromag.–ferrimag. transition 0=11916
MnSe$_2$, temp. var., neutron diffn. meas. 4=28822
MnSn$_2$, 73°K transition 3=15754
MnSn$_2$, susceptibility decrease at 73°K 1=11460
MnSn$_2$, temp. var., neutron diffn. meas. 4=28822
MnTe, antiferromagnetic, $K_{\alpha 1,2}$ X-ray lines of Mn, shape and width 4=15662
MnTe, antiferromagnetic, rel. to X-ray absorption spectrum 1=6218
MnTe$_2$ powder, neutron diffraction analysis, rel. to temp. 3=5019
MnV$_2$O$_4$ 2=12671
Mn–Zn ferrite, Curie temp. rel. to press. 4=26340
MnZn$_3$, -125°C, due to crystal distortion 3=6860
Mo–Re alloys, supercond. 4=18586
Nd, 1.6-20°K, neutron diffr. exam. 4=13273
Ni films, Curie temp. from elec. resist. 4=26320
Ni, susceptibility at γ/d and melting point 3=8654
Ni thin lavers. Curie pt. 3=1077
NiI$_2$. 6NH$_3$, e.s.r. study 1=10179
NiS, para–antiferromagnetic, neutron diffr. study 3=15748
Pd alloys with Co, Fe, Mn, Ni 3=992
Pt alloys with Co, Fe, Mn and Ni 3=992
PuC, at 100°K 4=28416
ScFeO$_3$, transformation at 7°K 2=4424
Sm, 155°K 2=8606
Sn alloys, superconductivity, a. c. hysteresis 4=18611
Tb, ferromag—antiferromag., hysteresis props. 4=15646
Tb$_2$C$_3$, rel. to sp. ht. anomaly in Tb 2=21346
TbP 4=28773
Tb$_{5.1}$Pd$_{1.9}$, para- to ferro-, below 62°K 4=13220
Tb—Y solid solns., rel. to temp. and composn. 4=1808
TiCl$_3$ 1=14671
Tm 3=25507
Tm, ordering, neutron diffr. study 2=12663
TmH$_{2-3}$, Néel point 3=25507
V, antiferromag., rel. to thermoelec. 3=13140
Y garnets, investigation near Curie pt. 1=10172
YFe garnet, Curie temp. rel. to Ga and In substitutions 3=1048
YFe garnet, Sb^{5+} substituted for Fe^{3+}, Curie temp. 4=26344
Y$_3$In$_X$Fe$_{5-x}$O$_{12}$, $(x < 0.5)$, Curie temp. rel. to x 3=20800

cores with rectangular hysteresis loops, cyclic magnetization, optimal law 4=10260
crystal rod, demagnetizing field, domain structure 0=13790

Magnetization process—contd
cubic crystals,rotation processes,hysteresis 4=26287
cubic ferromag. crystals, spontaneous, effect of impurities 0=11835
cubic ferromagnetics, spontaneous mag., calc. 2=6658
Cupron wire, 4.2° to 57.5°K 4=15643
cylinder, infinite ferromagnetic, mag. curves 1=17953
cylinder, plate, for periodic magnetization 4=19153
deformed anisotropic media, magnetization eqn. of motion 3=15774
demagnetization, adiabatic, apparatus for temps.down to 0.17°K 1=10632
demagnetization, adiabatic, use in low-temp. prod. 0=10857
demagnetization by const. and variable fields 2=18902
demagnetization, effect on spin-wave resonance 1=20172
demagnetization kinetics, Bloch wall motion 0=13801
demagnetization, shock-induced, detection 1=14937
demagnetizing energy, uniformly magnetized cube 3=9899
demagnetizing factor rel. to magnetization and susceptibility 3=11064
demagnetizing functions, measurement, for cylindrical rods 1=3033
detection of gravitational effect of spin 0=10564
disaccommodation, in h.f. field 0=13785
"dissymetric" cycles in Rayleigh region 1=20076
domain boundary motion, statistical dynamics 1=7752
domain structure behaviour during magnetization 3=25531
domain structure, review 0=13784
domain wall motion, dynamics 3=15797
domain wall relaxation in YFe garnet 0=3092
domains, reversible wall motions, activation fields, distrib. functions 0=6230
effect of core current on magnetic materials 1=6337
ellipsoids, in strong homogeneous fields 4=1820
even effects, anisotropy, in orthorhombic and rhombohedral lattices 3=23166
ferrimag. resonance absorption, size effects, polycrystalline ferrites and garnets 0=21066
ferrimagnetic materials 1=3915
in ferrimagnetics, antiferromagnetics and ferromag. films, with arbitrary spin 0=3100
ferrites, anhysteric magnetization curves 1=7764
ferrites, arbitrary cyclic magnetization 0=6242
ferrite, cyclic, Barkhausen noise spectrum 4=13151
ferrite, demagnetization, mag hysteresis role 3=8692
ferrites, effect of uniaxial compression 0=21055
ferrites, hexagonal, internal anisotropy field 2=14804
ferrites, hysteresis loops rel. to creep 3=8688
ferrites, hysteresis loops, creep meas. 2=10670
ferrites, kπ domain walls 0=6239
ferrites, mag. flux reversal, interaction with high-power microwave losses 0=18200
ferrites, mag. reversal, nucleation model 2=10675
ferrites, magnetization wave produced by e.m. wave 3=4269
ferrite memory cores, history, effect on switching 3=15869
ferrite, memory cores, multipath, flux switching 3=15870
ferrites, memory effect 1=20124
ferrites, memory effect 2=10669
ferrites, near Curie point 2=14801
ferrites, planar, mag. anisotropy field 2=12748
ferrite, precession establishment at high power levels 4=7309
ferrites, rect. loop, domain wall behaviour 1=9040
ferrites, rotational magnetization reversal 3=15865
ferrites, spontaneous magnetization, elec. cond. anomaly 2=8294
ferrites, spontaneous sublattice 1=20121
ferrites, spontaneous, temp. depend., quantum mechanical theory 0=6226
ferrites, square-loop, demagnetizaton 1=10167
ferrites, square-loop hysteresis 4=10286
ferrites,"Square Loop", magnetization, irreversible change 1=9038
ferrites, square-loop, magnetization reversal 3=13275
ferrites, square-loops, partial switching 1=14733
ferrites, temp. and field depend. 1=7765
ferrites, Verneuil grown 0=6327
ferro and antiferromagnetism, coexistence in subst., thermodynamic theory 4=7242-3

Magnetization process—contd
ferromagnetic alloys, h.c.p. lattice, and atomic ordering 4=22965
ferromagnetic alloys, and ordering 4=29000
ferromagnets, anisotropy free energy, temp. depend. 0=11836
ferromagnet, Barkhausen noise intensity rel. to elastic stress, heat treatment and crystal structure 3=3104
ferromagnets, crystal dislocation effects 4=13145
ferromag. cryst. in external mag. field 2=21309-11
ferromagnetic crystal ellipsoid, Green's function determ. 4=4341
ferromagnetic crystal, partition function 0=8038
ferromagnetic crystals, anisotropic 0=10116
ferromagnetic crystals, anisotropy, theory 0=16132
ferromagnetics, domain structure, powder figure and Kerr effect studies 0=1795
ferromag. films, domain struct. rel. to reversal 2=21322
ferromag. layers, domain walls interactions 2=12768
ferromagnetic domains, interactions: tilting and creeping 0=13791-2
ferromagnetics, effect of mech. deform. 3=13247
ferromagnetics, equns. 4=30710
ferromagnetic films, coercivity rel. to structure, review 4=22976
ferromagnetic films, coherent magnetization rotations 0=11856
ferromagnetic films, hysteresis meas. 3=24424
ferromagnetic films, impulsive magnetization 3=15848
ferromagnetic films, rotational reversal, isolation 0=1790
ferromagnetic films,79 NMA alloy,reversal process 4=26328
ferromagnetic films,spontaneous magnetization 3=25533
ferromagnetic films, switching, high field 3=15825
ferromagnetic hysteresis, theory 0=13780
ferromagnet, low-temperature expansions 4=22962
ferromagnetics, at low temp., fluctuating molec. field 0=4477
ferromagnetics, magnetic symmetry 0=11820
ferromagnetics, rel. magnetization as function of temp. and appl. field, new derivation 4=4337
ferromagnetic, using magnetometer 4=26301
ferromagnetic materials, switching coefficients, rel. to limiting frequency 0=16140
ferrromagnetic metals, spontaneous low-temp., theory 4=22964
ferromagnetic monocrystals, internal stresses 0=8046
ferromagnetic—non-ferromagnetic mixtures, mag. anisotropy 1=6277
ferromagnetic particles, elongated, coercive force and rotational hysteresis 0=13783
ferromagnetics, periodic domain structures, mag. vector orientation 0=3034
ferromagnets, permeability and hysteresis, diffusion effects 4=13153
ferromag. polycryst., effect of superposed ansisotropy 2=12763
in ferromag. powders, coherent and incoherent 1=6311
ferromagnetic powders, saturation, investigation 4=7250
ferromagnets, pulse magnetization, rel. to sound effects 4=10264
ferromagnets, rate of formation of magnetic induction, demag. effect meas. 4=13154
ferromagnetic rotl. hysteresis 3=4239
ferromagnetics, saturation approach law 4=13148
ferromagnetic single crystals, field and elastic force depend. 0=11813
ferromagnetic single crystals, laws of magnetization 0=10128
ferromagnetic small particles, spontaneous, theory 3=3113
ferromagnetic spheres, first approx. to magnetization curling 4=13149
ferromagnetic thin films 3=8674
ferromag. thin films, spontaneous, and coercive force, meas. 3=6710
ferromag. thin films, spontaneous mag., theories 2=10658
ferromagnetic thin layers at low temp., influence of mag. field on elec. res. 0=9937
ferromagnetic transformations 0=13741
ferromagnets,with 2 mag.sublattices,arbitrary spin in sites 4=26289

Magnetization process—contd
- ferromagnetics, uniaxial fields perpendicular to preferred direction and parallel to Bloch walls, calc. 3=15796
- ferromagneto internal field for periodic magnetization 4=19153
- ferromagneto, meas., commutation ballistic method, transient effects 4=5738
- films, coercive force rel. to thickness and roughness 2=14782
- films, ferromag., coercive force variations 2=12779
- films, ferromag., freq. var., from Kerr magneto optical effect 3=25536
- films, high-speed magnetization reversal, direct obs. method 3=14711
- films, hypercritical hysteresis loops, heat treatment 4=13156
- films, hysteresis, permanent magnet model 4=26298
- films, magnetostatically coupled, calc. 3=13258
- films, pulse mag. reversal, effect of nonuniformity 4=13155
- films, reversal, high speed meas. 0=12666
- films, reversal loop, with alternating plane stresses 4=15641
- films, reversible and irreversible processes, rotation, displacement 1=3904
- films, uniaxial, hysteresis loops 2=21316
- films, wave theory of coercive force 2=21329
- fine particle remanence, ang. variations in field 2=12725
- flat bodies, in curved mag. field 0=1794
- 4 ferrites, reversals, cyclic, noise, 77° to 292°K 4=30719
- g-factor determs., ferromag. materials 2=12760
- garnets, hybrid, microwave materials 2=12747
- garnets hysteresis loop, "dynamic squareness" 4=4343
- grain-oriented sheets, Bloch walls, dynamic behaviour 1=9026
- haematite, coercivity rel. to anisotropy 4=10276
- "hard" magnetic materials 0=16134
- Heisenberg ferromagnet, const. coupling approx., thermodynamical fluctuation decay 3=23145
- Heisenberg ferromagnet, isotropic, magnetization direction 4=30709
- Heisenberg ferromag. magnetization, thermodynam. flucts., decay in const. coupling approx. 4=13150
- helical spin configuration 1=6251
- honeycomb domain structure during demagnetization 1=20089
- hysteresis, analytic function, generation 1=6287
- hysteresis loop analysis, expt. effects 4=8891
- hysteresis loop, effect of diffused foreign atoms 4=17634
- hysteresis loops, asymm., effect of tension 3=6705
- hysteresis losses along open transformations 0=13781
- hysteresis and other props., variational theory 0=8043
- hysteresis, square loops of ferrites 1=6360
- increase rel. to high fields 3=6706
- initial magnetization and hysteresis cycles rel. to temp. 3=1088
- initial susceptibility relations 3=13225
- Invar, anisotropy energy, temp. and field depend. 2=23648
- invar, shock-induced demagnetization, detection 1=14937
- Ising lattice, combinatorial factor approximation 4=29536
- in Ising's two-dimensional model 2=18894
- isolated and adiabatic susceptibilities, deviations 1=8069
- isothermal initial magnetization anomalies 1=1212
- isotropic materials, const. field rotational cycles, Preisach model 4=1819
- little particles, spontaneous on extended mol. field theory 2=14774
- magnetic after-effect 0=13755
- magnetic analysis from magnetization curve 1=6250
- magnetic viscosity and annealing in magnetic fields 1=1216
- magnetite, magnetic viscosity 0=18184
- magnetite, magnetization, temp. hysteresis 4=13193
- magnetite, orthorhom. and cubic, characterization expansions, −155°C 4=26312
- magnetization fluctuations in substs. having several magnetic ion types 0=11802
- rel. to magnetization stability 3=11060
- magnetoelastic media, eqns of motion 4=11136

Magnetization process—contd
- magnets, permanent 0=5376
- materials with general texture, reciprocal pole figure calc. 2=23628
- memory wires, "distrib" thresholds 3=15849
- metals and alloys, saturation, low-temp. 4=10262
- metals, homogeneous, coercivity, theory 1=20080
- meteorites, chondritic, thermal demagnetization 1=18061
- Mumetal, using a.c. current 2=9651
- mumetal, ferromagnetic after-effect 0=8042
- nonellipsoidal samples, demagnetizing field, inhomogeneous, sum rule 2=18903
- non-metallic ferromagnets, reversal, rel. to domain motions 4=13146
- nucleation field in ferromag. plate, calc. 1=20099
- nucleation-field theory, surface flaw effects 2=23658
- paramagnetic term, parasitic, one-dim. theory 3=25511
- particles with cubic anisotropy, magnetization curves 1=6312
- Permalloy, effect of dislocations 0=3063
- Permalloy films, Barkhausen pulses duration 4=13198
- Permalloy films, rel. to dispersed anisotropy 3=15811
- Permalloy films, effect of surface roughness 3=15840
- Permalloy films, ferromag. reson. data 2=10685
- Permalloy films, flux reversal by Neel wall motion 3=15845
- Permalloy films, free and forced oscillations 0=18194
- Permalloy, films, hysteresis 3=15837
- Permalloy films, hysteresis loops, reverse magnetization 2=8637
- Permalloy films, magnetoresistance effect in magnetization reversal 1=14722
- Permalloy films, quasistatic magnetization 2=23666
- Permalloy films, reversal 4=23002
- Permalloy films, reversal along hard direction 4=10283
- Permalloy films, reversal and partial rotation 1=14721
- Permalloy films, reversal time and anisotropy variations 4=28826
- Permalloy films, sputtered, coercive force variations 2=12660
- permalloy films, torque, angular dependence 3=1071
- Permalloy films, transverse 3=18087
- Permalloy, hysteresis loops, effect of neutron irradiation 0=3007
- permalloy, magnetization curve and torque angular dependence 1=14723
- Permalloy, magnetization, incoherent rotation, switching signals and domain pictures 4=28799
- Permalloy (94%Ni) and pure Ni, differences rel. to stress & temp. 3=1142
- Permalloy thin films, hysteresis 2=10662
- permanent effects due to repeated impacts 3=3099
- permeability meas. at radio frequencies 4=30711
- Perminvar, domain patterns in thin films 1=10156
- Perminvar, mechanism theory 0=13782
- phase transformations, magnetometer 2=1554
- polarizability, of conducting circular cylinder 1=5528
- prism, infinitely long, nucleation fields 2=23659
- pulse magnetization, aperiodic, rel. to sound effects 4=10264
- pyrrhotite, TRM and IRM, field depend. 3=11063
- rare earth ions, in gallates with garnet struct., magnetization and susceptibility curves at low temps. 4=28763
- rare-earth metals, saturation rel. to temp. 3=25525
- rare earth orthoferrites 0=18202
- recording tapes, anhysteretic remanence 0=21052
- recording tapes, particle interaction 0=1792
- rect. bar, eddy current losses, for single domain, rigorous soln. 0=10143
- refrigeration by adiabatic demag., theory 3=14431
- remanent magnetization at partial saturation 2=21314
- reversal nucleation around dislocations, model 3=5009
- reversal processes, thin films, electron microscope obs. 2=12752
- reversal of spin vectors in magnetically charged 180° domain walls 0=3027
- rocks, ferromag., time effect 4=26876
- rocks, igneous, demagnetization in altern. fields 1=21107
- rocks, thermoremanent mag. after cooling under stress 1=21108-9
- "rotational" coercivity of isotropic ferromagnetics 3=8667
- saturation approach, effect of deformation 3=8669

Magnetization process—contd
saturation magnetization rel. to plastic deformation 4=10261
screw spin struct. at absolute zero 2=14761
79NM alloy, permeability, max., differential, rel. to a.c. amplitude 4=17644
single-domain curves for general ellipsoid 2=16904
single-domain particle aggregates, anhysteretic magnetization characteristic 1=6313
single domain particles, thermal agitation 4=26297
soft materials, losses meas., calorimetric methods 2=3127
Soviet research during recent years 0=13741
spin screw system 3=976
spin wave calc. for low temps. 0=13838
spinel ferrites, Barkhausen effect 4=1841
spontaneous intensity rel. to temp., at low temp. 4=15637
spontaneous mag., effect of lattice oscill. 3=1131
spontaneous mag. near Curie point, effect of lattice oscill. 3=1132
steel, cast C, effect of heat treatment 0=4485
steel, hysteresis anisotropy, effect of stretching 3=20578
steel, magnetization, paramagnetic and ferromagnetic components 4=28779
steel, stressed wires study 0=679
steel, Type E310, on heat treatment, mag., effect of field 3=20584
structural current density method analysis 4=10259
superconducting alloys, near 2nd critical field 3=24141
superconducting sheets, high-field curves 4=22942
superconductors, hard, size effects, and crystal imperfections, theory 3=19099
superconductors, hard, theory 4=18554
superposition of thermal-fluctuation after-effect and creeping 1=7748
surface effect for nonsinusoidal field 3=18078
system with 2 kinds of mag. moment, partial magnetization, eqns. of motion 0=10219
temperature variation, as first-order phase transition 2=8618
tension changes, effects on magnetization 2=12699
thermal cycling effects on irreversible magnetization changes 1=1218
thermomagnetic meas. in weak fields 0=13787
thermoremanent, inversed type, production 3=11065
thin films, high-field reversal, theory 2=21324
thin films, saturation, combined with thickness meas. 4=3084
thin films, slow processes 1=1230
torsion pendulum with ferromag. suspension, in a.c. mag. field 4=19160
transverse decay time meas., Carr-Purcell expt. modification 4=26295
twistors, demagnetization of bits 1=7124
in unmagnetized state, due to temp. changes 4=1825
viscous, rel. to theory of single-domain grains 3=3117
Al—Fe alloys, existence of 2 Curie points, anomalous coercive force 1=1213
Al-Fe alloys, at high temp., anomalous behaviour 0=13779
Ag—Mn alloy, ferromag.—antiferromag. model 3=20585
Au-Co alloy, rel. to precipitation 0=21242
Au—Mn alloy, forced magnetization rel. to temp. and field, meas. near Curie temp. 4=26340
AuMn, antiferromag. alignment in t_2 phase 2=23690
Ba ferrite, different dynamic mechanisms 4=28832
Ba ferrite powders, sat. magnetization rel. to grinding and annealing 4=26334
$BaCo_xFe_{18-x}O_{27}$, $(0<x<1.5)$, single crystals, easiest magnetization direction changes 4=26336
$BaFe_{12}O_{19}$, monocrystal plates, domain configuration 0=8049
$BaFe_{12}O_{19}$, nucleation around dislocations, model 3=5009
$BaFe_{12}O_{19}$, remanent domain struct. 2=14779
$BaO.6Fe_2O_3$, magnetization rel. to temp. 4=12591
$BaTiO_3$ crystals, Barkhausen pulses generation 1=20081
Co, in external mag. field, nuclear reson. 2=12831
Co ferrites, domain wall reson., permeability dispersion 1=20092
Co film, slow mag. reversals, domain study 2=21327
Co film, spin-wave reson. and saturation magnetization 2=18912
Co films, magnetization reversal, Kerr effect study 1=20100

Magnetization process—contd
Co films, uniaxial anisotropy 1=3894
Co particles in CoO shells, asymmetrical mag. curve 0=1785
Co, spontaneous, temp. dependence 1=14695
Co titanate, effect of temp., mag. field 2=6676
Co in Co—Cu alloy, coercivity rel. to temp., saturation remanence 4=13173
Co and Mn-Bi powders, anisotropy of magnetization curves and hysteresis loop 0=3002
$CoCO_3$, hexagonal anisotropy and magnetization curves 3=18112
$CoCO_3$, weak ferromagnetism, 1.3-300°K 0=21039
Co—Cu, dilute alloys, hysteresis 3=5028
$CoFe_2O_4$, films, hysteresis 3=15655
$CoFe_2O_4$, heat changes rel. to magnetization 1=9035
$Co(H_2O)_6SiF_6$, adiabatic demagnetization 3=1059
$CoNH_4$-Tutton salt, demagnetization exper. below 1°K 0=13738
Cr-Fe-Ni alloys, mag. struct. rel. to hardness 2=2281
CrO_2 direction of easy magnetization 2=12689
Cr_2O_3, by elec. field, temp. depend. 1=20160
Cu ferrites, with large Barkhausen jumps 0=1805
Cu—Co alloys, blocking process by volume development 3=1096
Cu—Mn alloy, ferromag.—antiferromag. model 3=20585
Cu_2MnAl, saturation magnetization meas. for determ. of mag. moment distrib. 4=15644
Cu-Ni alloys, saturation, low temp. meas. 0=13757
Cu—Ni—Fe alloys, spontaneous remanent mag. 4=28805
Dy ethyl sulphate, demagnetization expts. 3=1056
Dy, ferromag.—antiferromag., hysteresis props. 4=15646
Dy, in strong field, absolute saturation 0=13776
Fe alloys, seven, interaction energies of solute atoms 2=8629
Fe, anisotropy, low-temp. depend. 0=1784
Fe base alloys, single-crystal anisotropy and magnetostriction 0=10126
Fe, coercive force resulting from domain boundary interact. with large nonmagnetic inclusions 4=26305
Fe, films 2=8642
Fe films, Barkhausen effect rel. to nucleation 2=14783
Fe film, Barkhausen jump duration investigation 2=21323
Fe films, coercive field, hysteresis 3=15810
Fe films, easy axis reversal 3=11087
Fe films, 1500-2000A, large Barkhausen jumps 3=11080
Fe films, jumps, magnitude distrib. 3=20599
Fe films, rel. to thickness 3=3109
iron garnets, anisotropy from rare-earth ions 2=12716
Fe, hysteresis loops, eddy-current broadening 3=15790
Fe, kinetics, magnetomechanical method of study 0=11873
Fe losses in elliptically rotating fields 2=14778
Fe, mag. field calc. 0=13778
Fe, mag. viscosity, due to C atoms in dislocations 0=1803
Fe, magnetization fluctuation dynamics near Curie pt. 0=13804
Fe, magnetothermal effects 0=4487
Fe monocrystals, electron beam studies 1=1215
Fe, neutron irradiated, diffusion magnetic viscosity 1=1227
Fe, one-domain particles, coercive force and remanence 3=11088
Fe particles, in Hg, coercivity, effect of other metals 3=15773
Fe particles <100 A diam., saturation magnetization 1=6308
Fe plates, anisotropic, B and H field vectors 4=28807
Fe polycrystalline, coercive force recovery after cold working 4=13152
Fe, polycrystalline, near saturation, meas. 0=13807
Fe, saturation induction, increase by H absorption 3=1145
Fe, spontaneous moment variation, 1.4° to 5°K 3=15792
Fe and steel wires, Barkhausen effect, circular 4=13192
Fe, stressed wires study 0=679
Fe thin films, saturation mag., Curie temp. 2=23665
Fe, 25-120 μ films 2=8635
Fe whiskers, magnetization reversal nucleation rel. to surface defects 4=7261
Fe wire, in a.c. fields 1=6282
Fe-Al, demagnetization rel. to ferromag. props. 2=10648

Magnetization process—contd
FeCo ferrites, magnetic annealing 0=10174
Fe—Co, one-domain particles, coercive force and remanence 3=11088
Fe-Co-Cr alloy, elastic const., anomaly 2=23732
Fe-Co-V, mag. hard, remanence model 2=14773
Fe-Mn-Ti, mag. hard, remanence model 2=14773
Fe-Ni alloy, coercive force, temp. var. 2=737
Fe—Ni alloys, effect of uniaxial tension and compression 3=3102
Fe—Ni alloys, initial mag. susceptibility 1=6292
Fe—Ni alloys, magnetization under hydrostatic pressure 1=5065
Fe—Ni alloys, rel. to neutron irrad. 4=28812
Fe—Ni alloys, saturation magnetization, under isotropic compression at low temp. 0=13775
Fe-Ni circular films, coercive force and domain structure, edge effects 0=11863
Fe—Ni, cyclic, Barkhausen noise spectrum 4=13151
Fe-Ni films, domain struct. obs. 2=16913
Fe-Ni films, nucleation, wall motion and domain shapes 2=12774
Fe—Ni, ordered, easy mag. axis 3=8900
Fe—Ni, saturation rel. to volumetric compression 3=8668
Fe-Ni-Co alloys 1=7760
Fe-Ni-Cr alloy, elastic const., anomaly 2=23732
Fe—Ni—Mo alloys, saturation magnetization rel. to Mo content 4=17737
Fe—Ni—Mo films, 1500-2000A, large Barkhausen jumps 3=11080
ϵ Fe nitride, bulk magnetization 4=26311
Fe oxides, saturation magnetization reduction by neutron irradiation 0=3008
γ-Fe_2O_3 fine particles for recording media, coercivity and remanance curves 3=1091
α-Fe_2O_3, memory phenomenon mechanism 4=4378
Fe_2O_3, Morin transition down to —40°C 2=8633
γ-Fe_2O_3 particles in nonmag. matrix, remanence 2=14772
Fe_2O_3, TRM and IRM, field depend. 3=11063
Fe_3O_4, easy magnetization axis 1=20085
Fe_3O_4, TRM and IRM, field depend. 3=11063
Fe-Rh alloy, magnetization 4=26314
FeS, electron ordering transition at ≅140°C 2=12691
Fe—Si, cyclic, Barkhausen noise spectrum 4=13151
Fe—Si, diffusion after-effect 3=8660
Fe-Si, domain structure dynamics 0=10145
Fe-Si, ferromagnetic resonance study 0=11840
Fe—Si(3%), Néel theory, temp. var. 3=20586
Fe—Si sheets, reptation and bascule effects 3=23158
Fe—Si single crystal, rotational hysteresis loss 4=15648
Fe—3% Si, with C, initial permeability, frequency dependence, -70° to 180° C 4=4361
Fe-Si-Co, coercive field strengths 4=7262
Fe-Si-Cr, coercive field strengths 4=7262
Ga ferrite garnet, in pulsed fields 4=4373
Gd, 140 kOe, rel. to molecular field model 4=4357
$GdCl_3$, magnetocaloric effects 3=15803
H atoms adsorbed on ferromagnetics 1=13970
Ho, 1.3° to 300°K 2=21098
In—2½% Bi. superconductor rel. to field strength 3=3954
$K_3Fe(CN)_6$ adiabatic demagnetization 1=20224
$La_2O_3.Fe_2O_3$, hysteresis, effect of temp. 0=13834
lithium ferrite-aluminate, saturation magnetization rel. to temp. 4=15651
Li ferrite-chromite, hysteresis, 20° C to Curie pt. 4=4383
lithium ferrite-gallate, saturation magnetization rel. to temp. 4=15651
Li ferrite ($LiFe_5O_8$), h.f. processes 1=12538
Li ferrite, square-loop props., effect of grain size 3=15876
$LiFe_5O_8$, sublattice mag. by neutron diffn. 4=28840
LiNiZn ferrites, square hysteresis loops 3=15866
LuFe garnet, square hysteresis loops 3=15868
$MO.Mn_2O_3$ forms, magnetization curves 0=3097
$MO.Mn_2O_3$ (M = Mn, Co, Zn, Mg), triangular moment arrangement 0=4499
Mg—Fe ferrite containing Co, hysteresis loops, associated with Perminvar 4=20556
$MgFe_{(2-a)}Mn_aO_4$, spontaneous magnetization 1=17956
$MgFe_2O_4$, TRM and IRM, field depend. 3=11063
MgMn ferrites, after-effect due to electron diffusion 0=11892

Magnetization process—contd
Mg—Mn ferrite cores, partial switching 0=11006
Mg—Mn ferrite cores, square-loop, flux reversal 3=1084
MgMn ferrites domain wall motion inhibition 3=15872
MgMn ferrites, hysteresis, effect of mag. after-effects 2=6674
MgMn ferrite, hysteresis loops, rectangularity 3=13272
MgMn ferrites, "Perminvar" effect 0=3078
MgMn ferrites, squareness of hysteresis loops 0=13823
Mn ferrites, hysteresis loop rectangularity, crystalline anisotropy 0=11886
Mn ferrite, impulse behaviour, effect of induced anisotropy 3=15893
Mn and Ni ferrites, containing Co, rel. to anisotropy and mag. orientation 4=10287
MnBi, mag. switching rel. to particle size 3=13251
MnBi, microcryst. particles, reversal processes 3=8657
MnBi, nucleation around dislocations, model 3=5009
$MnBr_2.4H_2O$, adiabatic magnetization, cooling effect 3=15908
Mn-Fe ferrites, low temp. anisotropy 2=12693
Mn—Fe ferrite, rectangular hysteresis by heat treatment 4=17662
$MnFe_{2-x}Al_xO_4$ $(0 \leqslant x \leqslant 2)$, saturation magnetization 4=30721
$MnFe_{2-x}Cr_xO_4$ $(0 \leqslant x \leqslant 2)$, saturation magnetization 4=30721
$Mn_{1+x}Fe_{2-x}O_4$, hysteresis loop 1=17955
$Mn_xFe_{3-x}O_{4+\gamma}$ permeability and saturation magnetization 2=746
$Mn_{1+x}Fe_{2-x}O_{4+v}$, hysteresis loop, rectangularity 0=3077
Mn_5Ge_3, anomalies 3=15775
MnMg ferrite, approach to saturation 2=21336
MnMg ferrite, hysteresis loop rectangularity 1=20133
MnMg ferrites, hysteresis loop rectangularity, temp. depend. 0=6240
MnMg ferrites, internal demagnetization, hysteresis loop rectangularity 0=6241
Mn—Mg ferrites, rect. hysteresis loop, rel. to composn. 4=15654
$MnNH_4$-Tutton salt, demagnetization exper. below 1°K 0=13738
MnO, MnS, NiO, anisotropies 0=8071
MnP, near transformation temp. 0=10106
MnSb alloy 1=17622
$MnSiF_6.6H_2O$, adiabatic demagnetization 0=10096
Mn—Zn ferrite, forced magnetization rel. to temp. and field, meas. near Curie temp. 4=26340
Mn Zn ferrites, all known hysteresis loops 1=7767
Mo-Permalloy films, Barkhausen effect 2=16905
$NaNiF_3$, weak ferromagnetism 1=14702
Nb, supercond. 4=18589
Nb, superconducting, magnetization curves rel. to appl. fields, hysteresis loops 4=16353
Nb, rel. to superconductivity 3=11066
Nb wire, supercond., curves and hysteresis 4=27423
Nb^{3+} in gallate garnets, high temp. var., calc. 4=20517
Nb_3Al, hysteresis loops, rel. to superconductivity 3=14455
Nb—Sn, type II superconductors, reversible magnetization curves 4=5525
Nb_3Sn, hysteresis loops, rel. to superconductivity 3=14455
Nb—Zr superconducting alloy, magnetization rel. to mag. field of solenoid of this alloy 4=11748
Nb—Zr, superconducting, magnetization and remanence rel. to mag. field 4=16365
Nd, in strong field, absolute saturation 0=13776
Ni alloys, curves after demag., stress effects 3=11061
Ni, Barkhausen discontinuities for thermal idealization 4=26292
Ni, Bloch walls, motion in mag. and ultrasonic fields 0=16136
Ni chromite, magnetization rel. to orientation 3=1011
Ni, coercive force, temp. var. after heat treatment 2=737
Ni, curves, calc. 1=10145
Ni ferrite, concomitant heat changes 0=6229
Ni ferrite, memory core, magnetization reversal 3=15874
Ni film charged with hydrogen, saturation magnetization meas. 2=6670
Ni films, coercivity, frequ. and temp. depend. 4=7280
Ni films, domain orientation, thickness depend. 1=10155
Ni films, stressed, transverse magnetization 0=3025
Ni films, superparamagnetic, magnetization axis 2=8602

Magnetization process—contd
- Ni films, rel. to temperature 3=15821
- Ni, influence of electrolytic charging of H 2=738
- Ni, initial suscept., var. deformation, temp. 4=22996
- Ni, jumps, measurement 3=8664
- Ni, low-temperature measurements 1=6275
- Ni, neutron irrad., ferromag. viscosity, relaxation time 0=18185
- Ni, polycrystalline, near saturation, meas. 0=13807
- Ni, rotational hysteresis, rel. to cold rolling and recrystallization 3=18076
- Ni, spontaneous mag., pyromag. test of spin wave theory 2=12684
- Ni, spontaneous moment variation, 1.4° to 5°K 3=15792
- Ni, stressed wires study 0=679
- Ni, superparamagnetic, temp. depend. of spontaneous magnetization 1=6307
- Ni, rel. to temp., orientation and deform. 2=18904
- Ni thin films 0=6235
- Ni thin films, magnetization, effect of uniaxial anisotropy 4=26319
- Ni, wall coercive force, influence of grain boundaries 4=30713
- Ni wire, in a.c. fields 1=6282
- Ni wire, anomalous susceptibility 1=20077
- Ni wire, Barkhausen pulses duration 4=13198
- Ni wires, thin, from magnetoresistance meas. 3=1087
- Ni—Cr alloys, 0°-300° K, up to 15 kOe 3=5010
- Ni—Cr wire, Barkhausen pulses duration 4=13198
- Ni–Cu alloys, rel. to elec. resistance 0=6074
- Ni—Cu alloys, 0°-300° K, up to 15 kOe 3=5010
- Ni–Cu alloys, spontaneous 0=1789
- $Ni_{1-x-y}Cu_xCo_yFe_2O_4$, line width and anisotropy constant 1=20075
- Ni—Fe alloys, Barkhausen noise freq. spectrum 4=22999
- Ni–Fe alloys with rect. hysteresis loops 0=6227
- Ni–Fe alloys, small-signal behaviour, domain wall model 3=25528
- Ni–Fe, anisotropy of change in elastic modulus 2=4230
- Ni–Fe ferrite, anisotropy 0=3082
- NiFe films 4=22973
- Ni–Fe films, domain struct. obs. 2=16913
- Ni–Fe films, hysteresis 4=26323
- Ni—Fe films, rel. to internal stresses 3=20595
- Ni(80%)–Fe(20%) films, reversal 3=1082
- Ni–Fe tape-wound cores, hysteresis loop meas. 0=10130
- Ni-Fe thin films, electron microscope observation 1=10163-4
- Ni–Fe thin films, reversal process observations using Kerr effect 0=13812
- Ni–Fe thin films, reversible rotation by Faraday effect 3=1079
- Ni–Fe thin films, switching by non-coherent rotation 3=1081
- Ni–Fe–Mo films, domain struct. obs. 2=16913
- (80%)Ni–(17%)Fe–(3%)Mo films, rel. to u.s. vibrations 4=22978
- $Ni_2Fe_2O_4$, films, hysteresis 3=15655
- $NiFe_2O_4$, nonstoichiometric, constricted hysteresis loop 3=1085
- $NiFe_2O_4-ZnFe_2O_4$ system, discontinuities 4=7291
- Ni—Mn alloys, 0°-300° K, up to 15 kOe 3=5010
- Ni—Mn, saturation rel. to volumetric compression 3=8668
- Ni_3Mn alloy, saturation magnetization, effect of ordering 4=28825
- Ni_3Mn disordered alloy, below 110°K 0=3017
- Ni_3Mn, temp. depend., antiferromag. exchange interaction 3=20583
- NiO–α-Fe_2O_3 mixtures, rel. to spinel formation 4=1971
- Ni–Zn ferrites 3=20336
- Ni–Zn ferrites, disaccommodation by small amplitude signals 4=28845
- NiZn ferrites, Fe-rich, with Co, "Perminvar" effect 0=10175
- Ni—Zn ferrites, hollow cylinders, effect of twisting moment 4=13249
- NiZn ferrites, intensity curves 0=678
- NiZn ferrite, irreversible stress effects in Raleigh region 3=8690
- NiZn ferrite, mag. annealing and complex permeability 2=8629
- Ni—Zn ferrites, permeability in polarizing fields 4=26341

Magnetization process—contd
- Ni—Zn—Cr ferrite, with CoO, spontaneous, -196° to 300°C 4=30722
- PbO. $6Fe_2O_3$ 0=675
- PbO. $6Fe_2O_3$, remagnetization nuclei, initial stages of formation 4=28818
- $Pr_2O_3.Fe_2O_3$, hysteresis, effect of temp. 0=13834
- Si-iron, rel. to field and external stresses 3=8663
- Si iron, reversible and irreversible processes 2=21307
- silicon iron, sheet form, magnetic struct. 2=23660
- silicon iron, single crystals, temperature magnetic hysteresis 1=10148
- Si–Fe, demagnetization losses, effect of impurities 1=6284
- Si-Fe, domain boundary movements, l.f. losses 2=14777
- Si–Fe, effect of a.c. demagnetization on domain structure 1=6295-6
- Si–Fe, high field, crystal imperfection effects 4=22992
- 3% Si–Fe, initial mag. curve, tension effects 3=25527
- Si–Fe, magnetothermal effects 0=4487
- Si–Fe, rotational hysteresis loss 0=8044
- Si–Fe single crystals 1=14701
- Sn and Pb thin supercond. films, magnetization patterns and hysteresis effects 2=9487
- Sr0.4.4Fe_2O_3.1.6Cr_2O_3, ferrite, anomalies 4=23022
- SrO.4.4Fe_2O_3.1.6Cr_2O_3, ferrite anomalies, -95° to 330.5°C 4=23022
- Tb, ferromag.–antiferromag., hysteresis props. 4=15646
- TiCo 0=1788
- TiFe, 9-110°K 0=1788
- TiNi 0=1788
- Tm, at low temp., in strong fields 0=11842
- $Tl_{1/2}La_{1/2}Fe_{12}O_{19}$, a new ferrite, meas. 4=7292
- V, electronic and nuclear polarization by slow neutron scattering 3=18057
- V_3Ga, hysteresis loops, rel. to superconductivity 3=14455
- V_3Si, hysteresis loops, rel. to superconductivity 3=14455
- V_3 Si, 6.1 × 10^{-3} cms, magnetization 3=8677
- Y ferrite garnet 0=11929
- yttrium ferrites, initial permeability, var. with freq., temp., garnet struct. 3=6723
- YFe ferrite, rotational magnetization reversal 3=15873
- YFe garnet, square hysteresis loops 3=15868
- $YFeO_3$, TRM and IRM, field depend. 3=11063
- YI garnet, TRM and IRM, field depend. 3=11063
- Yb^{3+} in gallate garnets, high temp. var., calc. 4=20517

Magnetization state
- Alcomax III, domain struct. 2=10656
- due to anisotropic local atomic configurations 0=2995
- anisotropic magnetization, magnitude and temp. depend. 1=20073
- anisotropy, Callen and Callen theory 2=4221
- anisotropy compensation point, apparent after effect anomaly 4=17635
- anisotropy of cubic crystals 0=13770

Cd, galvanomag. tensor in weak mag. fields 4=6793
Cd, Hall effect, magnetoresistance oscills. 4=6923
$CdAs_2$, n-type, galvanomagnetic props. 1=7645
CdS, photoelectromagnetic effects 2=650
CdS, in pulsed mag. fields, current-voltage saturation 4=12885
CdS single crystals, photomagnetoelectric effects 4=26038
Cr, elec. resist. rel. to ext. mag. field, 150°-310°K 4=6924
Cr_2O_3, anisotropy and origin 1=14369-70
Cr_2O_3, antiferromag., rel. to mag. cryst. classes 2=10636
Cr_2O_3, induced mag. and elec. moments 0=11907
Cr_2O_3, magnetization induced by elec. field 3=15739
Cr_2O_3, magnetization induced by elec. field 3=15740
Cr_2O_3, magnetoelectric effect in antiferromagnetics 1=1244
Cr_2O_3, origin 2=6418
Cr_2O_3 powder, after magnetoelec. annealing 3=13027
Cr_2O_3, spin—orbit statistical theory 3=4900
Cr_2O_3, temp. effects rel. to antiferromag. domains 2=2124
$(Cr_2O_3)_{0.8}\cdot(Al_2O_3)_{0.2}$, magnetization induced by elec. field 3=15740
CrTe, temp. and press. depend. 1=17619
Cr–Te–Se 1=17619
Cu, helicon oscillations det. 3=10728

Magnetoelectric effects—contd
Cu single crystals 1=17620
Cu, transverse-even voltage in high fields at 4·2°K, open orbit study 1=7623
Dy, negative effect peaks 2=21106
Fe films, evaporated in mag. fld., anisotropic elec. resistance 4=4120
Fe, γ-irrad. 2=8628
Fe–Cr, γ-irrad. 2=8628
Fe–Ni, γ-irrad. 2=8628
Fe–Si, transverse effects 0=11666
Ga, low-field, at 77°K 3=13044
GaAs, n-type 4=1601
germanium, anisotropic photomagnetic effect 0=2976
Ge bicrystal boundary layers 3=22927
Ge, Corbino effect 2=636
Ge, at high hydrostatic pressures 1=14372
Ge, injected plasma oscillations 3=25257
Ge, in long-wave radiation, 2-4°K 0=20898
Ge, n-type, anisotropy of galvanomagnetic effect 0=13816
Ge, n-type, even photomagnetoelectric effect 1=5030
Ge, n-type, photoelectromagnetic effect, anisotropy 1=5029
Ge, n-type, theory for various impurity concs. 4=17488
Ge, p-type, heavily doped, meas. 4=10056
Ge, photogalvanomag. effect in fields to 200 kOe 4=30663
Ge, photomagnetic effect, universal time constant 1=12460
Ge, photomagnetoelectric effect 0=20889
Ge, press. depend., 3.7-4.2°K 2=634
Ge, Ga-doped, rel. to valence band structure 4=1431
HgSe, rel. to defect mechanism for elec. props. 2=16728
HgSe, rel. to dispersion and effective mass 3=870
HgSe, galvano-thermomagnetic effects, transport integrals approach 4=30623
HgSe–HgTe, magnetothermoelectric effects 1=17753
HgTe, rel. to dispersion and effective mass 3=870
HgTe, 100-320°K 4=7087
Ho, negative effect peaks 2=21106
In, helicon oscillations det. 3=10728
InAs, Corbino effect 2=636
InAs, quantum oscills. 2=16683, 23246
InSb, Corbino effect 2=636
InSb, effect of magnetoconductivity discontinuities 1=7650
InSb, field and temp. depend. 1=14470
InSb films, Cu doped, p-type meas. 4=22718
InSb, in high mag. fields, rel. to doping 2=16727
InSb, n-type 3=17882
InSb, n-type, effects of r.f. radiation 2=14583
InSb, n-type, effects of r.f. radiation 3=6634
InSb, p-type, rel. to valence band and hole scatt. 3=22947
InSb, photoelectromagnetic noise 2=4036, 6466
InSb, photomagnetoelectric effect 0=20889
InSb, plastically deformed, temp. depend. 0=1858
InSb, quantum oscill. 2=16683, 23246
InSb : Te, n-type, resistance change anisotropy 1=14471
K, helicon wave—sound wave interaction 4=22549
Li chromite ferrite, temp. depend. 2=623
Mg, study of Fermi surface topology 4=6795
Mn alloys, Brillouin zone effects on elec. cond. 3=20554
α-Mn, mag. Brillouin zone effects 3=20555
Mo, in pulsed mag. field 4=2928
Na, oscillatory effect at 4°K 1=19837
$NaClO_3$ single crystal, shear vibr. due to h.f. mag. field 4=22784
Ni films, evaporated in mag. fld., anisotropic elec. resistance 4=4120
Ni, high field, and Fermi surface 4=12694
Ni, high-field meas. 3=25330
Ni, rel. to mag. domain structure 4=26317
Pb, rel. to Fermi surface model 1=17464
Pb, rel. to Fermi surface model 2=23177
PbS, photomagnetoelectric effect 0=20889
PbTe, magnetotunnelling 1=19893
Pd, in pulsed mag. field 4=2928
Pd single crystals, galvanomagnetic props. 4=26012
Re, in pulsed mag. field 4=2928
Sb, band structure 1=19833
Sb, pure and Sn-doped, analysis 3=8513

Magnetoelectric effects—contd
Sb, Shubnikov—de Haas, at liq. He temps., Fermi surface meas. 4=9904
Si, n-type 0=9969
Si, photomagnetoelectric effect 0=20889
Si—Fe elastically deformed single crystals, Hall effect 1=3721
Si—Fe single crystals, extraordinary Hall effect 1=3720-1
Sn, even potential difference rel. to mag. field 2=624
Sn, surface impedance at 3 Mc/s in mag. field 4=6916
SnTe, rel. to temp. 3=10841
Tb, negative effect peaks 2=21106
Te, rel. to band struct. 2=16628
Te, effect of annealing 1=17623
Te, effect of annealing 2=3990
Te, rel. to electron energy bands 1=14374
Te, galvanomag. coeffs. at 4.2°K 3=835
Te, pure and p-type 1=20050
Te, valence band structure 3=22953
Ti_2O_3 3=25369
W, Fermi surface study 4=4022
Zn, Fermi surface, magnetoelec. data 3=12945
Zn, by He temps. meas. 3=8492
Zn, isothermal effects at low temp. 0=9944
Zn, mag. breakdown effects and Fermi surface 4=28539

flow through ducts of variable cross-section 1=9675
flow, through ducts, rel. to wall cond. 2=5463
flow, effect of viscosity, fluid cond. and wall cond. 2=5456
flow, of electrically conducting fluid under transverse magnetic field 1=8376
flow of electrically conducting fluid, in uniform magnetic field, Stokes' approximation 1=8377
flow equations, rel. to Maxwell's eqns. 4=8913
flow, flat plate drag 0=15125
flow of fluid near oscillating plate 1=13160
flow, gas, between coaxial cylinders with potential between 3=17044
flow of gas, M^2 and thin-wing expansion methods 4=30041
flow, gas, with radiation 3=19425
flow, gases, laminar boundary past plate with ionized injection 4=19182
flow with heat addition, one dim., oblique field 4=24812
flow, with heat addition, one dimensional 4=5785
flow, hypersonic, around a circle or sphere in mag. field 4=21642
flow, hypersonic in quasi-Newtonian approximation 1=5575
flow of ideal gas past thin profile 1=16540
flow of ideal perf. cond. fluid round mag. field sources 1=5539
flow of ideal perf. cond. fluid round mag. field sources 1=12010
flow of incompressible fluid in hydromagnetic capacitor 0=1199
flow, incompressible two-dim., gen. theory 3=2102
flow, incompressible, viscous, conducting fluid in transverse field 1=4703
flow, inviscid past body at low magnetic Reynolds number 1=5574
flow, laminar, entry problem equations, stability errors 3=19432
flow, laminar free convection, of elec. cond. fluid 3=2114
flow, linearized hyperbolic, past nonconducting walls 4=19180

Magnetohydrodynamics—contd
flow of liquid through diaphragm 1=1964
flow, at low conductivity, linearized problem 3=2103
flow in magnetic annualar shock tube 0=1195
flow of non-newtonian fluid bet. rotating coax. cones with axial current field 4=24815
flow due to oscillating plane 1=5552
flow between parl. planes, in coplanar mag. field, instability 1=3045
flow of partilly ionized gas in axial mag. field 0=7119
flow past cylinder with aligned mag. field 2=15999
flow past cylinder, mag. field distortion 4=30039
flow past magnetized cylinder, high mag. Reynolds numbers 2=5450
flow past magnetized sphere 4=30040
flow past porous flat plate, in transverse mag. field 0=19898
flow past a rotating magnetized sphere 3=14570
flow past semi-infinite plate, boundary layer 3=14753-4-5
flow past semi-infinite plate, transverse 3=2105
flow past thin foil 3=2096-7
flow, past thin wave-shaped plate 3=14749
flow, plane channel, in compressible liquid 4=11781
flow in rectangular duct entrance, finite difference analysis 4=5773
flow due to rotating disk 3=479
flow round a conductor carrying a current 4=16646
flow, round flat vanes, normal and parallel to field 3=21962
flow round spheres, in strong mag. field, resistance 0=17084
flow round thin profiles 3=19426
flow similarity parameters with weak shock waves 4=27630
flow stability between 2 rotating cylinders 2=17936
flow, temperature instability 3=9918
flow through tubes, in transverse mag. field, stationary modes 1=8380
flow through tubes, in transverse mag. field, stationary modes 1=12009
flow of viscoelastic elec. cond. liq. in mag. field 2=13671
flow of viscous electrically conducting fluid 1=9677
flow of viscous fluid past insulated plate 4=27628
flow of a viscous, incompressible, weakly conducting fluid around a mag. sphere 3=17035
flowing ionized gas, electrode heating 2=20131
flows, elliptic–hyperbolic transition regions 3=480
flows, relativistic, compressible, intrinsic equations 3=9915
flows, steady, reducible problems 1=5556
fluctuation theory 4=676
fluid analogue of certain problems 0=9157
fluid in axisymmetrical tube, elec. current passage, small Reynolds numbers 2=9699
fluid, compressible, ideal, stationary, eqns. for const. ang. vel. 2=967
fluid, conducting, motion past fixed body, aligned mag. field present 3=24448
fluid cylinder, conducting, instability due to axial current 1=7132
fluid effects in finitely conducting medium, review 1=10780
fluid, elec.-conducting, acceleration with crossed mag. fields 2=17937
fluid flow across magnetic field, thermodynamics 1=16524
fluid flow past plane wall containing mag. dipole 3=12302
fluid flow, resistance-network calc. 0=5386
fluid, perfect, incompressible, steady 2 dimensional channel flow with small elec. cond. in non-uniform mag. field 2=17934
fluid sphere, gravitating, equil. under mag. field 1=19001
fluid sphere, oscill. about equipartition state 3=9912
fluid, turbulent conducting, large Prandtl number, weak mag. fld. growth 3=17038
fluid, viscous, particular oscillating fields 2=9693
fluids, charged, surfaces, with finite conductivity, in general relativity 3=18714
force-free fields 1=358
force-free mag. fields, stability, appl. to spiral galaxies 3=5825
force-free magnetic fields, general props. 0=12689

Magnetohydrodynamics—contd
free boundary layers between 2 streams, effect of magnetic field 1=13162
free jet flow, study 3=17040
free jet, laminar and turbulent incompressible viscous free flow 4=19177
fully ionized gas, motion in magnetic field with electric field present 1=5452
Galactic gas 4=13898
Galactic magnetic fields, theory 0=18826
gas, compressible, conducting 1-dimensional motion 2=3149
gas, conducting, compressible, inviscid 4=11777
gas, conducting, radial flow in crossed fields 3=12306
gas conductor, hollow, stability, in long. mag. field 0=9167
gas, constant Mach number duct eqns. 4=16644
gas in crossed elec. and mag. fields, conducting 2=3146
gas discharge, current channel formation in weak field 2=3026
gas discharge, current channel formation in weak field 3=1958
gas-dynamic flow with shock waves 3=12305
gas flow around current-carrying plate, gas-free cavity 1=5541
gas flow, between conducting plates in mag. field, Hall effect analogy 0=19897
gas flow, moment eqns. and boundary conditions 3=5821
gas flow, quasi-stationary inversion effects 2=5461
gas flow, 2-dimensional, conducting, in transverse field, linearized theory 2=17935
gas, transcritical and hypercritical flows 2=3147
gas in uniform rotation, plane waves, dispersion eqn. 4=16638
gas, viscous, electrically conducting, flow in plane channel, in transverse fields 4=3117
gas, viscous flow, with heat transfer 2=20119
gaseous atmosphere, elec. conducting, with gravitation, oscills. 2=11765
gaseous cylinder, self-gravitating, with mag. parallel to axis, instability 4=4848
gaseous mass, magnetodynamic and adiabatic equilibrium 1=5567
gaseous mass, spheroidal, non-uniform rot., equilib. 2=11764
gasomagnetic shock waves, density jumps, velocity, collision press. 1=13167
general corpuscular field due to sun, existence, theory 2=965
general principles 4=11774
generation of sound by e. m. waves in ionized media 2=2823
generators, basic equations 3=7692
generator using combustion gases as heat source 3=2117
generator for direct conversion of thermal energy 3=14759
generator with divergent duct, transonic deceleration 1=16544
generator, Hall effect, one-dimensional flow analysis 3=14760
generators, nonequilibrium ionization 3=4263
generators, small-power, first results 2=15879
generators, tensor conductivity, current distrib. 1=3051
geomagnetic dynamos 0=18458
geomagnetic field, interaction of solar plasma 0=21316
geomagnetic storm main-phase ring current 2=4695
geomagnetic storms, theory 3=7001
geometrical, small disturbance propagation in inf. cond. perfect, compressible medium 3=9917
global hydromagnetic wave ducts in exosphere 0=8369
gravitating cylinder, instability modes 2=17932
gravitating cylinder, mag. fields present, stability 4=14873
gravitating cylinder, stability in mag. field 2=15997,20112
gravitating cylinder, stability in magnetic field 1=16529
gravitating fluid sphere, uniform external field 0=7206
gravitating inviscid fluid cylinder, stability 0=12687
gravitating liquid cylinder, with axial volume current, stability 1=1962
gravitating liquid cylinder, stability, rel. to nonsymm. oscill. 3=482
gravitating mass, adiabatic equilibrium, in rotation 0=19914

Magnetohydrodynamics—contd
gravitating plane layer, with exp. density decay 3=2112
gravitating rotating gas, adiabatic equilibrium 0=5384
gravitating sphere, instability 4=4849
gravitating sphere in mag. field 0=7207
gravitation instability of infinite rotating layer in non-cond. medium 4=23844
gravitational instability of compressible medium 3=9156
gravitational instability for finite Larmor radius 2=17942
gravitational instability in nonuniform mag. field 3=9154
gravitational instability, of non-uniform rotating medium 0=19889
gravitational-magnetic instability, fluid with finite elec. and thermal cond., 4=8914
gravity waves, elec. cond. fluid in mag. field 2=13661
gravity waves in horiz. mag. field 3=4260
growth of weak mag. field "blob" in turbulent fluid with large Prandtl number 4=14875
Hall effect generator, flow, one dimensional theory 3=17045
Hall effect in viscous flow of ionized gas 1=15964
Hall and ion-slip effects, non-uniform gas 2=19625
Hamilton principle 4=5780
hardcore pinch with small elec. cond., stability 2=17939
Hartmann flow of conducting liquid 1=16508
Hartmann flow, 2-dimensional, stability 2=15994, 17933
heat addition to one dim. flow in oblique mag. field, calc. 4=27627
heat conduction, plasma, relativistic 4=14647
heat convection in impressed magnetic field 0=3672
heat-elec. direct conversion, review 2=9517
heat to elec. energy, direct conversion, new meths. 2=9518
heat transfer bibliography 3=7364
heat-transfer, flow between parallel plates 2=7437
heat transfer, in flow between plates 4=29783
heat transfer, in flow over flat plate, stagnation point conditions 1=363
heat transfer rel. to mag. field, elec. conducting and thermally radiating fluid 4=8915
heat transport by convection in magnetic fields 1=5364
heating of upper atmos. 3=25919
helical systems, equilib. 2=20128
Helmholtz instability, Coriolis force effects 3=2099
Helmholtz instability study, with parallel mag. fields 2=5455
hodograph for two-dimensional flow 3=21963
Hugoniot adiabatic 2=16004
hydraulic resistance, in liquid metal flow in transverse field 1=7137
hydrodynamic and hydromagnetic stability problems, variational principles 1=9549
hydromag. capacitor, flow of incompressible fluid 3=7687-8
hydromagnet, self-generating liquid conductor 1=10770
hydromagnetic and acoustic modes coupling, sound absorption in liquid Na and K 4=14283
hydromagnetic equation, stability of solution 1=16530
hydromagnetic equilibrium, theory 1=5566
hydromagnetic fields, separately stable, joint instability 3=17039
hydromagnetic flows, 3-dimensional, steady, isentropic, compressible 1=9670
hydromagnetic and magnetoacoustic waves in plasma 1=4606
hydromagnetic problems relating to geomagnetic storms 1=6654
hydromagnetic resonators 0=17089
hydromagnetic shocks, four basic properties 0=15133
hydromagnetic turbulence, rederivation of Chandrasekhar's theory 1=16519
hydromagnetic wave propagation in a compressive ionized fluid 0=11030
hydromagnetic wave propagation in ionosphere 0=16438
hydromagnetic waves due to Argus detonations, world-wide effects 0=16411
hydromagnetic waves in compressible fluid conduction 1=16534
hydromagnetic waves in earth's field 1=9207
hydromagnetic waves between earth and sun 0=14395
hydromagnetic waves in ionosphere 3=13742
hydromagnetic waves in a plasma 1=5484
hydromagnetic waves, radiation 0=17088
hydromagnetic waves, reflect. and refract. 0=7204
hydromagnetic waves, rel. to solar effects 1=5156

Magnetohydrodynamics—contd
- hydromagnetic waves due to upper atmospheric nuclear explosions 1=6658
- hyperbolic regions, magnetosonic group and phase vel. 2=9702
- hypersonic flow past wedge 3=24451
- hypersonic shock wave, m.h.d. supported 3=18901
- incompressible flows, theory 4=11775
- incompressible fluids, axisymmetric soln. of eqns. 1=12004
- incompressible m.h.d. eqn., soln. of 4=3123
- incompressible systems, stability, viscosity effects 0=19902
- induction drag of conducting sphere 0=5391
- infinite cylinder, mag. field parallel to axis 0=3838
- infinite cylinder, radial adiabatic pulsations 0=3839-40
- infinite cylinder, radial mag. field 0=3840
- infinite cylinder, radial pulsations, in mag. field 0=5388
- infinite fluid, generation by vortical current rings 3=477
- infinitely cond. plasma expanding in mag. field 1=4594
- injection of charged particles into mag. field 2=7727
- instabilities in mulitpolar systems 3=21949
- instability of equipartition state in fluid sphere 4=29358
- instability of gaseous cylinder 0=19903
- instability, thermal, electrically conducting fluid, mag. field effect 4=21639
- instability, vibr. convection, theory 2=13670
- instability, vibrational convection, theory 3=5830
- instability of viscous, thermally cond. and rotating medium 1=15606-8
- interaction between mag. field and electrically produced shock wave 2=1190
- interaction of shock waves with e.m. field 0=19911
- interaction of streaming plasma with dipole mag. field 4=18819
- interface between solar wind, geomag. field, oscills. 2=17211
- interior problems 0=1198
- international symposium on ionosphere 0=10417
- international symposium on ionosphere 1=2565
- interplanetary plasma flow round earth 3=9287
- interplanetary space 0=9180
- interstellar gas macro-circulation in large-scale magnetic fields 1=9250
- interstellar medium, refl. and refr. of waves 2=15996
- inviscid fluid, rel. to electrohydrodynamics 3=9921
- inviscid fluid flow, transverse mag. field 3=24458
- inviscid parallel flow of cond. fluid 1=16517
- inviscid plane flow, round obstacle, mag. field perp. to flow 0=19891
- ion slip in plasma flowing in mag. field 2=15914
- ion wave instabilities 0=7118
- ion wave instabilities 1=314
- ionization diffusion in dipole field 3=23607
- ionized gas cloud accel. with electron flux scatt. 2=3148
- ionized gas cloud acceleration with electron flux scattering 3=2113
- ionized gas, in strong field, Larmor circle model, kinetics 1=7051
- ionized gases, low density, in axially symmetric mag. fields 3=19182
- ionizing cylind. shock in tranverse field 4=8918
- ionizing waves, rel. to plasma prodn. 3=7684
- ionosphere, and explosion, nuclear, high-altitude, mag. var., short time delay 3=23616
- ionosphere, mag. pulses from nuclear explosion, high altitude, 0.01-25 c/s 4=2326
- ionosphere, short period wave absorption in model V_3-belt 4=13831
- ionosphere, wave attenuation, theory 3=9074
- ionosphere, wave motion, three-fluid theory 3=16250
- ionosphere wave propagation 0=12158
- ionospheric emissions, Nov. 18-21, 1960 1=20924
- ionospheric heating, geomag. micropulsation correl. 0=16439
- ionospheric heating, by hydromag. waves, geomag. micropulsation correl 0=16439
- ionospheric heating, by hydromagnetic waves 0=9181
- ionospheric hydromagnetic waves 1=15256
- ionospheric turbulence, influence of earth's mag. field 0=12172

Magnetohydrodynamics—contd
- irrotational flow, classes of stationary two-dim. solns. 0=15117
- isentropic one-dimen. channel flow 1=16516
- isentropic steady flow problem 0=12684
- isothermal shocks 0=15132
- isotropic turbulence spectrum, response to mag. field 3=21952
- jet, compressible, two-dimensional 2=13663
- jet of conducting, inviscid gas in uniform field 1=18377
- jet flow 4=27629
- jet of fluid in transverse mag. field 3=12299
- jet of liq. carrying current, capillary instability 4=14126
- jets, gas, perfectly conducting inviscid, in magnetic field 1=10772
- Kelvin—Helmholtz discontinuity, stability 3=21948
- Kelvin—Helmholtz instability, effect of magnetic field and rotation 1=15787
- laminar boundary-layer equations at low magnetic Reynolds number 3=4259
- laminar boundary layer response to change in free stream vel. 4=5789
- laminar boundary-layers, two-dimensional 1=5555
- laminar flow of elec. cond. fluid along infinite plate 1=16514
- laminar flow, entrance to plane channel 2=11770
- laminar flow, enetry into annular channel 2=20124
- laminar flow in rect. channel, porous walls 3=9920
- laminar flow in rectangular tube 2=22320
- laminar natural convection flow 2=5447
- laminar steady-state flow in annular channel 0=19893-4
- Landau absorpt. 2=19993
- Langmuir pot., Couette flow of viscous plasma 2=19951
- lift force on a flat plate, var. with field, conductivity, flow velo. 4=5781
- linearized, covariant treatment 3=21953
- linearized three-component theory 3=9923
- lines of force, boundaries 3=5823
- liquid column rotating in axial mag. field 1=18995
- liquid column, with uniform volume current and surface charge 1=18994
- liquid, conducting, heated from below in mag. field 0=9159
- liquid conductor falling in mag. field, stability 3=7686
- liquid elec. conductor in circular cross-sect. tube, laminar or turbulent vel. increase 4=11769
- liquid flow between parl. porous plates 1=5538
- liquid flowing between rotating cylinders, in mag. field, stability 0=11032
- liquid instability, energy transform. near. mag. neutral line 3=5826
- liquid jets, stability in mag. fields 1=11742
- liquid metal ion transport rel. to mag. field 2=2730
- liquid metal, laminar flow, transverse effect 4=24816
- liquid metal, stirrring by rotating fields 0=6531
- liquid sodium flow facility 2=3141
- liquid solutions in rotating elec. field 1=5253
- liquids, rotating, wave theory 3=9919
- localized disturbances, propagation in rotating fluid 4=5786
- lubrication by cond. lubricant in mag. field 3=24446
- lubrication theory 2=11768
- m.h.d. generator, electron heating in Hall fields 3=24459
- m.h.d. generator, elevation of electron temp. 3=24460
- m.h.d. generator, stability, electron-temp. rise 3=24272
- magnetic annular shock tube, deviation from one-dimensional model 3=2100
- magnetic braking of rotating star 0=17091
- magnetic compression waves in collision-free plasma 1=11957
- magnetic disturbance propag., infinitely cond. fluid 0=5390
- magnetic and dynamic fields outside protostar 0=17090
- magnetic energy prod. and dissip. in differential motion 4=30042
- magnetic field loops 4=3120
- magnetic field, transverse, effect on flow 1=9673
- mag. flux diffusion in plasma, eqn. 2=9583
- mag. mirror system, speed distrib. of ions 2=1438
- magnetic stars, shape 1=2631
- magnetic storms, first phase, theory 1=6655
- magnetic storms, propagation of sudden commencements 0=21312
- magnetic variations, due to nuclear explosions 0=4770

Magnetohydrodynamics—contd
magnetite - air fluidized bed, criterion 2=20116
magneto-acoustic wave absorpt. in conducting medium 2=5460
magnetoacoustic wave fronts 2=13667
magnetoacoustic wave reflection 4=678
magnetoacoustic waves, attenuation, anisotropic relativistic case 3=24453
magnetoacoustic waves, in rarefied plasma, excited by charged particles 2=22211
magneto-acoustic waves, reflection and refraction at interface 3=19433
magnetoacoustic waves, slow and fast, velocity changes for mag. press. > hydrostatic press. 0=19909
magnetoacoustic waves, in 3-component plasma 0=19694
magnetoacoustic waves, vel. vector and wave normal angles 2=20122
magneto-aerodynamics, exact solutions 1=5557
magneto-compressional disturbance in tepid plasma 2=1431, 11653
magnetoelastic eqns., dispersion eqns. 2=7720
magnetogasdynamic flow 1=10778
magnetogasdynamic flow, one-dimensional, with wall friction 3=19431
magnetogasdynamic generator, radial field vortex, theory 2=16009
magnetogasdynamic linearized theory 1=12005
magnetogasdynamic shock waves in variable cond. gas 2=16006
magneto-gas dynamics, one-dimensional 1=5571
magnetogasdynamics, one-dimensional, in oblique fields 1=13166
magnetogasdynamics, 3-dimensional solns. 2=16007
magnetogravitational instability, under Coriolis force, critical perturbation wavelength 1=1959
magnetogravitational instability of homogeneous medium 2=15292
magnetogravitational instability of infinite compressible cylinder 1=355
magnetogravitational instability of infinite medium with finite conductivities 1=15610
magnetogravitational instability, of isothermal inviscid medium, nonuniformly rotating, inf. cond. 1=1960
magnetogravitational instability, rotating inviscid medium, finite 1=1961
magnetogravitational instability of rotating medium 3=9159
magnetohydrodynamic generator with const. area, theory 2=7728
magnetohydrodynamic generator heat-electricity conversion expts. 2=7554
magnetohydrostatics, stability, dynamical criterion 2=5457
magnetohydrostatics, stability, energy principle 2=5458
magnetoionic phenomena of Arctic E-region 0=21355
magnetoplasma, dispersion of ion cyclotron waves 2=1435
magneto-sonic wave excitation, fluids, conducting 3=17037
magnetosonic waves, fluid, mag. distortions 2=9698
magnetosonic waves, in rarefied plasma 1=13086
magnetosonic waves, simple types 1=12012
magnetosphere, HM emissions rel. to mag. storms 2=24061
magnetosphere plasma, theory of electric currents 2=4687
marginal stability conditions for stationary motions 4=19031
mercury model of hollow pinch effect 1=9678
mixed flows, transitions, flows in nozzles 2=16001
motion of conducting piston and its effect 0=9165
motion of non-cond. sphere in cond. fluid 3=19429
motion of slightly cond. liquid in diffusers 0=9176
motion of sphere in cond. fluid in mag. field 3=19430
motion of a spherical fluid mass, with circular current lines in parallel planes 3=24441
moving gas radiation field, in special relativity 2=1566, 11767
moving magnetic field behind a deuterium shock 0=1196
multistream medium, e.m. wave propagation at gyromagnetic resonance 0=1208
neutral ion—electron beam penetration across magnetic barrier 4=504
non-isothermal plasma, single-fluid eqns. 2=5337
non-isothermal plasma, single-fluid eqns. 3=4126
nonlinear Alfvén waves in a cold ionized gas 0=1193
nonstationary flow, in annular tube 1=4702
nonstationary flow, in e.m. pumps 0=19896
nonstationary flow, over infinite moving plate 0=17083

Magnetohydrodynamics—contd
nonstationary flow, in plane tube, in transverse mag. field 0=15120
non-stationary flow in a porous annular tube 4=5771
northrop plasma accelerator, momentum change meas. 2=3048
nozzle flow with three transitions 2=11771
numerical mathematics conference 0=12232
numerical mathematics conference 1=4169
Ohm's law generalization 2=22312
one-dimensional analysis of steady flows in Faraday and Hall-type channels 3=14752
one-dimensional gas flow with heat transfer 4=16645
orbits, non-adiabatic, in cusped magnetic field 3=12193
oscillating nonconducting boundary layer 4=24805
oscillating plate of finite cond. 2=11761
oscillation in ionosphere, geomagnetic pulsations 0=1993, 1995-6
oscillations in B-1 Stellarator 0=1192
oscillations, cond. viscous liq. in vertical U-tube 2=7722
oscillations, forced, infinite liquid slab 4=14877
oscillations of a gaseous cylinder under pinch effect 4=11662
oscillations of incompressible cylinder 0=19907
oscillations of an infinite cond. gaseous cylinder in a mag. field 4=8912
oscillations, bet. two vertical, parallel, infinite planes of a dense, viscous fluid 3=9916
oscillations of cond. fluid layer, resonance effects 3=24455
oscillations of cond. liquid in U-tube in mag. field 3=12298
oscillations of self-gravitating fluid 2=13662
oscillatory motion, one-dimensional, in perfect conductor 0=19905
Oseen flow past elliptic cylinder in uniform magnetic field 1=16525
parabolic cylinder, in flowing cond. fluid, in perp. mag. field 1=3043
paramagnetic gas in magnetic field. 3=171
paramagnetic gas in magnetic field, transfer phenomena 1=18475
paramagnetic liquid cylinder, gravitating, in longitudinal mag. field, stability 1=5543
paramagnetic particle motion in a fluid in a magnetic field 3=17036
particle accel. and breakdown in alternating mag. field 2=7617
particle diffusion across magnetic field 0=17087
particle motion in dipole mag. field equatorial plane 2=7717
particle orbit stability in mag. field, helically perturbed 4=29996
perfectly conducting fluid, mag. field movements 2=1563
perfectly conducting fluid, transition régimes in certain flows 1=16520
periodic force-free field with neutral lines, stability 1=5564
in pinch collapse kinetics, validity of approx. 1=2973
pinch effect, hollow, hydromagnetic instability 1=18882
piston motion, with mag. field perp. to piston face 1=3046
piston motion, magnetoacoustic waves, heating 0=11035
piston, moving in cond. fluid, fast and slow shock waves 0=1190
piston moving in ideal gas, fast and slow shock waves 1=556
piston shock waves, gas ionization, in e.m. field 0=3842
plane and axisymmetric stationary gas flows 3=19434
plane flow, around insulating body, boundary layer formation 0=12683
plane vortex sheet, stability 2=13665
plane wall with uniform suction 2=7725
plane-wave solution of Euler—Minkowski equations 1=8378
plane waves in ideal gas in transverse mag. field 0=15119
plane waves, reflection and refraction, at 2-media boundary 0=12688
plasma, A, accelerated, velocity and impulse 1=9560
plasma in a.c. field, transport coeffs. 3=9774
plasma accel. 2=1414
plasma acceleration 1=10694

Magnetohydrodynamics—contd
- plasma, axially symm., hydromagnetic stability, necessary criterion 2=179
- plasma beam, ion and electron, neutralized, mag. barrier penetration, calc. 3=19423
- plasma behind shock wave front; mag. props. 2=9586
- plasma Boltzmann eqn. 1=7062

- plasma in mag. field, stability, finite conductivity effect 4=14721
- plasma, magnetoacoustic waves 4=14671

Magnetohydrodynamics—contd
- plasma motion, Lagrangian and Hamiltonian formulations 3=12194
- plasma motion, in transverse mag. field, approx. soln. 0=9169
- plasma motion, under piston action 0=9170
- plasma, multicomponent 1=16302
- plasma multicomponent, density fluctuations 1=18820
- plasma—neutral gas interface, coupling of m. h. d. to e. m. and acoustic waves 4=29912
- plasma, nonisothermal, magnetogasdynamic equations 4=29913
- plasma, nonisothermal, no collisions, shock waves 1=18853
- plasma, nonstationary rotation 2=181
- plasma, 1-dimensional flow 2=3042
- plasma oscillations 1=18894
- plasma, particle accel. by hydromagnetic shock wave 2=186
- plasma particle distrib. theory 2=7610
- plasma particle distrib., theory 3=5669
- plasma prod. in cathode discharge 2=7605
- plasma, propulsion by means of travelling sinusoidal magnetic field 1=16338
- plasma puff expansion in longitudinal field 4=18800
- plasma, quasi-one-dimensional flow 3=21791
- plasma, rarefied, damping of waves due to "near" collisions 2=1433
- plasma, rarefieid and inhomogeneous, oscillations 4=8750
- plasma, rarefied, tangential burst, stability 2=5336
- plasma, rotating, acceleration in axially-symmetrical channels 4=27518
- plasma rotation, between 2 coaxial cylindrical conductors 0=9171
- plasma rotation in θ-pinches, mechanism 4=5604
- plasma, self-gravitating, stability conditions 2=11657
- plasma, shock wave propagation 1=5453
- plasma source interaction with uniform magnetic field 4=18820
- plasma, spatial-periodic structures in transverse magnetic field 4=8688
- plasma in spatially periodic mag. field, equilibrium 4=14696
- plasma, Spitzer's eqns., modifications 2=1430
- plasma stability against resistive interchange modes 4=14716
- plasma, stability, with continuous density distrib. 1=13090
- plasma stability in inhomogeneous mag. field 2=9579
- plasma stability rel. to mag. surfaces 3=1975
- plasma stability, rotating 4=14717
- plasma streaming, in line-current mag. field, interactions 1=3047
- plasma streaming, low density at mag. barrier 1=4596
- plasma streams interacts. in transverse mag. field 4=29917
- plasma, swirl due to Hall effect, theory 4=29914
- plasma, thermal agitation and turbulence 2=2678
- plasma, three-component, transport eqns. 4=16471
- plasma, toroidal stability 3=16949
- plasma, toroidal, stability conditions 4=8680
- plasma, torus, elliptical, equilibrium, magnetohydrodynamic 3=19258
- plasma transition radiation rel. to temp. 1=18836
- plasma transition radiation rel. to temp. 2=22207
- plasma transport phenomena, variations 2=13556
- plasma trapping, in cusp configurations 0=9026
- plasma, viscosity coeff. in mag. field 2=9576
- plasma, viscosity, tensor calc., and stability 4=14720
- plasma wave dispersion eqn. for exospheric corpuscular stream 2=884
- plasma waves, review 1=515
- plasma waves, small amplitude 4=24700
- plasmoid acceleration by magnetic field 1=11932
- plasmoid motion in external mag. field, expt. 4=29916
- plasmoids, dense, in toroidal mag. field, motion 4=14639
- plate disturber 3=19436
- point explosion, in gravitating continuous medium, relativistic corrections 2=939
- point explosion, in inf. cond. gas, expanding shock wave 0=2432
- Poiseuille flow, stability, in longitudinal mag. field 0=9174

Magnetohydrodynamics—contd
polytropic gas, magnetoacoustic simple waves 4=24802
porous flat plate, fluid shear flow past 2=5448
positive column instability in a mag. field 1=284
power generation, a.c. 3=7693
power generation, closed cycle, Ar—BaO suspension as working fluid 4=27224
power generation, conference 3=21966
power generation, electrode phenomena 2=22322
power generation, permanent electrodes 2=13672
power generation, review 3=5833
power generator 0=9182
power generator, permanent insulating duct walls 3=5832
power generators, with plasma jet heating 1=3052
problems 0=17078
problems, review 1=5545
propagation phenomena, linear and nonlinear 4=16631
propagation of small excitations 4=11782
propulsion from pinch collapse 1=16337
protogalaxy, mag. field intensity, upper limit 2=9106
pulsating flow superposed on steady laminar motion of viscous liq. in annular channel 4=11770
pump, d.c. electromagnetic, flow 1=5572
"pumping", cosmic-ray acceleration, momentum spectra 1=2143
quasineutral plasma, Crocco's theorem 4=27516
radiation damping theory for const. mag. field 4=5756
radiation, elastic conducting solid—liquid contact in mag. field 4=24288-9
radiation magnetogasdynamics, plane couette flow 4=18816
radiation-magneto-gas dynamics, shock waves 1=16543
randomly turbulent media 4=11772
Rankine–Hugoniot relations, in limiting cases 2=1569
rarefaction shock waves, impossibility of existence 1=12013
Rayleigh problem rel. to flow behind shock wave 2=20126
Rayleight's problem 0=11024
Rayleigh's problem for motion of non-perfect conductor 1=16509
Rayleigh–Taylor instabilities, collapsing cylindrical shell 2=20127
Rayleigh–Taylor instability, development of 3=24445
Rayleigh—Taylor instability under effect of e.m. field 4=19174
Rayleigh—Taylor instability, effect of field 4=8910
Rayleigh—Taylor instability, effect of vertical mag. field 3=9914
Rayleigh–Taylor instability in plasma 2=19952
Rayleigh—Taylor instability, rotating conducting fluid 4=8911
Rayleigh waves between cond. fluid elastic body in mag. field 2=17938
reflection and refraction at boundary of compressible media 2=7721
reflection and refraction of hydromagnetic waves in ionized gas 1=16539
refraction, gas, non-uniform mag. field 3=17043
Reiner—Rivlin fluids in a mag. field 4=5767
relativistic, equations 3=4256
relativistic ideal gas, current vector and mass tensor 3=70
relativistic ideal gas, current vector and mass tensor 3=1630
relativistic, perfect and imperfect gases, from Boltzmann eqn. 0=12685
relativistic, shock waves perpendicular to field 1=19013
relativistic, singular hypersurfaces 1=13163
relativistic theory 1=18998
relativistic waves, 1-dimensional, Zemplen theorem 0=11028
resistance of bodies in circumfluent flow of electroconducting fluid, mag. field effect 4=24819
review 0=9166
review 3=12297
review, Alfvén waves, applications 2=22315
review lecture 4=30035
review, simple theory, applications 0=5380
revolving fluid, stability 2=11772
Riemann's waves analogue in non-stationary problem 4=24804
ring-shaped plasma conductor, in mag. field, stability 0=19674
ring-shaped plasma stability 0=15015
rocket propulsion, interplanetary 3=19424

Magnetohydrodynamics—contd
rotating compressible fluid mass, meridional motions 0=17080
rotating conducting liquid in mag. field, starting and stopping of motion 1=3044
rotating configuration, in toroidal magnetic field 0=7208
rotating configurations, virial tensor eqns. 3=4255
rotating cylindrical liquid, in mag. field, steady motion, Hg and CS_2 data 1=4708
rotating discontinuity interactions 2=3143, 9695
rotating disk, in conducting fluid, effect of weak vertical mag. field 3=14747
rotating disk, with mag. field along rotation axis 0=17085
rotating fluid sphere, thermal instability 0=19900
rotating, incompres. fluid, rigid boundary 3=21961
rotating plasma 2=1455
rotating plasma pinch, stability 1=2972
rotating polytropes theory rel. to astrophysics 1=17993
rotating viscous medium, stability in mag. field 1=15609
rotation of symmetric body in viscous conducting fluid 1=9676
rotational gas flow reciprocal relations 4=24818
satellite drag in conducting magnetized fluid 1=12787
scaling laws, temp. distrib., compressible gases 4=3121
scaling laws, 10 dimensionless parameters, Π-theorem method 1=3048
scattering of waves, by thermal fluctuations 4=19172
self-gravitating inf. cylinder, radial pulsation 1=8383
self-reproducing solns. with axial symm. 3=14757
self-similar waves, ideal gas in transverse field 1=5540
semiconductors, fluctuations, electrical carrier motion 3=20280
shear flow of inviscid incompressible conducting fluid 2=11759
shear layer, heterogeneous, stability 3=2104
shock conditions for chemical reactions 1=16521
shock conditions, flow of weakly dissipative fluids, finite conductivity 3=18893
shock configuration in perfectly cond. gas 2=3144
shock front, width, effect of electron inertia 4=16642
shock-fronts, at wedge, condition of attachment 0=9179
shock ionization and detonation, theory 2=1576
shock in plasma, in absence of particle collisions 1=11934
shock propagation in non-uniform ducts 4=5769
shock relations, relativistic 4=18322
shock structure for finite-temp. electrons 3=2106
shock tube, mag. fld. investigation 4=8312
shock tubes, "switch-on" shocks 4=14262
shock wave attached to a cone 2=3142
shock wave, collision-free, structure 3=2107
shock wave damping, mag. fld. effect 4=11773
shock wave giving rise to conductivity discontinuity 1=19011
shockwave interactions 4=24808
shock wave motion along a mag. field 1=19012
shock wave, non-progressive, disruption 2=11777, 13666
shock wave obs. in preheated inverse pinch 4=14261
shock wave, passage through magnetic field 1=5549
shock wave propagation in transverse field 4=19184
shock wave propagation velocity, spatial var. 2=16005
shock wave, reflection in perfectly conducting gas 1=19010
shock waves 1=16531
shock waves 1=10779
shock waves along arbitrary surface, theory 4=18834
shock waves, appl. of Zemplen's theorem 2=22314
shock waves, attached, stationary, in ionized gases 1=5569
shock waves, in conducting medium 4=30038
simple waves, constant flow regions 1=13168
shock waves, curved, in conducting gas flows, in mag. field 4=29691
shock waves, cylindrical, flow analysis 1=7139
shock waves, cylindrically converging, influence of external short-circuit rings 4=16171
shock waves, effect of anisotropic elec. cond. on wavefronts 0=9178
shock waves, electrically excited 0=7210
shock, waves, entropy and velocity 0=2203
shock waves, fast and slow, structure in steady 1-dimens. flow 3=17041
shock waves, Fermi accel. of particles 3=9910
shock waves in gas with anisotropic conductivity 2=19598

Magnetohydrodynamics—contd
shock waves, in gas with anisotropic conductivity, structure 4=11293
shock waves, gas ionization, e.m. frontal waves 0=1197
shock waves, gas-ionizing 1=5570
shock waves, in gas mixtures, non-relativistic propag. 1=1971
shock waves, high-speed, in a magnetic annular shock tube 0=1194
shock waves, hydromagnetic, growth, effect of transverse mag. field 1=13169
shock waves, inclined, struct. 2=16003
shock waves, inclined, wave velocity nomograph 0=11033
shock waves, interaction with e.m. field 1=5542
shock waves with Joule dissipation, permanent structure 1=360-1
shock waves in linear pinch discharge 1=16336
shock waves, low-intensity, structure 1=4712
shock waves in monatomic cond. fluids 3=21965
shock waves, nonevolutional, disintegration 2=11776,22317
shock waves, in partially ionized gas, structure 0=11034
shock waves in plasma, 4 theorems for possible flows 4=2978
shock waves in plasma, similarity solution 3=7542
shock waves in plasmas, mechanisms 3=1973
shock waves, preionization effects 4=29695
shock waves, propag. theory 2=9704
shock waves, propagation in inhomogeneous gases 1=10774
shock waves, propagation perp. to mag. field, Rankine-Hugoniot eqn. 0=15127
shock waves, refl. and refr., exptal. data 2=1577
shock waves, relativistic 1=19013
shock waves, review of theory 1=9680
shock waves and shock wave structure 1=5568
shock waves in solar flares, cosmic ray prod. 1=26
shock waves, travelling vertically in ionosphere due to atomic explosions 0=16773
shock waves, unstable, multi-wave disintegration 0=9177
shock waves, width, anisotropic relativistic case 3=24453
shocks, evolutionary conditions 3=7691
shocks, flows behind, existence and uniqueness 2=11405
shocks, ionizing, struct. 2=13357
shocks, stationary, in neighbourhood of Alfvén velocity 4=16641
similarity rule, for diabatic flow 0=5382
simple wave—weak shock interactions 3=2108
simple waves, contant flow regions 0=9164
singular perturbation problem 4=5784
singular surfaces 1=16513
sink flow in strong mag. field 2=13668
slab, infinite, carrying uniform current stability 2=1572
slightly ionized gas in elec. and mag. fields, elec. and thermal currents in 0=14974
solar atmosphere, local equilib. 3=7029
solar chromosphere, plage, and corona heating by waves 1=15492
solar corona, viscous damping 1=12753
solar corpuscular stream boundary by interaction with dipole field 2=6965
solar flares, cosmic ray generation 1=18089
solar granulation, wave propag. in horizontal field 0=2078
solar magnetohydrodynamic radiation, effect on earth 2=13077
solar prominence, quiescent, model 1=25
solar spicules, solar outer atmosphere heating 0=18762
solar wind, stability with geomag. field 2=4693
soln. of eqns. 0=12682
solution of curl A X A = grad ϕ 1=15384
sound pulses in conducting medium in mag. field 0=5392
sphere, in conducting fluid, rel. to rotation 4=19173
sphere, in mag. field, deformation and stability 2=9703
sphere, magnetized, rotating in cond. fluid, slip flow 4=27625
sphere, motion in cond. fluid; e.m. phenomena 3=2115
sphere, rotation in viscous cond. liq. in mag. field at high Reynold's number 4=14874
sphere rotation, in viscous incompressible fluid, about axis parallel to mag. field 1=362
spherical eddy sources 4=19175
spherical vortex, rotating 3=476
splitting of small discontinuities 0=2433

Magnetohydrodynamics—contd
stability of arbitrary equilibria 2=5459
stability conditions of equil. configs. 4=669
stability of force-free toroidal fields 0=17086
stability, magneto-gravit., stratified medium 2=7723
stability of non-viscous Couette flow 0=7205
stability of plane laminar flow between moving plates 4=27626
stability of plane shocks 4=19183
stability problem, rel. to Hall effect 4=8917
stability, under rapidly varying mag. field 2=22321
stability, Rayleigh—Taylor, effect of rot. and mag. field 3=24444
stability of stationary equilibria 1=5563
stability of steady-state motion 2=1571
stability of streaming cylindrical incompressible plasma 0=9035
stability of toroidal equilibria 1=19004
stability and turbulence 4=11779
stability of viscous flow between rotating cylinders in mag. field 1=16527
stabilization of cylinder carrying current, by h.f. field 4=24712
stagnation point flow, axially symmetric with heat transfer 1=8375
stagnation-point flow, transpiration cooling 3=273
star, fluid, polytropic, in non-rigid rotation 2=4799
stars, rotating liq., models 2=9087
stationary dynamic motions, stability 2=9700
stationary flow, in long porous annular tubes 0=17081
stationary flow, 1-dimens. and quasi-1-dimens., shock waves 0=19913
stationary plasma wave, finite amplitude 3=24280
steady linearized flow eqns., solutions 1=16510
steady-state, with axial symm. 3=14758
stellar atmosphere, stationary shock waves 2=2544
stellar atmospheres 0=18853-5
Stokes flow 1=13164
striated-layer system, thermodynamic analysis 4=5544
with suction, flow formation in Couette motion 4=5788
sudden commencements, hydromagnetic interpretation 2=4697
in sun, observability 0=3416
sun, stability of sub-photospheric tube of force 3=18629
sunspot meridional drift, hydromagnetic approach 1=23
sun spot theory 1=18209
supersosability 1=16512
superposability, applic. to 5 problems 0=7203
superposability of axi-symmetric flows under axi-symmetric mag. fields 0=9172
superposability and harmonic analysis of a viscous liquid 1=16511
supersonic sound, dispersion and absorption 3=3853
surface interactions 2=20125
surface wave attenuation bet. fluid and solid with normal field 4=24807
surface waves and instabilities 1=19005
surface waves in liq. 2=13316
survey of subject 0=11025
symmetrical currents 3=19427
symposium 1=4700
Taylor and Dean flows, instability under circular mag. fields 2=3138
Taylor—Proudman theorem generalization 2=15992

ternary (electrons, ions, neutral atoms) plasma 0=15038
thermal stability of fluid layer 3=9417
thermalized plasma development 2=9578
in thermonuclear fusion 0=3757
thin aerofoil theory 3=12300
thin bodies in oblique fields 2=7726
thin bodies in oblique fields 3=481
3-dimensional flow, perfectly cond. fluid 3=14750
three-dimensional flows in ideal gas 2=20118
time-dependent cond., plane flow in mag. field 4=24811
toroidal equilibria, hydromagnetic stability, effect of inertia term 2=19950
toroidal equilibria, stability criterion 2=15998
toroidal oscillations, of spherical viscous mass, in uniform mag. field 0=19908
toroidal plasma, equilibria, particle model 1=4610
toroidal systems of small curvature, equil. and stability 3=12191

Magnetohydrodynamics—contd
toroidal systems under scalar pressure, stability 1=18992
transient flow of fluid in rectangular duct 1=12008
transonic flow of perfectly cond. fluid 2=20123
transverse waves in dipole mag. field 4=27622
trapped particle distrib. in changing magnetic field, theory 1=21078
travelling disturbances originating in outer ionosphere 0=12165
turbulence on astrophysics 1=15514
turbulence in cond. fluid in mag. field 3=21951
turbulence of conducting fluid in strong mag. field 4=3124
turbulence, decay 1=7136
turbulence decay, final stage, energy spectrum 2=15993
turbulence, in e.m. pumps, mag. field independ. 0=17079
turbulence, energy spectra 1=5553
turbulence, energy transfer in spectral and fluctuation theories 4=19176
turbulence, growth in solar photosphere 2=19308
turbulence, isotropic, energy spectrum theory 3=17042
turbulence, isotropic, Kraichman's theory 2=17940
turbulence, large mag. field effects 4=30033
turbulence, for poor conductivity and Reynolds number $\gg a \ll 1$ 4=5777
turbulence, small-scale, structure 4=14876
turbulence, in viscous incompressible fluid 2=13664
turbulent fields, kinematical theory 4=2418
turbulent flow between parallel plates 2=11773
turbulent flow, cond. liquid in rect. tube 3=2098
turbulent flow of liquid metal in mag. field 1=16526
turbulent flow in transverse mag. field 3=21957
turbulent magneto-fluid dynamic boundary layers 1=5550
twisted magnetic fields in fluid of finite conductivity, stability 1=5565
2-dimensional flow, non-parallel mag. field 3=14751
two-dimensional flow past plane wall with mag. dipole 2=5453
two-dimensional flows, in neighbourhood of Alfvén vel. 4=16634
two-parameter flows, Gromeka and Chaptygin transforms 3=2111
uniqueness theorem, for viscous incompressible cond. fluid 1=7127
unsteady flow through const. cross-section 2=17941
unsteady flow between two plates with transverse mag. field 4=5770
unsteady motion in channel, anisotropic cond. effect 4=671
van Allen belt, hydromagnetic waves 1=15336-7
Van Allen radiation protons, wave effect on lifetime 1=21069
Varenna lectures 1=5438
variational principle 1=13165
velocity, acoustic waves, concept validity 4=11782
velocity discontinuity between compressible fluids in mag. field, stability 4=16639
vibrations in cylindrical cavity 1=9679
viscoelastic flow between two plates with transverse mag. field and suction and injection 4=5772
viscoelastic surface wave absorption in real conductor in mag. fld 4=24806
viscous, compressible fluid, small disturbances, rel. to corioli's forces 4=24810
viscous elec.-cond. boundary layer, stability in mag. field 0=7202
viscous flow of conducting fluid along circular cylinder or plate with uniform suction 1=8379
viscous flow in half-plane, unique solns. 0=1191
viscous flow, betw. 2 porous plates, velocity and mag. field distrib. 0=19899
viscous flow stability in curved channel 1=18999
viscous fluid flow in initial section of plane channel, mag. field present, effect of elec. cond. anisotropy 4=16640
viscous gas with anisotropic cond., nonstationary flow 4=677
viscous hypersonic flow near stagnation point 2=22313
viscous motion of conducting fluid between coaxial rot. cylinders with radial mag. field 4=24809
vortex equations 0=15126
vorticity and circulation in compressible fluid 1=5537
vorticity and electric current conservation 2=1565
vorticity generation by oscillating boundaries 3=5831

Magnetohydrodynamics—contd
vorticity and magnetic field, analogies and differences 0=19904
wake of solid moving in fluid, effect of mag. field 4=30034
wakes in viscous conducting fluid 1=5559
wall-effect in 2-dimension Stokes flow 1=10773
wave fronts in solar atmosphere 1=6710
wave guidance in magnetosphere 3=9942
wave interactions; fast and slow shocks and expansion waves, with walls 2=17943
wave motion of incompressible conducting liquid 1=16532
wave propag. in cond. fluid, infinite circ. cylind. conductor producing unperturbed field 4=27624
wave propagation, effect of Maxwell's displacement current 4=16636
wave propagation, elec. cond. and viscosity effects 2=1564
wave propagation in waveguides 0=1200
wave reflection at boundary between anisotropic plasmas 4=14646
wave surfaces, in compressible cond. fluid, Hamilton—Jacobi eqn. 1=4713
wave surfaces, in compressible cond. fluid, point disturb. 1=4714
wave theory, Riemann invariants, velocity changes for mag press. > hydrostatic press. 0=19909
wave transmission to earth 2=11778
waveguides 0=11026
waves, absorption in plasma, in const. mag. field 3=24283
waves in compressible fluid conductor 0=5385
waves in compressible fluid, vorticity and current density 1=19006
waves, in compressible perfectly conducting fluid 1=8382
waves in conducting sheet in mag. field 1=1967
waves in a const. dipole mag. field 2=20121
waves, cylindrical and plane 0=11029
waves of discontinuity in ionized fluids 2=20113
waves in dissipative medium, simple finite amplitude 1=19009
waves in dissipative medium, simple finite amplitude 2=22318
waves, effects of dissipation 1=9672
waves, eikonal method extension for soln. 2=15995
waves, elec. conduction law, ionosphere appl. 2=7768
waves excited in plasma by moving charge 0=5325
waves of finite amplitude 0=3841
waves of finite amplitude 2=7724, 16002
waves, finite amplitude 3=5828
waves, finite amplitude, in multi-component medium 1=3049
waves, with finite amplitudes, 1-dimens., field and velocity transverse components 1=1969
waves, for finite conductivity 1=5560
waves generated by piston motion in conducting medium 0=19912
waves generated by plasma flowing into vacuum 1=4597
waves, generation, in media of arbitrary elec. cond. 1=7155
waves in geomagnetic field, distant, 1959 δ2(Explorer 6) obs. 3=9127
waves in inhomog. fields of constant direction 3=17034
waves in inhomogeneous field 4=21638
waves in ionized gas 0=5383
waves, ion ionized gas, hydromagnetic and radio 2=3145
waves in ionized gas in mag. field 1=19008
waves in ionosphere 0=8370
waves, linear behaviour at large amplitude 1=559
waves in liquid with infinite cond., resonance 3=21958
waves rel. to magneto-ionic theory 4=5766
waves, nonlinear 1-dimens. motions 3=24452
waves in plasma, Chew—Goldberger—Low approx. 0=9163
waves, in plasma moving in ionized gas, dispersion eqn. 0=19910
waves, in plasma with particle-velocity anisotropy 1=4601
waves, in plasma, surface 2=183
waves, in primeval nebula, ang. momentum transfer 0=292
waves, propag. into region at rest 4=8909
waves, propagation in cylindrical guide 1=1968
waves, propagation in cylindrical pipes, theory 4=19181
waves, propagation and decay 1=5561
waves in pulsed electrodeless discharge 2=11684

Magnetohydrodynamics—contd
- waves, reflection and refraction 0=9162
- waves, reflection and refraction at discontinuity 3=12304
- waves, scattering and interconversion by thermal fluctuations 4=19172
- waves, in second approx., "wave wind" 2=11775
- waves by solar plasma impact on geomag. field, rel. to mag. currents 2=13076
- waves, surface, mag. field effects, var. with liquid depth 4=3119
- waves on thin shell in mag. field 2=7718
- waves, transverse, effect of particle streams 2=1567
- waves, two-dimensional, Green's funcn. 1=16535-6
- waves in waveguides and resonators 1=16537
- wavy plate in cond. fluid, impulsive motion 3=21964
- weakly cond. fluid, mag. field and current fluctuations 0=15118
- weakly cond. liquids 0=9158
- Weber transformation 4=5778
- Weber transformation, interpretation of an auxiliary function 4=11771
- Zemplen's theorem, appl. to shock waves 2=22314
- Ar arc, forward and retrograde motion in mag. fields 4=18775
- Ar plasma 4=14714
- Ar plasma, insulating-boundary thickness behind shocks 3=24456
- A, shock-ionized, effect of mag. field on flow 1=1970
- Au amalgam, mass transport of Au in crossed elec. and mag. fields 1=1966
- $CuSO_4$ soln. between two concentric tubes 2=3139
- H atoms in plasma, ionization and excitation 1=19595
- H interstellar gas, in centre of Galaxy 1=2641
- H plasma, polarization and pondermotive force effects 4=16473
- H and He arc column, with superposed mag. fld., press. var. and heat cond. calc. 4=18777
- He arc, stationary, d. c., transport coeffs. rel. to mag. field 4=18783
- Hg, convection in tubulent flow 1=4711
- Hg, Couette flow between coaxial cylinders in axial mag. field, stability 0=12686
- Hg current-carrying annular cylinder, stability, theory 4=5774
- Hg cylinder, with axial current and mag. field stability 2=1573
- Hg, expt. reproduction of co-rotation around star 2=1575
- Hg flow between rot. cylinders in mag. field 2=5454
- Hg flow in mag. fld., trial installation, Grenoble 4=11768
- Hg hardcore pitch, stability 2=17939
- Hg jet, pinch instabilities under mag. field 2=5464
- Hg jet, stability 1=5554
- Hg laminar flow in tube 2=3146
- Hg, oscillations, forced, sinusoidal, in straight tube with mag. field present, expt. 4=16635
- Hg, solid and liquid, free surface studies 1=5548
- Na, liquid and solid, hydromagnetic equilibrium 1=5547
- Xe ionization, by shock tube, elec. cond., spectrum 4=14581

Magnetomechanical effects

- enhancement by multiple-beam interference 3=20449
- evaporated layers, Kerr rotations, meridional increase 1=19958
- Faraday effect 1=17646
- Faraday effect, associated with e.p.r., in birefringent medium 4=26173
- Faraday effect, for excitons, Cu_2O data 2=589, 23125
- Faraday effect, Ge, microwave theory and expt. 1=1063
- Faraday effect, Group III-V cpds., i.r., rel. to effective mass determ. 2=23529
- Faraday effect, in high-field magnetometer 2=3129
- Faraday effect, for homog. isotropic medium, oblique incidence 4=29776
- Faraday effect, in i.r. beam modulation 3=1809
- Faraday effect, influence of e.s.r. saturation 0=10216
- Faraday effect, inter- and intraband 4=7104
- Faraday effect, mag. fine struct. portrayal 2=6668
- Faraday effect in many-valley semiconductors 1=19959

Magneto-optical effects—contd
- Faraday effect, metals, Fermi surface det., effect of electron—phonon interactions 1=8894
- Faraday effect, microwave in ferrites, temp. and freq. depend. 0=15140
- Faraday effect, microwave, use in modulation of light 3=14325
- Faraday effect, microwave modulation in paramag. crystals 1=1149
- Faraday effect, molecular crystals in region of exciton absorption 0=10033
- Faraday effect in molecules 1=12297
- Faraday effect, n-type Ge, at r.f. 4=13036
- Faraday effect in non-degenerate semiconductors 1=12431
- Faraday effect, opt. observation of ferrimag. domains 1=17972
- Faraday effect, Pb salts, rel. to electron effective masses 2=10492
- Faraday effect, paramagnetics, fine struct. 2=10579
- Faraday effect, photoelec. polarimeter 0=1047
- Faraday effect by rare-earth ions in solids 4=7102
- Faraday effect in refl., effective mass det. 4=13055
- Faraday effect, Se amorphous films, rel. to effective mass 2=4122
- Faraday effect, in semiconductors 0=7923
- Faraday effect, semiconductors, interband rotation, theory 1=11356
- Faraday effect, semiconductors, multiple reflection effects, 4=10159
- Faraday effect, Si, microwave theory and expt. 1=1063
- Faraday effect, techniques 1=6203
- Faraday effect, Y garnet 1=7704
- Faraday rot. meas. in semicond. 2=8490
- Faraday rotation in atmosphere, calc. 4=17897
- Faraday rotation in atomic spin system, theory 3=22489
- Faraday rotation in ionospheric transverse region 4=13842
- Faraday rotation meas., v.h.f. range 3=19440
- Faraday rotation, microwave, meas. using bimodal cavity 3=12316
- Faraday rotator, in resonant cavity 4=29775
- Faraday and Voigt effects, quantum theory 4=13011
- ferrimagnetic garnets, Faraday effect 0=13675
- at ferrimagnetic resonance, in YFe garnet 3=6644
- ferrites, Faraday rotation 2=14652
- ferrites, microwave Faraday effect 1=14587
- ferrites, rods, Faraday rotation 0=1806
- ferromag. domain structure, study by Kerr meridional rotation 3=23162
- and ferromagnetic domain obs. 3=23161
- ferromagnetic films, domain structure obs. by Faraday effect 3=15806
- ferromagnetic layers, investigation 3=18092
- ferromagnetic metals, Kerr and Faraday coeffs., polarimetric meas. 3=14376
- ferromagnetic, spin system excitation, inhomog. e.m. field 0=21034
- ferromagnetic transition metals, optical Hall effect, and inner mag. field 4=13039
- ferromagnetics, microscopic theory 4=22839
- ferromagnetics, u.v., visible and near i.r. regions 0=6171-3
- films, ferromag. and mag. process, freq. var. 3=25536
- formaldehyde, singlet—triplet transitions, rotation 1=14038
- free-carrier Azbel'—Kaner cyclotron resonance 3=10638
- γ-rays, possibility of Mössbauer obs. 4=13010
- garnet in r.f. field, optical Faraday effect 1=1145
- gas, active, in laser cavity, Verdet const. 4=16151
- gases, imperfect, mag. birefringence. 3=172
- gases, tetrahedral mols., rel. to octupole moment 4=20031
- glass, Faraday effect 0=13677
- glyoxal, singlet—triplet transitions, rotation 1=14038
- graphite, rel. to cyclotron reson. 2=16640
- graphite particle diffusion 4=30683
- in gyroelectric media 3=11925
- gyro-electric media, optical props., induced anisotropy tensors 2=21231
- inert gases, u.v. wavelengths 4=27223
- inorganic molecules, rotation spectra 4=25605
- ionosphere, electron contents, from Faraday effect of Sputnik 3 40 Mc/s transmission 3=16272
- ionospheric Faraday effect 4=13841

Magneto-optical effects—contd
for isolator, optical 4=21318
Kerr effect, contrast variation in study of magnetic domains 3=14712
Kerr effect, use in ferromag. domain wall thickness meas. 0=3039
Kerr effect, ferromag. films, mag. props. study 0=18195
Kerr effect, ferromag. substances, in r.f. field 0=18180
Kerr effect in ferromagnet, hysteresis loop obs. 3=9904
Kerr effect, for homog. isotropic medium, oblique incidence 4=29776
Kerr effect, for meas. domain wall thickness 2=16907
Kerr effect, meas. in ferromag. films 1=11357-8
Kerr effect, use for readout from magnetized oxides 3=14735
Kerr effect in thin films 3=15654
Kerr effect, transverse, in magnetic domain photography 3=17023
Kerr effect used in Weiss domain visible indication 1=20094
Kerr, use for ferromag. domains obs. by polarizing microscope 3=24010
Kerr longit. effect, dielectric layer effects 4=18436
Kerr rotation, increase by means of interference films 1=19956
ketones, rot. dispersion, near $n \rightarrow \pi^*$ transition 4=17305
for light modulation, diamag. Faraday effect, theory 4=16197
liquid ionic salts, refractivity and fundamental absorpt. band in far u.v. 4=179
macromolecules, Kerr effect rel. to relaxation time measurement 3=8319
magnetic birefringence in diamagnetic liquids 0=6813
magnetic-dipole exciton transitions, in cubic crysts. 2=3876
magnetic domains obs. by Kerr effect 0=21044
magnetic domains, optical meas. method 4=20535
for magnetic film domain struct. study, evaporated in vacuo 4=10265
magnetic films, Kerr effect, longit., S/N ratio 4=26174
magnetic rotation spectra, theory 2=14259
magnetic rotatory power 0=10788
magneto-optical rotation of metal films, meas. 1=10608
manganous halides, tetrahydrates, absorption spectrum in antiferromag. state 0=13695
measurement, polarized light reflection rotation 4=28667
memory film elements, readout 2=13632
metals, interband transitions, theory 2=4109
microwave, in weakly magnetic gases 1=15966
microwaves, double refraction in paramagnetics 0=2982
molecular, calc., and dipole moments 4=12437
molecular crystals, with weak exciton—phono: interaction 1=11349
molecular, quantum theory 4=6514-5
molecules, diamagnetic, Faraday effect, theory 3=6383
molten salts, up to 1100°C, Faraday rot. meas. 3=7206
α-nitriles, alphatic unsat., and electronic struct. 4=17307
observation using optically-dense dispersive media 3=10911
observation, vacuum-stage for low temp. use 4=16222
organic molecules, rotation spectra 4=25605
paramag. crystals, microwave modulation of light 1=1149
paramagnetic salts, Faraday rot. and microwave interactions 2=14651
Permalloy film, longitudinal Kerr effect 4=4265
Permalloy films, Kerr effect and domains 2=18907
Permalloy films, longitudinal Kerr effect 3=13157
Perminvar, Kerr effect, ferromag. domain study 0=13799
photomagnetoelectric effect, isotropic and anisotropic components 1=3718
plasma, appl. to measure transient mag. field distrib. 2=1450
plasma electron density meas. 3=4150
plasma, laser light magnetorotation, rel. to electron density determ. 4=18911
plasma with population inversion, Faraday effect 3=8202
radio sources, extra-galactic 4=20953
rare-earth borate glasses, Faraday rotation 4=26217
rare earth Fe garnets, spectra, $^7F_0 \rightarrow {}^7F_4$ line, and g factor 4=13054

solids, nonlinear, energy considerations 3=13155
spectra splitting in paramag. due to atomic interactions 4=22824
spectropolarimeter, for Faraday effect meas. 3=19026
spin-screw structure 4=26172
thin films, laser output modulation by multiple Kerr effect 4=19273
transformer steel, polar Kerr effect 3=13252
uniaxial crystals, exciton energy levels 1=14567
Voigt effect, due to free carriers in semiconductors 3=6643
Voigt effect, microwave, in paramagnetics 0=21031
Voigt effect in semiconductors, theory and exptal. verification 1=3819
Ag, polarized light reflection rotation 4=28667
Al, polarized light reflection rotation 4=28667
AlSb, i.r. rel. to electron effective masses 3=10816
AlSb, interband Faraday effect 3=8586
AlSb, n-type, i. r. Faraday effect meas. 4=10162
B—NHR and —NH_2 bonds meas. 4=15343
B—S compounds, and bond 4=15344
$Ba(NO_3)_2$, Verdet constant (5780-3650A) 0=2934

Magneto-optical effects—contd
Bi, e.m. transmission, 1.4°K 4=26177
Bi, far i.r. studies 1=1147
Bi, i.r. magnetoreflection in high and low fields 0=20968-9
Bi, i.r. reflectivity in mag. field, quantum effects 4=7110
Bi, magnetoreflection, rel. to Fermi surface 1=17488
Bi, magnetoreflection oscillations 3=8581
Bi_2Te_3, Faraday rotation, i.r. 1=1146
Bi_2Te_3, free-carrier, Faraday effect, in weak fields 1=14577
CaF_2, Faraday rotation by Er^{2+}, Er^{3+}, Gd^{3+} and Nd^+ 4=7103
CaF_2:Ho, Zeeman effect in strong fields 4=7101
$Cd_xHg_{1-x}Te$, magneto-reflection 3=10938
CdS, absorpt. spectrum 2=23527
CdS, in exciton spectrum 1=7559
CdS, Faraday rot. due to free electrons 2=16806
CdS, mag. field effect on exciton absorption 1=19971
CdS, photon momentum effect 0=7997
CdS, sharp lines in absorpt. spectrum 2=8487, 4120
CdS, Zeeman splitting of n = 2 exciton state, direct observation of exciton motion 1=3636
CdTe, i.r. Faraday effect 3=10812
Ce phosphate glasses, Faraday effect at 1.8 and 4.2°K 0=2933
Co films, i.r. surface and interior meas. 3=10919
Co films, magnetization reversal, Kerr effect study 1=20100
Co films, rel. to optical constants 3=10918
Co, u.v., visible and near i.r. regions 0=6171-3
$CoFe_2$ films, Faraday effect 4=22879
$CoFe_2O_4$, Faraday rotation in films 3=15655
$CoFe_2O_4$ films, Faraday effect 4=22879
$CrBr_2$, Faraday rotation 3=15656
$CrBr_3$, rotation of visible light 3=919
$CrK(SO_4)_2 . 12H_2O$, double refraction, X band 4=13022
CsBr and first excited state, spin—orbit splitting 4=28499
$CuSO_4 . 5H_2O$, Faraday effect, anomalous in e.s.r. absorpt. region 4=28870
$CuSO_4 . 5H_2O$, Faraday effect, microwave 4=26173
$CuSO_4 . 5H_2O$, Faraday, X band near e.s.r. 4=30679
Er garnets, Faraday effect 3=918
Eu ferrite garnet, exchange interactions 1=19957
Eu ferrite garnet, exchange interactions 2=23535
Eu ferrite garnet, $^7F_0 \rightarrow {}^7F_4$ absorption of Eu^{3+} 4=17563
Eu ferrite garnets, Faraday effect, freq. depend. 4=1745
Eu garnets, Faraday effect 3=918
EuFe garnet, $^7F_0 \rightarrow {}^7F_4$ line fine struct. 4=13054
EuFe garnet, spectrum, $^7F_0 \rightarrow {}^7F_4$ line fine struct., and dipole transitions 4=13054
Eu_2SiO_4, Faraday rotation 4=4356
Fe films, Faraday effect 1=3822
Fe films, Faraday effect 4=22879
Fe, films, Faraday effect, domain structure 0=13794
Fe films, i.r. surface and interior meas. 3=10919
Fe, films, invest. by Faraday effect 0=4494
Fe, films, longitudinal Kerr effect 3=13157
Fe films, rel. to optical constants 3=10918
Fe, reflectivity change on magnetization reversal, and permittivity tensor 4=22871
Fe, u.v., visible and near i.r. regions 0=6171-3
Fe whiskers, Kerr method observation of domain structures 1=6303
Fe^{57}, γ-ray polarization rot. near Mossbauer absorpt. 4=17571
Fe—35%Ni films, Faraday rotation 3=13156
Fe—Ni films, rel. tomag. process 2=16913
Fe—Si, Kerr effect, domain dynamics 0=10145
GaAs, Faraday effect 4=17565
GaAs, Faraday effect, effective electron mass 0=7872
GaAs, Faraday rotation, electron effective mass 1=2414
GaAs, i.r., Faraday and effective electron mass 3=17986
GaP, i.r. rel. to electron effective masses 3=10816
GaP, n-type and undoped, i.r. Faraday effect meas. 4=10162
GaSb, Faraday effect 4=17565
GaSb, Faraday rotation meas. 3=12936
GaSb, interband Faraday effect 3=8586
Gd, Faraday effect 4=4257
Gd films 1=19954
Gd films, Kerr effect, rel. to temp. 3=2993
Ge, absorpt., crossed-field 4=20456
Ge, anisotropic effect, in n-type 3=10778

Magneto-optical effects—contd
Ge, anisotropic free carrier Voigt effect in n-type 4=15590
Ge, Faraday effect 4=17565
Ge, Faraday effect 1=6203
Ge, Faraday effect for direct transitions 1=8980
Ge, Faraday effect of first 2 magneto-absorpt. lines 2=23531
Ge, Faraday effect theory for direct transition 4=7104
Ge, i.r. Faraday effect 2=6549
Ge, interband Faraday effect 3=8586
Ge, interband Faraday effect in strong, mag. fld. 4=1731
Ge, interband Faraday rot., Voigt effect 2=21230
Ge, interband Faraday rotation, 0-120 kG 3=25441
Ge, magneto-reflection, predicted observation of (111) direct transition exciton 0=13527
Ge, n-type, Faraday effect 3=4964
Ge, optical Faraday effect 1=5045
Ge, photomagnetoelectric effect 0=20889
Ge, reverse biased p—n junction, visible light emission 0=2875
Ge, rotation 3=10772
Ge, 77°K rel. to strain 2=23528
Ge, spectrum and surface charge geometry 4=22695
Ge, strained and unstrained, at 77°K 0=18119
Ge, Voigt effect, free carrier, anisotropic, in n-type 4=26194
H-like atoms, absorpt. in strong field calc. 2=8062
Hg, Faraday rotation near resonance 4=11365
HgSe, magnetoplasma reflection 0=4392
HgSe, magnetoreflection, rel. to electronic band structure 1=17871
Ho garnet, Faraday effect 3=918
Ho garnet ferrites, i.r. Faraday effect 2=685
$HoFeO_3$, Kerr effect rel. to magnetic domains 3=18103
IBr, $^3\Pi - {}^1\Sigma$ transition 0=5932
ICl, $^3\Pi_1 - {}^1\Sigma$ transition 0=5923
InAs, Faraday effect 4=17565
InAs, Faraday rotation, electron effective mass 1=2414
InAs, i.r. Faraday rotation 0=20919
InAs, magnetoreflection, rel. to electronic band structure 1=17871
InAs, n-type, double refraction of i.r. in transverse mag. field 1=3819
InAs, Voigt and Faraday effects in n-type 1=12481
InP, Faraday effect, i.r., in n-type, electron effective mass 0=18049
InP, Faraday effect in i.r., 90°-700°K 4=30622
InP, i.r. Faraday rotation 0=20919
InSb, double refraction of i.r. in transverse mag. field 1=3819
InSb, Faraday effect 1=6203
InSb, Faraday effect 4=17565
InSb, Faraday effect for i.r., 290°-500°K 3=15658
In Sb, Faraday rotation, peak posn. and size at absorption edge calc. 4=28693
InSb, free carrier and interband absorption 3=10917
InSb, i.r. Faraday effect, electron mass energy depend. 0=4361
InSb, magneto-absorption 3=10924
InSb, magnetoplasma reflection 0=4392
InSb, magnetoplasma reflection with polarized light 3=10822
InSb, n-type, Faraday rot. 2=23530
InSb, n-type, i.r. Faraday effect meas. 4=15583
InSb, oscillatory magnetoabsorption 1=17900
InSb, oscillatory rotation, 77° and 296°K 3=10823
InSb, p-type, rel. to electron mobility 2=8488, 10577
InSb, p-type, photoelectromag. effects 0=4370
InSb, photomagnetoelectric effect 0=20889
InSb, spectral distrib. 0=16039
InSb, Voigt and Faraday effects in n-type 1=12481
KCl, F-band Faraday rotation 4=13052
$KCr(SO_4)_2 . 12H_2O$, associated with e.s.r. 4=4268
$MgCl_2 4H_2O$, magnetic refraction of 9375 Mc/s microwaves 0=2982
Mn ferrites, Kerr effect, mag. domains study 3=13276
Mn—B, and other ferromag. materials 0=13757
MnBi magnetic films, oriented, Kerr rot., temp. var. 4=13045
$MnCl_2 . 4H_2O$, Farady effect, anomalous in e.s.r. absorpt. region 4=28870
$MnCl_4 . 4H_2O$, 9275 Mc/s double refraction, α length 4=28696

Magneto-optical effects—contd
- MnF_2, microwave Faraday rotation, 30-300°K 0=3098
- $MnSO_4.H_2O$, Faraday rot. of e.s.r. 4=23050
- $MnSO_4H_2O$, microwave Voigt effect 0=21031
- Na vapour, light beam modulation 4=14324
- NaFe fluoride, Verdet const 3=25547
- Nd ethylsulphate, Faraday effect 0=10232
- Nd ethylsulphate, Faraday effect 3=8714
- Ne, magnetoplasma, Faraday effect, microwave cavity meas. 4=18894
- Ni films, Faraday effect 4=22879
- Ni films, i.r. surface and interior meas. 3=10919
- Ni films, longitudinal Kerr effect 3=13157
- Ni films, rel. to optical constants 3=10918
- Ni, i.r. resonance absorption 0=10046
- Ni, reflectivity change on magnetization reversal, and permittivity tensor 4=22871
- Ni single-crystal films, Faraday rot. 2=8489
- Ni, u. v. reson. 2=23533
- Ni, u.v., visible and near i.r. regions 0=6171-3
- Ni–Fe alloy films, Kerr effect 1=11357-8
- Ni–Fe films, Kerr effect, magnetization reversal obs. 0=13812
- Ni–Fe films, rel. to mag. process 2=16913
- Ni–Fe–Mo films, rel. to mag. process 2=16913
- $NiFe_2$ films, Faraday effect 4=22879
- $NiFe_2O_4$ films, Faraday effect 4=22879
- $Ni_2Fe_2O_4$, Faraday rotation in films 3=15655
- NiO, birefringence rel. to antiferromag. domain structure 3=18109
- Ni–Pd alloys 0=4400
- Ni–Zn Cr ferrites, Faraday effect rel. to permittivity 3=1050
- O_2, Faraday effect, anomalous 0=7772
- O_2, Faraday effect, theory 3=5468
- Pb films, supercond., detection of domain struct. and current flow 2=7512
- $Pb(NO_3)_2$, Verdet constant (5780-3650A) 0=2934
- PbS, band structure meas. 4=25904
- PbS, films, epitaxial, absorpt. lines 3=17984
- PbS, magnetoplasma reflection with polarized light 3=10822
- PbS, photomagnetoelectric effect 0=20889
- Se, Faraday effect in refl., effective mass det. 4=13055
- Si, Faraday effect 1=6203
- Si, Faraday effect, i.r. 3=17985
- Si, Faraday rot. near band edge 2=23534
- Si, photomagnetoelectric effect 0=20889
- Si–Fe crystal, surface magnetization meas. 1=11434
- $Sr(NO_3)_2$, Verdet constant (5780-3650A) 0=2934
- Te, i.r. absorption, in mag. field 1=12495
- Y garnet, Faraday effect 3=918
- Y garnet ferrites, i. r. Faraday effect 2=685
- $YFeO_3$, Kerr effect rel. to magnetic domains 3=18103
- $Y_3Fe_5O_{12}$, Faraday effect 0=13677

Magnetoresistance
- Advance and Evanohm wires, low-temp., in fields up to 50kG 4=30609
- alloys, theory, spin–orbit effects on Fermi surface 1=2384
- alloys of transition elements in normal metals, low temp. anomalies 3=8496
- anisotropic cubic crystals, rel. to magnetoconc. effect 1=11263
- anisotropy, caused by population change 4=4130
- applications 1=3715
- carbons and graphite-bromine, negative 4=20327
- conductors, fluctuating elec. fields and steady mag. fields, Boltzmann eqn. 0=13574
- Corbino disc, experiment and theory 1=1886
- crystals, magnetic breakdown 2=675
- cylindrical Fermi surface 0=567
- d.c. and microwave, sensitive measuring method 0=6068
- devices, for d.c. to a.c. conversion 4=22737
- diamond, p-type 1=17728
- diamond, rel. to valence-band struct. 2=23382
- diamonds, p-type 0=6116
- effect of random inhomogeneities 0=17982
- even-valence metals, Fermi surface "necks" 3=25243
- ferrites, effect of compensation point 3=6719
- ferrites, measurement near Curie point 1=12414
- ferrites, temperature variation anomalies 0=6244

Magnetoresistance—contd
- ferromag. metals, on localized d-electron model 3=827
- ferromag. thin layers, hysteresis loops at low temps. 0=9938
- ferromag. thin layers at low temp. 0=9937
- ferromag. thin sheets, effect on e.m. wave propag. 0=13856
- ferromagnetic metals, anomalous, theory 2=10439
- ferromagnetic metals, in r.f. mag. fields 1=7617
- general case, rel. to Fermi surface 1=17615
- geometry and size effects 0=9935
- graphite, annealed pyrolytic, single-crystal characteristics 2=4035
- graphite, band model 1=4975
- graphite, effect of electron bomb. 0=20854
- graphite, nonlinear, of thermal and nonthermal origin 4=15518
- graphite, prepared by methane pyrolysis 1=17525
- graphite, pyrolytic, carrier density and mobility, temp. depend. 1=12447
- graphite, pyrolitic, rel. to orientation degree 2=12494
- graphite, pyrolytic, rel. to structure 3=826
- graphite, pyrolytic, unusual 4=20369
- graphite, 290°-420°K, atmospheric to 9000 atm. 4=6926
- Kramers-Kronig relations for magnetocond. tensor 2=622
- magnetite (0-100°C) 0=15890
- meas., flat samples of cubic materials, of arbitary shape 1=11997
- measurement, ballistic method, for weak mag. materials 4=7241
- measurement, depend. on specimen geometry and probes 1=14377
- measurement, ferromag. films, rotating mag. field technique 3=14470
- measurement, in pulsed mag. field, single crystals 4=2928
- metals and alloys, mag., anomalies, spin-dependent scatt. 3=25319
- metals, effect of correlations between carriers, theory 0=568
- metals, rel. to electronic structure 1=2383
- metals, even-valent, anisotropy and Fermi surface topology 1=19746
- metals, in high mag. fields, 4 and 80°K 0=9936
- metals, Kohler's rule, generalisation, calc. 4=28527
- metals, and mag. breakdown 4=26000
- metals, rel. to mean free path calc. 2=6297
- metals, with nearly equal electron and hole densities 0=2848
- metals, in pulsed fields up to 220 kG 0=11663
- metals and semimetals, oscill. due to optical phonon scatt. 2=18639
- metals, surface resistance, oscillatory dependence on weak mag. field 0=20874
- metals, temp. depend. for arb. dispersion law 4=15514
- metals, theory rel. to open-electron orbits 4=10033
- metals, transverse conductivity oscillations 0=11653
- mono- and polycrystals, rel. to magnetostriction 0=8056
- multivalley model with (110) ellipsoids of general shape 0=1618
- negative, rel. to charge carrier scatt. 3=6575
- negative, in high impurity conc. semicond. 2=12508,23280
- organic semiconductors, narrow-band, calc. 4=12920
- oscillatory behaviour, low temp., free-electron quantum model 1=1009
- 78-Permalloy 1=6533
- Permalloy films, magnetic switching, measurements 1=6329
- Permalloy films, rel. to magnetization process 3=15811
- Permalloy films, magnetoresistance effect in magnetization reversal 1=14722
- Perminvar 1=6533
- plate, transverse field 4=27457
- powdered solids, apparatus 0=9946
- probe to measure field strengths 3=14721
- quantum plasma, anisotropic, conductivity tensor 4=22546
- quantum theory for weak fields 1=14382
- semiconducting plate, due to carrier density change 3=20278
- semiconductor devices, magnetosurface effect appl. 1=14405
- of semiconductor, electrodeless meas. technique 3=342
- semiconductor multiplier for power meas. 4=11493
- semiconductors, extrinsic nondegenerate 2=627

Magnetoresistance—contd
- semiconductors, field effect meas. in transverse mag. field 0=15920
- semiconductors, heterogeneous, symmetrical props. 0=9950
- semiconductors, hopping cond., weak field 3=15564
- semiconductors, due to hot carriers in strong mag. fields 3=10760
- semiconductors, rel. to impurity conduction and localized spins 3=10737
- semiconductors with impurity gradients, field-dependence 2=23278
- semiconductors, intrinsic, in crossed weak fields, polar model 1=11286
- semiconductors, ionic, in strong crossed elec. and mag. fields 3=25339
- semiconductors, lab. meas. method 4=12878
- semiconductors, negative 2=16690
- semiconductors, new oscillation mode 4=28553
- semiconductors and plasma 2=18659, 21120
- semiconductors and plasmas, stratified, at high fields 4=12866
- semiconductors and semimetals oscillation in strong mag. fields 3=6569
- semiconductors and semimetals, oscillations in strong mag. fields 2=21119
- semiconductors, transverse, multi-band calc. 3=10754
- in strong fields, calc. for electron scatt. by delta function impurities 0=13575
- theory 1=11262
- theory, without " quantum effects", relaxation time 0=17988
- thin plate, in long. field, theory 0=9935
- III–V semiconducting compounds rel. to conduction band structure 1=17672
- transition metals in high-field limit 2=3992
- Ag, anisotropy 0=9939
- Ag antimony telluride 4=22722
- Ag, effect of plastic deformation 2=2122
- Ag, rel. to Fermi surface 0=15893
- Ag halides 3=12940
- Ag, transverse, rel. to open-orbit theory 4=10033
- AgBr, meas. at 2°K and up to 18 kG 3=8529
- Ag–Pd at low temp. 0=9942
- Al 0=9945
- Al, anisotropy in strong fields at 4.2°K 3=22903
- Al containing Mn or Fe at low temps. 4=20333
- Al, and crystal point defects, due to α-rays and cold working, temp. var. 3=17816
- Al, dimensional and purity effects at low temp. 3=15554
- Al, effect of correlations between carriers, calc. 0=568
- Al, 4° to 30°K 4=12851
- Al, Kohler's law, deviations 4=4115
- Al, Kohler's rule, generalisation, calc. vs. meas. 4=28527
- Al, low-temp., up to 20 kG 3=25332
- Al, oscillatory, rel. to thermal conductivity 3=20123
- Al, Sondheimer, oscillations 3=4908
- Al–Fe, 4. 2°K to Curie temp. 0=4316
- AlSb–InSb system, solid solutions, elec. props, 80-1000°K 0=15943
- As, nonohmic, low-temp., thermal origin 3=8512
- Au, anisotropy 0=9939
- Au, anisotropy, rel. to Fermi surface 0=7913
- Au, effect of plastic deformation 2=2122
- Au, rel. to Fermi surface 0=15893
- Au–Co, at low temp. 0=7912
- Au–Mo, at low temp. 0=9942
- Au–Pd, at low temp. 0=9942
- Au–Rh, at low temp. 0=9942
- Be, 4. 2°K, and Fermi surface 4=6920
- Bi 0=15891
- Bi 3=22904
- Bi, anomalous, classical explanation 2=21105
- Bi, directional depend. 2=23244
- Bi, hydrostatic pressure dependence 0=20913
- Bi, isothermal transverse, at liq. He temps. 3=25354
- Bi, low temps., non-linear and phonon Cherenkov rad. 4=15410
- Bi, new effect at low temp. 2=6417
- Bi, nonlinear 2=23250
- Bi non-linear rel. to electron—phonon interaction 2°-4°K 3=10803
- Bi, nonlinear, of thermal and nonthermal origin 4=15518
- Bi, nonohmic, low-temp., thermal origin 3=8512

Magnetoresistance—contd
- Bi, and pinch effect 4=4140
- Bi, in proposed device for electric oscillations 2=21112
- Bi, self-, calc. 4=20353
- Bi, Shubninov–de Haas effect 2=21104
- Bi, thin films, thermal evolution 3=8517
- Bi–Sb alloys, conc. dependence 2=4029
- Bi–Sb alloys, magneto-thermal resistance 3=10806
- Bi–Sb alloys, 78°-295°K 3=4958
- Bi–Sb alloys, tensor, 77° to 300°K 4=10042
- Bi–Sb non-linear rel. to electron—phonon interaction 2°-4°K 3=10803
- Bi–Sb, 75-500°K 4=26034
- $Bi_{0.92}Sb_{0.08}$, temp. effect 4=26033
- Bi:Sn (0. 2 at. %), ang. var. symmetry 4=20354
- Bi–Sn, 75-500°K 4=26034
- Bi–Te alloys 0=15892
- Bi–Te, 75-500°K 4=26034
- Bi_2Te_3, γ-irrad. 3=22712
- Bi_2Te_3, oscillatory, 77°, 4. 2°, 2. 08°K 4=6947
- C polycyclic compounds and structures 1=3763-4
- C, pyro layers, effect of heat treatment 3=20272
- Cd, oscills., low temp. 4=6923
- Cd, pressure depend., Fermi surface 4=4023
- Cd_3As_2, Cu doped 3=2906
- Cd_3As_2, n-type, 95° to 700°K 2=23374
- CdS, rel. to carrier props. 3=8523
- CdS, negative, var. with Cl doping 4=12886
- CdSb, rel. to band structure 3=10811
- CdSb, at low temp. 2=641, 8355
- CdSb, monocrystals 0=15946
- CdSb, pure and doped 3=17971
- CdSb, semiconducting, two forms 2=4033
- CdSb, temp. and field depend. 4=26035
- Co, cold-rolled strips 0=1786
- Co, evap. layers, coercive force 0=16139
- Co–Cu solid soln. (0. 5, 1. 0, 2. 0 at. %) 0=10092
- Cr, 4. 2–78°K, up to 27 kOe 0=11661
- Cr–Te, above Curie point 1=1237
- CrTe, temp. var. 4=22982
- Cu alloys at He temperatures 4=10026
- Cu, anisotropy 0=9939
- Cu, and crystal point defects, due to α-rays and cold working, temp. var. 3=17816
- Cu, effects of O_2 and work hardening 0=15894

  specific heat, electronic, of γ-phase 2=2055
  spectrochem. anal. 2=19177
  spin resonance in Si 0=4514
  spin–spin relaxation time of Mn^{2+} in diamag. crystals 0=6266
  valency in α and β brasses from susceptibility 3=23140
  Fe^{3+}, e.p.r. in $MgAl_2O_4$ spinel 3=8711
  in Ge, photoconductive recombination props. 2=8398
  α-Mn, antiferromagnetism, hyperfine coupling 4=20568
  α-Mn, magnetic entropy and specific heat, and Debye temp. 4=25858
  Mn e.s.r. in GaAs at 77°K, meas. and theory 3=3177
  α-Mn, mag. Brillouin zone effects on magnetoresistance, thermoelec. power 3=20555
  α- and β-Mn, n.m.r. rel. to relax. mechs. 4=20619
  Mn, nuclear antiferromag. double reson. in $MnCO_3$ 4=13347
  Mn (II) absorption spectra in fused halides 2=15594
  Mn II, d^5p config. 1=806
  α Mn M^{55} n.m.r., 1.5° to 4.2°K 3=15960
  Mn^+, spectrum, and Zeeman effect 4=25503
  Mn^{++}, in GaS, e.s.r. 3=8713
  Mn^{++} ions in aqueous soln., proton relaxation and hydration 1=12901
  Mn^{2+}, acoustic e.s.r. and relax time 4=1867
  Mn^{2+}, in aqueous solutions, proton spin–lattice relaxation 1=15908
  Mn^{2+} in cubic cryst. field, ground state splitting 4=25827
  Mn^{2+} in cubic crystal field, optical spectrum and ground-state splitting 4=20463
  Mn^{2+} in cubic environment, spin–lattice relax. 2=18955
  Mn^{2+}, e.p.r. in glasses 3=20651
  Mn^{2+}, e.p.r. in $MgAl_2O_4$ spinel 3=8711-2
  Mn^{2+}, e.p.r. in MgO, additional biquadratic exchange term in spin Hamiltonian 3=20627
  Mn^{2+}, e.s.r. in α-Al_2O_3, appd elec. fld effect 4=26406

Manganese—contd
  Mn^{2+}, e.s.r. in CaO 3=3181
  Mn^{2+}, e.s.r. in CdSe 3=11115
  Mn^{2+} e.s.r. in KF 4=23049
  Mn^{2+}, e.s.r. in LiF, at X-band and room temps. 4=4410
  Mn^{2+}, e.s.r. in cubic MgO, first-order forbidden transitions 4=13325
  Mn^{2+}, e.s.r. in cubic MgO, "forbidden" hyperfine transitions 4=10327
  Mn^{2+} e.s.r. in NaCl with Ca^{2+}, Cd^{2+} admixtures 4=28877
  Mn^{2+} e.s.r. in NaN_3, KN_3, and RbN_3, rel. to crystal orientation 4=23051
  Mn^{2+}, e.s.r. in $SrCl_2$, line intensities ang. depend. 4=26410
  Mn^{2+}, e.s.r., in SrS 3=5042
  Mn^{2+} e.s.r. in $(Zn_{1-c} + Cd_c)$ S and $Zn(S_{1-c} + Se_c)$ wipe-out number 4=26370
  Mn^{2+} e.s.r. in $Zn_2P_2O_7$, spectrum, phase transition study 4=26572
  Mn^{2+} impurity in Ca fluorophosphate, absorpt. spectrum 3=13168
  Mn^{2+}, line broadening of P^{31} n.m.r. absorpt. in H_3PO_4 3=13316
  Mn^{2+} pairs in Mn, ZnF_2, e.s.r. 3=3176
  Mn^{2+}, in paramag. salts, S-state, relax. time 1=3927
  Mn^{2+} paramagnetic resonance 1=11480
  Mn^{2+}, paramagnetic resonance, in alkali halide impurities 1=14789
  Mn^{2+}, quadrupole antishielding factor 3=12772
  Mn^{2+} in ZnS monocrystals, absorpt. spectrum 4=22875
  Mn^{3+}, e.s.r. in rutile, spin Hamlt. analysis 4=4411
  Mn^{4+}, in Al_2O_3, R line splitting in elec. fields 4=9820
  Mn^{4+}, e.s.r. in MgO 4=28876
  Mn^{4+}, e.s.r. in rutile, h.f.s. of $Ti^{47,49}$ 4=23057
  Mn^{4+} e. s. r., sharp line fluorescence and thermoluminescence in α-Al_2O_3 4=26236
  Mn^{50}, lowest T = 0 states 2=7925
  Mn^{55} atom, sign of ground state h.f.s. 2=8061
  Mn^{55}, n. m. r. in $KMnF_3$, antiferromag. 4=13345
  Mn^{55} n. m. r. in $MnFe_2O_4$, temp. var., and sublattice mag. 4=13240
  Mn^{55}, n.m.r. in $MnFe_2O_4$, temp. var. 4=13290
  Mn^{55}, n. m. r. in $RbMnF_3$, antiferromag., low temps., freq. pulling 4=13346
  Mn^{56} activity in steel wires, neutron flux meas. 2=12262
  in Zn borate, luminescence activator 2=2254
Manganese compounds
  alloys, magnetism, electronic model 1=20039
  bond meas. from e.s.r. h.f.s. 4=20095
  carbides, ternary, with Sn, Zn 0=16324

Mn–Bi powders, magnetic properties 1=7750
MnBi alloy, residual mag. induction, temp, instability 4=7266
MnBi, domain structure 0=13743
MnBi, mag. nucleation near dislocations 3=5009
MnBi, mag. reversal processes in particles 3=8657
MnBi, mag. switching rel. to particle size 3=13251
MnBi, magnetic films, oriented, Kerr rot., ferromag. reson., temp. var. 4=13045
MnBi, magnetic props., heat treatment effects, and order—disorder transform. 4=1798
MnBi, magnetostriction and anisotropy, temp. dependence 1=6333
MnBi, n.m.r., zero ext. field 3=3198
$MnBr_2$, absorption spectra 0=16058-9
$MnBr_2$, internal electric-field gradient, calc. 1=11143
$MnBr_2$, mag. props. 0=13759
$MnBr_2$, optical absorption, ligand field theory 0=1728
$MnBr_2$, paramag. susceptibility in 0.5 MOe fields 2=23632
$MnBr_2$, sp. heat and magnetic ordering 4=3993
$MnBr_2.4H_2O$, absorption spectrum 0=13695
$MnBr_2.4H_2O$, adiabatic magnetization, cooling effect 3=15908
$MnBr_2.4H_2O$, mag. susceptibility, 1-300°K, phase transitions 0=16144
$MnBr_2.4H_2O$, ordered state 1.2°-20°K, spectral study 4=4261
$MnBr_4^{2-}$ in acetonitrile soln., spectrum, and Mn^{2+} electronic struct. 4=15349
$MnCO_3$, antiferromag. ordering, optical absorption effects 4=17574
$MnCO_3$, antiferromag. reson., far i.r. 4=13302
$MnCO_3$, antiferromag. reson., 4.5-15 kMc/s 4=4397
$MnCO_3$, antiferromag. reson. saturation 4=20578
$MnCO_3$, antiferromag. state, neutron diffraction study 0=11851
$MnCO_3$ crystallization in $MnCO_3$—RCl—H_2O, [R = Na, Li, K, Ca, Mn, Co] 3=18267
$MnCO_3$, Curie point shift with pressure 2=18926
$MnCO_3$, dissociation and mag. susceptibility 1=14677
$MnCO_3$, e. s. r., nuclear freq. pulling 4=30737
$MnCO_3$, high-freqn. ferromag. resonance 3=13290
$MnCO_3$, mag. moment, superexchange interaction 0=11902
$MnCO_3$, magnetic anisotropy 2=6666
$MnCO_3$, magnetic anisotropy 3=3098
$MnCO_3$ nuclear antiferromag. double resonance 4=13347
$MnCO_3$, paramag. susceptibility in 0.5 MOe fields 2=23632
$MnCO_3$, paramagnetic resonance 1=12560
$MnCO_3$, r.f. ferromag. suscept. meas. 3=11051
$MnCO_3$, specific heat, rel. to mag. props. 2=4237
$MnCO_3$, specific heat rel. to mag. props. 3=3145
$MnCO_3$, specific heat, 1.6° to 70°K, rel. to antiferromag. transition 3=17659
$MnCO_3$, weak ferromagnetism 0=18205
$Mn_2(CO)_{10}$, crystal structure 3=13489
$MnC_2O_4.2H_2O$, Cotton—Mouton—Voigt effect 4=29777
$MnCl_2$, absorption spectra 0=16058-9
$MnCl_2$—alkali chloride system, paramag. resonance of Mn 1=9054
$MnCl_2$, antiferromagnetic resonance fields and lidewidths as function of temp., frequency, orientation 1=9051

Manganese compounds—contd
$MnCl_2$ aqueous solutions, Overhauser effect, rel. to temp. 4=11219
$MnCl_2$ conc. soln., resistance meas. 2=11385
$MnCl_2$, e. s. r. 4=10315
$MnCl_2$ e.s.r. in LiCl—KCl 4=10315
$MnCl_2$, e.s.r. in molten alkali halides 4=11215
$MnCl_2$ e.s.r. in $ZnCl_2$ 4=10315
$MnCl_2$ frozen solutions, Mn^{2+} e. s. r. rel. to composition 4=30735
$MnCl_2$, geometry and bonding, from deflection in elec. field 4=22378
$MnCl_2$, heat capacity and entropy, 11–300°K 2=6272
$MnCl_2$, liq. He temps., specific heat in appl. mag. fields 3=2731
$MnCl_2$ magnetic susceptibility (1.5°-20.4°K) 1=14765
$MnCl_2$, n.m. relax. meas. 3=4282
$MnCl_2$, optical absorption, ligand field theory 0=1728
$MnCl_2$, precip. in NaCl, effect on thermal cond. 1=14190
$MnCl_2$, specific heat, 1.3° to 4.2°K in 50kG fields 4=20214
$MnCl_2.4H_2O$ absorption spectrum 0=13695
$MnCl_2.4H_2O$, e. s. r. 4=10315
$MnCl_2.4H_2O$, Faraday effect, anomalous in e.s.r. absorpt. region 4=28870
$MnCl_2.4H_2O$, heat capacity anomaly at 1.60°K 1=12356
$MnCl_2.4H_2O$, mag. phase transitions 0=10250
$MnCl_2.4H_2O$, mag. susceptibility, 1-300°K, phase transitions 0=16144
$MnCl_2.4H_2O$, mag. susceptibility and relaxation 0=10095
$MnCl_4.4H_2O$, magnetic double refraction, 9275 Mc/s α length 4=28696
$MnCl_2.4H_2O$, ordered state 1.2°-20°K, spectral study 4=4261
$MnCl_2.4H_2O$, rotation of plane polariz. at 9150 Mc/s 0=11945
$MnCl_2.4H_2O$, single-crystal, mag. susceptibility and paramag. relaxation 0=10230
$MnCl_2.4H_2O$, specific heat and para—antiferromag. transition 1=17417
MnCo ferrite, mag. props. at low temps. 1=20132
MnCo ferrite, mag. props. at low temps. 3=5023
MnCo ferrite, magnetocryst. anisotropy 2=747
Mn–Co, magnetically dilute systems 0=3014
$(MnCo)_2B$, Curie points and magnetic moments 3=8637
$Mn_xCo_{80-x}C_{20}$, mag. props., structure 0=3010
$Mn^{2+}Co_2O_4$, spinel, superexchange 4=13274
Mn—Cr, Brillouin zone effects on elec. cond. 3=20554
Mn—Cr, elec. conduct., mag. structure and suscept. meas. 4=29146
$MnCr_{2-t}Al_tO_4$, mag. susceptibility, temp. depend., and crystal structure 0=1777
$Mn_xCr_{1-x}B$, magnetic props. 1=20063
$MnCr_2O_4$, ferrimagnetic cone angle, n.m.r. meas. 4=23019
$MnCr_2O_4$, mag. props., rel. to spin configuration 0=16145
$MnCr_2O_4$, mag. structure, neutron diffr. data 3=11101
$MnCr_2O_4$, mag. structure by neutron diffraction 3=1112
$MnCr_2O_4$, mag. structure, theory 2=12669
$MnCr_2O_4$, mag. transitions 2=12671
$Mn_xCr_{1-x}O_2$, saturation magnetization and lattice parameters 1=11431
$Mn_{1-x}Cr_xSb$, exchange anisotropy 0=10125
$Mn_{0.2}Cr_{0.8}Sb$, mag. props., neutron diffraction study 0=3043
$Mn_{1.9}Cr_{0.1}Sb$, antiferromagnetic—ferrimagnetic transition, meas. 3=17022
$Mn_{2-x}Cr_xSb$, elec. resist. changes rel. to mag. transitions 4=1617
$Mn_{2-x}Cr_xSb$, exchange inversion, ferri- to antiferromagnetic transition 1=6374
$Mn_{2-x}Cr_xSb$, exchange inversion, ferri- to antiferromagnetic transition 1=6374-5
$Mn_{2-x}Cr_xSb$, exchange-inversion magnetization theory 0=18206
$Mn_{2-x}Cr_xSb$, exchange inversion, spiral spin config. 2=6677
$Mn_{2-x}Cr_xSb$, ferrimag. and antiferromag. 3=13282
$Mn_{2-x}Cr_xSb$, ferrimag. —antiferromag. transition 4=17661
$Mn_{2-x}Cr_xSb$, x = 0.023-0.10, mag. structure 3=23197
$Mn^{2+}_{1+x}Cr^{3+}_{2(1-x)}Ti^{4+}_xO_4(0.5 < x < 1)$, ferrimag., liquid He temp. 4=26339
Mn–Cu alloys, lattice distortion of Mn 2=23863
Mn—Cu alloys, mag. susceptibility rel. to temp. 3=3081
Mn–Cu alloys, paramagnetism, above m.p. 3=23906
Mn—Cu alloys, specific heat rel. to temperature, theory 3=8358

Manganese compounds —contd
Mn—Cu, antiferromagnetic transition, from specific heat, Mn rich 4=13270
Mn—Cu, elastic constants 1=9081
Mn—Cu, elec. cond., effect of short range spin correl. 4=1554
Mn—Cu ferrite, hysteresis, rect. loop developt. at low temps. 4=28841
Mn-Cu, mag. susceptibility, internal friction 2=12737
Mn—Cu, mechanical, dilatational rel. to distorsional strain ratio 4=11269
Mn–Cu, vapour pressure study 4=2898
Mn–Cu –Al and Mn –Cu –Ge alloys, paramagnetism of Mn 4=7219
MnF_2, absence of antiferromag. domain walls 2=758

Mn—Fe—Cr, Brillouin zone effects on elec. cond. 3=20554
$MnFe_{2-t}Cr_tO_4$, crystal and mag. structure, by neutron diffraction 0=1797
$MnFe_{2-t}Cr_tO_4$, high-field magnetization study 1=20146
$MnFe_{2-t}Cr_tO_4$ (t > 0), atomic magnetic moments, screw arrangements 1=20037
$(Mn_xFe_yNi_z)Fe_2O_4$, ferromagnetic crystalline anisotropy 1=14696
$MnFe_2O_{4+x}$, cation distrib. in spinel lattice 0=3239
$MnFe_2O_4$, ferrimagnetic, temp. var. of sublattice mag., from Mn^{55} n.m.r. 4=13240
$MnFe_2O_4$, low-field magnetization, temp. depend. 3=13271
$MnFe_2O_4$ magnetic relaxation 0=13743
$MnFe_2O_4$, Mn^{55} n.m.r. 3=15965
$MnFe_2O_4$, $Mn^{3+}O_6^{2-}$ octahedra, tetragonally distorted 2=3913, 21520
$MnFe_2O_4$, n.m.r., ferrimag. reson., temp. var. 4=13290
$MnFe_2O_4$, n.m.r. of Mn^{55} and ferrimag. resonance 4=15667
$Mn_{0.6}Fe_{2.4}O_4$, mag. relaxation, wall stabilization, var. cation vacancy conc. 4=10291
$MnFe_2O_4$, n.m.r. of Mn^{55} meas. 4=26453
$MnFe_3O_4$, magnetocrystalline anisotropy, 4° to 225°K 3=1028
$Mn_xFe_{3-x}O_4$ conductivity, electrical 4=1548
$Mn_xFe_{3-x}O_{4+y}$, ferrimag. relaxation 2=4243
$Mn_xFe_{3-x}O_4$, ferrimagnetic reson., 1.5-300°K 4=13293
$Mn_xFe_{3-x}O_4$, ferromagnetic props 4=13195
$Mn_xFe_{3-x}O_4$, mag. anisotropy, magnetoresistance 3=13270
$Mn_xFe_{3-x}O_4$, magnetic anisotropy, one ion model 4=15652
$Mn_xFe_{3-x}O_{4+y}$, magnetic relaxation spectrum 1=17976
$Mn_xFe_{3-x}O_4$, Mössbauer effect, rel. to magnetic properties 4=3962
$Mn_xFe_{3-x}O_{4+\gamma}$, magnetic after-effect 3=1036
$Mn_xFe_yO_4$, specific heat, 1.5-6°K anomaly 3=15435
$Mn_xFe_{3-x}O_4$ spinels, triangular moment arrangements 1=6352
$Mn_xFe_{3-x}O_4$, mag. anisotropy, origin 3=11058
$Mn_xFe_{3-x}O_4$, magnetostriction consts. 3=1031
$Mn_xFe_{3-x}O_4$, neutron-diffraction study 3=1114
$Mn_xFe_{3-x}O_{4+\gamma}$, permeability and satur. magnetization 2=746
$Mn_xFe_{3-x}O_{4+\gamma}$, relaxation spectrum 3=1037
$Mn_xFe_{3-x}O_{4+y}$ spinels, lattice consts. 4=10541
$Mn_xFe_{3-x}O_{4+y}$, time decrease of permeability 0=11887
$Mn_xFe_{3-x}O_{4+\gamma}$ (x > 1), disaccommodation spectrum, role of Fe^{2+} and cation vacancies 4=13237
$Mn_{1.03}Fe_{1.97}O_4$, crystal structure 3=13463
$Mn_{1.16}Fe_{1.84}O_4$, elec. props., heat treatment depend. 3=22949
$Mn_xFe_{3-x}O_4$, x = 0 to 1.9, magnetic props. 0=2998
$Mn_{1+x}Fe_{2-x}O_{4+y}$, ion distrib. and valencies, Curie temp. and mag. moment 0=11888
$Mn_{1+x}Fe_{2-x}O_4$, remag. expts. 0=3076
Mn_2FeO_4, space gp., structure meas., ferrimag. intensity calc. by neutron diffn. 4=28842
$(MnFe_2O_4)_{1-y}(Fe_3O_4)_y$, electrical conductivity 1=12425
$MnFe_2O_4$: Mn_3O_4, magnetoresist., quadratic law 1=14380
Mn—Ga, ϵ phase, mag. props., temp. var. and lattice consts. 3=15900
Mn – Ga (38%), ζ phase ferromagnetism, temp. var., crystal structure 4=4363
$MnGa_2O_4$, spinel structure 1=15093
Mn—Ge, 21·8—35·7 at. % Ge, mag. props., four phases 1=20043
$Mn_{2.35}Ge$, antiferromagnetic props. and structure 1=1245

Manganese compounds—contd
$Mn_{2.65}Ge$, mag. moment rel. to sublattice metallic and covalent nature 3=1005
$Mn_{3.4}Ge$, face-centred tetragonal phase, magnetism 1=15144
Mn_3GE_2, antiferromag. and ferromag. props. 2=8604
Mn_3Ge_2, magnetic properties 0=6220
Mn_5Ge_2, ferrimag. props., temp. depend. 1=12544
Mn_5Ge_2, ferrimagnet, compensating, with unidirectional mag. properties 4=23020
Mn_5Ge_2 ferrimagnet, Hall effect near compensation point, expt. and theory 4=26053-4
Mn_5Ge_2, magnetiz. curves, anomalies 3=15775
Mn_5Ge_2, magnetoresistance, 0° to 200°C, 16 kOe 3=13028
Mn_5Ge_2, magnetoresistance, odd component 4=4119
Mn_5Ge_3, Curie point rel. to pressure 2=12753
Mn_5Ge_3, domain structure 3=23481
Mn_5Ge_3, domain struct. and mag., near Curie temp. 3=13250
Mn_5Ge_3, domain structr. and mag. props. 3=1086
Mn_5Ge_3, domain structure rel. to external mag. fld. 3=3107
Mn_5Ge_3, ferromag. domains 2=12769
Mn_5Ge_3, ferromag. props. 2=8604
Mn_5Ge_3, mag. anisotropy 3=23154
Mn_5Ge_3, mag. moment rel. to sublattice metallic and covalent nature 3=1005
Mn_5Ge_3, mag. structure near Curie point 4=10281
Mn_5Ge_3, mag. structure, by neutron diffr. 4=4364
Mn_5Ge_3, Mn^{55} n.m.r. 3=15961
Mn_5Ge_3, n.m.r., mag. field effects, liquid He temps. 4=1906
MnH, $^7\Sigma$ term, multiplet splitting 3=6388
MnH_4 Tutton salt, spin—lattice power transfer parameter 1=9066
$Mn(HCO_2)_2.2H_2O$, linear chain antiferromagnetism, rel. to crystal structure 4=17671
$Mn(HCO_2)_2.2H_2O$, mag. susceptibility, low-temp. 4=28769
$Mn(H_2O)_6^{2+}$, e.s.r. in aqueous glass 3=6748
$Mn(H_2O)_6^{2+}$ solns., e.s.r. linewidths 2=2732
$MnHPO_4.3H_2O$, spec. ht. and proton resonance, no anomaly at mag. transition 1=14179
MnHg, antiferromag., elec. and structure props. 1=20166
MnHg, crystal distortion and magnetic transition, -75°C 3=6860
Mn_2Hg_5, prep. and crystal structure 2=10878
MnI, analysis of spectrum 4=15281
MnI_2, internal electric-field gradient, calc. 1=11143
MnI_2, mag. ordering at low temps. 2=8661
Mn–In alloys, structure and magnetism 2=23685
Mn_3In, ferrimag. props., below 583°K 2=23685
$MnKF_3$, crystal growth, Czochralski method 1=14990
$Mn_{1-x}Li_xSe$, mag. props. 0=11832
$Mn_3Li_2ZnO_8$, crystal struct., atomic, thermal transform. 4=26656
Mn—Mg alloy, tensile and compressive creep deformation, effect of grain size 4=30781
Mn–Mg ferrite, powder-figure study of domains 1=17977
Mn—Mg ferrite, rectangular, switching rel. to grain size 4=28843
Mn—Mg ferrites, rect. hysteresis loop, rel. to composn. 4=15654
MnMg ferrite, approach to mag. saturation 2=21336
MnMg ferrite, effective anisotropy meas. 2=8654
MnMg ferrite (Ferroxcube D.1.), magnetocrystalline anisotropy and coercivity 1=20127
MnMg ferrite (Ferroxcube D.1.), relaxation, temp. depend. 1=20128
MnMg ferrite, hysteresis loop rectangularity 1=20133
MnMg ferrite, mag. domain wall velocity 1=14736
MnMg ferrite, magnetic props. 1=12537
MnMg ferrite, magnetic props. 1=14734
MnMg ferrite, prep. and props. of monocrystals 2=4382
MnMg ferrites, hysteresis loop rectangularity, temp. depend. 0=6240
MnMg ferrites, internal demagnetization, hysteresis loop rectangularity 0=6241
MnMg ferrites, prep. and props. of monocrystals 1=20441
MnMg ferrites, squareness of hysteresis loops 0=13823
MnMgAl ferrite, use in linear-accelerator isolator 0=12656
Mn—Mg—Co ferrite, crit. microwave field strength 3=3160
Mn–Mg–Co ferrite, ferromag. resonance 2=14815

Manganese compounds—contd
MnN_4 mag. symmetry near Curie point, with total moment $\neq 0$ 4=22966
Mn_4N, electron number of N atom 3=12890
Mn_4N, mag. props. rel. to electron structure 2=16923
Mn_4N, mag. structure, neutron diffr. study 0=11850
Mn_4N, Mn^{55} n.m.r. 3=15961
Mn_4N-type cpds., mag. structure 2=8603
$Mn_4^{55}N$, n.m.r., 2 sites 4=23073
$MnNH_4$ Tutton salt, mag. behaviour below 1°K 0=13738

crystal, two layered with non-coincident optic axes, operation conditions 4=11830
crystals, figure of merit, meas. 3=19476
crystals, scattering losses rel. to particle size 2=8510
cylinder laser, energy density distribution 3=14803
deflector, fast, digital, using double refraction of $CaCO_3$ 4=16228
design, using computer program 4=24890
detectors, InSb, for 7 μ region 4=19279
devices, review 4=19258
dielectric, nonlinear, axial mode difference frequency generation 3=24508
dielectric polarization, due to 2-photon interaction 4=20403
difference freq. obs., with lamp, in KDP crystal 3=18955
diffraction effects, ruby with slit in Fabry—Perot system 4=8996
double-quantum stimulated emission device, theory 4=24884
dynamic behaviour of oscill., theory 3=17079
effect on plasma, driven oscills. scatt of second laser 4=21509
effects, anthracene luminescence, intensity var. 4=15620
effects, anthracene, photoelectricity, carrier release mechanism 4=7077
effects on biological materials, free radical prod. 4=26980
effects, He, Ar, breakdown at high pressures 4=8654
effects, ion emission from Mg, Zn, Pb, velo. var. with pulse height 4=19111
effects on liquids, boiling bubble prod. and light scattering 4=2895
effects on liquids, double refraction, Kerr type 4=18198
effects, luminescence induced in dilute organic solns., double photon mechanism 4=5193

Masers—contd
  optical—contd
    effects, nitrobenzene Raman spectrum, two-step process 4=5191
    electron accelerators, use in 2=7684
    electron thermionic emission, induced by laser beam 3=19304
    electronic and mutual components of stimulated emission 4=8972
    electrons, scattered by intense polarized beam, obs. possibility 3=12448
    emission time-resolution by ultra-rapid photography 3=12341
    energy level identification by spectroscopic techniques 3=24518
    energy loss, due to self-stimulated emission 4=24886
    energy meas., calorimeter 2=13481
    energy output, calibration 2=22020
    ether drift expt. 2=11253
    excitation, by exploding wires as light sources 3=9588
    excited states, lifetime, from intensity/time meas. 3=6648
    exfocal pumping in elliptical mirrors 4=11831
    Fabry—Perot interferometer, active material, modes 4=27679
    Fabry-Perot interferometer with atoms between mirrors 2=6103
    Fabry—Perot interferometer-resonator 3=9590
    as far i.r. source 2=693
    far-i.r. stimulated emission detection by NH_3 maser oscillator 4=19253
    field emission mixer, proposed 2=3159
    field, stationarity condition effects 4=21667
    use in first-order relativity test 3=5343
    fluctuations, low, He—Ne 4=24902
    fluorescent materials with F-centres 2=692
    fluoride single crystals for, growth 3=23397
    focused on W point, rel. to electron emission 4=8811
    four-level, effect of var. materials, formulae 3=24517
    four-level generator, operation, transition to 3-level 4=3230
    frequency-mixing observation in p—n junction 3=9981
    frequency shift, resonant, by Ladenburg classical dispersion theory 3=17086
    frequency shifts of modes due to nonlinear response 4=3212
    frequency stabilization and precise wavelength meas. 3=22022
    Fresnel drag meas. using ring laser 4=27280
    gain saturation and output power 3=22018
    gas, cavity mirror curvatures 4=30083
    gas, for communications 4=14925
    gas, coupling between modes π and σ in mag. field 4=14933
    gas, He-Ne or CO_2, pulsed, high power 3=9987
    gas, He—Ne, for harmonic generation, continuous 3=21506
    gas, He—Ne, harmonic generation, continuous 3=21507
    gas (He—Ne) maser interferometer, diffraction studies 3=9614
    gas, inert, i.r., 2.5-13μ, new freq. possibilities 3=17075
    gas ionization obs. 3=19170
    gas laser action, collision processes 4=24895
    gas laser, interference 4=11351
    gas laser transitions, electron beam excitation 4=11829
    gas, mag. field effects on output, var. r.f. excitation 3=24510
    gas, magnetic tuning, level g value meas. 4=16691
    gas, mode combinations 4=19284
    gas-phase chemical reactions, coherent light generation 4=19282
    gas, population inversion improvement, two methods 4=14932
    gas, power dip at centre of line, theory, low fields 3=24514
    gas, power output and gain, calc. 3=17087
    gas, power output, var. with length and rate of discharge, theory 4=5845
    gas, review 3=9965
    gas, short, combination tone analysis 4=24894
    gas, single freq. operation 4=16692
    gas, small, continuous, higher pressure, He—Ne 3=5888
    gas, thermal tuning by heating rods to alter reflector alignment 4=5846
    gas, tuning, by heating, mode patterns 3=9977

Masers—contd
  optical—contd
    gas, window seal 3=22026
    gaseous, construction, with brewster angle windows 2=19699
    gaseous, detailed review 3=7730
    gaseous, double-resonance phenomena 4=27683
    gaseous, with external concave mirrors 2=7346
    gaseous, with external concave mirrors 3=7318
    gaseous, review 4=24878
    gases, optical frequency discharge initiation 4=8655
    generation and oscill. systems, review 3=17080
    generation of ultramicrowaves by optical mixing 2=22018
    giant pulse calc. 4=16688
    giant pulse evolution 3=17082
    giant pulse laser, dynamics 4=30079
    giant pulse laser, time dependent behaviour 4=14929
    giant pulse operation by bleachable absorber 4=27710
    glass, La—Ba—Th—borate, Nd doped, $4F_{3/2} \rightarrow 4I_{13/2}$ 4=14948
    Glass, Nd^{3+}, 9180A, 80°K 3=12339
    harmonic frequency ratio to fundamental 2=22017
    harmonic generation, in KH_2PO_4, mode effects 3=23995
    harmonic generation and mixing of $CaWO_4$:Nd^{3+} and ruby beams in piezoelec. crystals 3=7359
    harmonic generation in nonlinear crystal, coherent interaction length 4=5353
    harmonic generation, power var. 4=14941
    harmonic generation, saturation effects 3=12340
    heterodyning, spurious harmonic generation 3=21508
    high energy, using multi-elliptical cavity 2=19704
    high freq. threshold condition 2=5467
    higher order cavity modes 3=22009
    i. r. image converter, with liquid crystal viewer 4=29750
    i.r. and opt., high frequency, general theory 2=3164
    i.r., as radiation detector and source 2=9449
    image improvement by placing object inside 4=21283
    inert gas lines, 2-35 μ, term assignments 4=11820
    inert gases, stimulated emission of new i.r. transitions 4=16696
    information rate 3=19477
    interaction, nonlinear, of modes with atoms 3=12361
    interference due to multiple reflection 4=21670
    interference obs., He—Ne, c. w., in near field 4=27686
    interference rings in far-field pattern, interpretation 3=24513
    interference, two independent masers 3=16795
    interferometer, for plasma density meas. 3=19276
    interferometer, for plasma refractive index changes 4=2985
    interferometer, with spherical mirror 4=27327
    interferometers, diffraction losses 3=24045
    interferometers, diffraction losses, calc. 3=16794
    for interferometry, long distance, He—Ne 4=21309
    internal modulation 3=9979
    internal modulation 4=19270
    interstellar communication 2=4863
    ion emission prod. from C, Al, Ti, Ag, Au 4=8843

He^3, single freq. operation 4=16692
He–Cl_2, action rel. to pumping power 4=8977
He–He, Hg lines at 1.53, 1.81 μ, 4 Mc/s excitation 4=14938
He–Hg r.f. discharge, laser action 4=3210
He–Kr, five laser lines, 0.43-0.52 μ 4=30084
He–Ne, alignment characteristics 2=19701
He–Ne, amplification increase by optical feedback 4=19292
He–Ne, bandwidth meas. by Doppler effect from moving mirror 4=24903
He–Ne, Brewster angle window sealing to quartz discharge tube 3=19498
He–Ne confocal laser, radiation patterns 4=5847-8-9
He–Ne, continuous, near i.r. props. 3=7317
He–Ne, continuous, using interferometer 3=17078
He–Ne, continuous-wave, frequency characteristics 2=5155
He–Ne discharge, 20 mW at 6328 A, rel. to crystal optical harmonic generation 4=8366
He–Ne, enhancement during afterglow 3=14801
He–Ne, Fabry–Perot ring splitting 3=22024
He–Ne, fluctuations, low 4=24902
He–Ne, freq. pushing and freq. pulling 4=24901
He–Ne, freq. translation by quartz phonon scatt. inside laser cavity 4=24899
He–Ne, frequency stability 3=19496
He–Ne, gain rel. to pressure and discharge diameter 4=8979
He–Ne, gain saturation, 3.39 μ 4=19293
He–Ne gas maser, optical output 3=525
He–Ne gas maser, Zeeman effect 2=16025
He–Ne gas masers with external mirrors 3=9985
He–Ne gas, with reflecting mirrors, low-freq. oscills. 4=8981
He–Ne, gaseous, cascade 4=11824
He–Ne glow discharge, laser action in negative glow 4=16695
He–Ne, high pressure, pulsed 4=766
He–Ne, hole burning effects 2=11784
He–Ne, increased population inversion using He^3 4=16699
He/Ne, intensity, var. with pressure and relative conc. 3=14805
He–Ne, interference fringes with long path difference 3=9608
He–Ne laser amplifier, noise meas. 4=16698
He–Ne, laser beam, detection and optical freq. mixing by photoconductive cell 4=10131
He–Ne laser, gas discharge aspects 4=18718
He–Ne laser, effect of mode degeneracy on output 4=11821
He–Ne laser, spectral analysis of radiation 4=12383
He–Ne, lifetime 4=24898

Masers —contd
- optical —contd
  - He—Ne, light polarization, in mag. field 4=14937
  - He-Ne, magnetostrictively tuned, operation 2=17603
  - He—Ne mixture, laser transition coupling 4=14935
  - He—Ne mixtures 4=16696
  - He—Ne, multimode output signal meas. 4=16230
  - He—Ne, new i.r. lines 4=19289
  - He—Ne, new transitions, on dominance removal 3=17090
  - He—Ne, non-degenerate, with three plane mirrors 3=24530
  - He—Ne, 0.63μ, low-power microwave modulation 4=3211
  - He—Ne, 0.63-3.39 μm oscillations, behaviour and reciprocal action 4=16700
  - He—Ne, oscillation patterns, 3.39μ, evaporagraphic obs. 4=27687
  - He—Ne oscillators, noise meas. in 6328 A output 4=11822
  - He—Ne, with perpendicular end windows 4=27688
  - He—Ne, planar, Zeeman effects 3=2145
  - He—Ne, polarization and frequency stability, fluctuations 4=8980
  - He—Ne, polarization in weak long. mag. fields 4=21678
  - He—Ne, population inversion, excitation mechanism and current dependence 4=8978
  - He—Ne, population pulsations and level lifetimes 4=24897
  - He—Ne, power output, varying plasma length and discharge current 3=17087
  - He—Ne power var. with Brewster angle, tube length, reflectivity 4=19290
  - He-Ne, pulsed voltage operation 2=20140
  - He—Ne, red, continuous, as Raman source 4=8437
  - He—Ne, reflectivity, optimum, 0.63 μ 4=19291
  - He—Ne, resonator, interferometer, isolation of 15 modes 3=9974
  - He—Ne, saturation at 3.39 μ 3=19497
  - He—Ne, signal polarization 3=22017
  - He—Ne, 6328 A, output power var. with mirror transmission 4=21676
  - He—Ne, as source for scattering meas. 4=5396
  - He—Ne, spectral line shape 3=11908
  - He—Ne, stabilization of freq. by synchronous intractivity 56 Mc/s modulation 4=24900
  - He—Ne, stimulated transitions 4=28130
  - He—Ne system, population study by resonant cavity spectroscopy 4=19288
  - He—Ne system, 6328 A oscillation modes, interferometric study 4=14934
  - He—Ne, 3.39 μ 3=19495
  - He—Ne, three 3p—2s transitions, oscillation 4=16697
  - He—Ne transitions 3=6358
  - He—Ne, Zeeman and coherence effects meas. 4=8982
  - He—Ne, Zeeman effect, at 3.39 μ 4=14936
  - He—Ne, Zeeman polarization rot. 4=5850
  - He—Ne^{22}, tuning dip in middle of Doppler broadened line 3=17092
  - He—Ne and Ne, 1.15 μ $2p_4 \leftarrow 2s_2$ transition, isotope shift and saturation behaviour 3=19944
  - He-Xe, 2.026 μ, Zeeman tuning 3=17076
  - Hg 4=21679
  - Hg discharge, 1.529, 1.813μ 4=765
  - Hg, line transition assignation by time resolution 4=16701
  - Hg$^+$ in Hg—He at 0.5 torr 4=11827
  - Hg—inert gas, line transition assignation by time resolution 4=16701
  - Hg—Ar, He 4=21679
  - Hg—He discharge, 19 lines meas. 4=24905
  - I discharge, 3.236, 3.431μ 4=765
  - I, line classification review 4=19287
  - InAs diode, mag. tunable, i.r. 3=19494
  - InAs diodes, radiation width at ~ 31 000 A 3=20452
  - InAs, optical study with view to laser prod. 4=28688
  - InP diodes, 77° to 4.2°K 3=19493
  - InP, as GaAs, temp. var. of threshold current 4=14947
  - InP, harmonic generation, power var. 4=14941
  - InP injection lasers, prep. and props. 4=24921
  - InSb, alloyed junction, at 2°K 4=8991
  - InSb c.w. diode, magnetic tuning 4=14946
  - InSb diodes, band gap mechanism, from var. mag. field at 1.9°K 4=24922
  - InSb, 5.28 μm, 35°K 4=5864
  - InSb laser diode, i.r., line frequency and threshold current in high mag. fields 4=8990
  - InSb, optical study with view to laser prod. 4=28688
  - Kr, i.r. lines, accurate meas. 4=21680

Masers —contd
- optical —contd
  - Kr$^+$ 4=21677
  - La series ions in solids, 35 systems, optical consts. 4=27696
  - Li—Mg—Al—SiO_3 glass, rare-earth activated, stimulated emission 3=7736
  - Li—Mg—SO_3, Gd^{3+}-activated glass, u.v. stimulated radiation 3=3042
  - $MgF_2:Ni^{2+}$ phonon mechanism 4=5878
  - N atoms, from molecular dissociation 4=11828
  - N_2, pulsed discharge, band spectrum stimulation 3=19499
  - N_2, u.v. 4=19294
  - Nd, continuous-wave, room temp. 3=22014
  - Nd-doped, YAl, YGa and YGd garnets 4=19309
  - Nd, filters, liquid 4=19311
  - Nd glass fibre, sun pumped 4=27701
  - Nd glass, higher oscillation modes 4=30092
  - Nd in glass, pulsations 4=5852
  - Nd in glass rod, far-field Fabry—Perot diffr. ring 3=24512
  - Nd glass rod, thermo-optical effects 4=19299
  - Nd—glass, pumping, non-destructive, by high explosives 4=8970
  - Nd glass, spectrum, time resolved, pump var. 4=21686
  - Nd glasses, amplification factor at 1.06 μ 4=16706
  - Nd^{+3} in barium crown glass 2=6562
  - Nd^{3+}-doped borate glass, oscills. 4=24924
  - use of Nd^{3+} doped glass 4=13037
  - Nd^{3+} glass, high repetition rate system 4=14949
  - Nd^{3+} in glass rod, stimulated emission 4=8992
  - Nd^{3+} glass rods, 1.06 μ 3=22008
  - Nd^{3+} in oxide glasses, stimulated emission 4=20484
  - Nd in SrF_2 3=20482
  - Nd and Yb ions in silicate glass, simultaneous action 3=7737
  - Nd^{3+}—Yb^{3+} resonance cooperation 4=27702
  - Ne and He—Ne, laser action up to 57.355 μ 4=11823
  - Ne atom scatt., double interaction with both laser modes 4=25541
  - Ne discharge, c.w. action up to 133 μ 4=30086
  - Ne gas maser, optical output 3=525
  - Ne, i.r. lines, accurate meas. 4=21680
  - Ne, new i.r. lines 4=19289
  - Ne, new longest lines 4=27689
  - Ne, stimulated transitions 4=28131
  - Ne, transition probabilities 4=11825
  - Ne—He laser, output power, depend. on various parameters 4=11826
  - Ne—He mixture 4=8983
  - Ne—He mixture, optimum operating conditions 4=3208
  - Ne—He mixtures, laser effect transitions 3=22475
  - Ne—He, new Ne transitions 4=21681
  - Ne—He or Ne, pulsed radiation generation 4=5851
  - O atoms, from molecular dissociation 4=11828
  - O atoms, in Ne—O_2 and A—O_2 r.f. discharges 2=22908
  - Rb^{87}, hyperfine Zeeman transitions, optically pumped 4=24906
  - Rb^{87} optical pumping, efficiency of Rb^{85} filter 4=22313
  - S atoms, from molecular dissociation 4=11828
  - Si, population inversion states with impurities 4=12672
  - SiC diode "laser" 4=14956
  - SiC p—n junction 4=9000
  - SmR_3 (R is organic radical), by internal energy transfer, possibilities 3=17072

Measurement—contd
errors—contd
in low-resistance circuits, rectifier-type milliameter 0=14940
mean error det. by observation refinement 0=3400
mean square, in linear systems, lower bound 3=1580
mechanical comparators, effect of temp. variation 0=4980
noise, effect of finite instrument range 4=18634
in PAPA, analysis 2=21790
particle counting, statistical tests for errors 1=11046
in particle polarization meas. 1=472-3
periodic, in meridian instruments 2=21683
polynomial representation of experimental data 1=5294
ratemeter, speed of response rel. to random fluctuations amplitude 4=773
in repeated measurements, limit of usefulness 0=865
significant figures, teaching demonstration 4=14005
small diameters, with double-image micrometer, systematic errors 0=4845
smoothing of observed data 0=10549
spectra, smearing aberrations, correction method 2=7696
spectrometers, scanning distortions 0=10776
in spectrophotometry, optimal parameters 1=4457
spectrum, systematic distortions due to whole instrument 0=10770
star positrons, by colour effect on astrometric plates 0=12301
temperature, probe meas. in thermal regions 0=5218
in terms of maximum error, without considering probability 3=7082
with thermistor instruments, effect of temp. gradient 3=19132
thermistor thermometer data, non-linearity corrections 1=16168
X-ray absorption coeff., statistical errors 1=5711
X-ray powder diffractometry 4=10505

Mechanical measurement
Individual quantities and instruments are listed separately e.g., Length measurement
cathetometer with horizontally stabilized telescope 4=2
dynamic, of structures, by Hopkinson press.bar 4=29502
flabby material, tester for low audio and subaudio frequ. 3=3783
flatness testing, using air gauging 3=7164
gears, spur, transmission error meas. 3=7171
hardness, indentation, with electron microscope 3=20759
level indicator for liquid He storage 1=10636
level meas. for liquid metals 1=10473
liquid level gauge, attraction between liquid and gauge needle 1=5416
low temp. tests, review 4=13357
micro-tensile testing for extensions of few A —15 mm of specimens $>10^{-7}$ mm^2 cross-section 1=10200
moment-of-inertia apparatus, slow-motion 3=21282
non-destructive, instruments, conference 3=9391
pantograph for use with X–Y plotter 2=9233
photoelectric curve follower 2=9234
planeness of long beds, interferometric testing 1=4296
plate parameters, eddy current method 3=9902
properties of materials at high temp., furnace 3=7378
shaft position indicator 1=4297
simulation of random stress fatigue effects by minimum number of discrete stress levels 3=5403
slosh and liquid level, meas. in rocket tanks 0=14606
small displacements and forces, electromechanical transducer 2=19496
spheres and particles, packing fractions 2=19388
surface topography, interference microscope meas. 3=14324
tensile testing machine for whiskers 1=10201
use of pulse-counting techniques 0=7051
vibration, modulated photoelec. meas. 2=9331
viscoelastic solids, dynamics props. 3=13371
wavelength calibr. in 30-1000μ 3=24019
X-Y translation stage and indexing mechanism 2=9232

Mechanical properties of substances
See also individual properties, e.g. Abrasion; Elastic deformation; Mechanical strength; Plastic deformation; Slip; Wear, etc. (Heading introduced in 1964).
alkali halides, rel. to neutron and hard irrad. dose range 4=10352

ceramics, and microstructure, review 4=23084
dilatation consts. and complex ratio from forced vibr. of free viscoelastic sphere 4=15686
ductility, hexagonal crystals, rel. to slip 4=15694
fibres, energy storage, flexural and tensile 4=15681
filaments, stress—rupture testing 4=17719
granite, attenuation of high amplitude waves 4=15717
marble, attenuation of high amplitude waves 4=15717
measurement, low temps., review 4=13357
metals and alloys, rel. to vacancy clusters, review 4=12733
metals, neutron effect calc., due to dislocation spikes and vacancy clusters 4=13358
polycrystalline solids, residual stress and strain meas., by X-ray diffraction 4=13623
polymers, dielectric, > 300°C 4=20410
polymers, rigidity and heat stability rel. to super-molec. structure control 4=29152
polymers, rel. to structure, teaching review 4=13698
polypropylene crystalline films, effect of microstructure 4=7447
polystyrene, dynamic mechanical props. 4=27158
resins, synthetic, non-coincidence of optical and mechanical singularities 4=26461
resistance to thermal shock, criteria 4=13385
rigidity, flexural, and elastic and loss modulii, meas. apparatus 4=13364
rubber, natural vulcanizates, cross-linked 4=10400
silicate glass, static stress fatigue and strength 4=13446
sintered aluminium products, no grain size effect 4=30767
steel, rel. to mag. props. 4=28779
steels, stainless, neutron effects, high temps. 4=10386
Udimet 700 Ni base alloy, and solute distrib. near grain boundaries 4=13464
whiskers 4=17791
Al, attenuation of high-amplitude waves 4=15717
Al single crystals at 80°K, effect of electron irrad. 4=15701
Au films, vac. deposited, 2000-50 000 A 4=23575
Be, and effect of heat treatment on impurities, 600°C 4=7667
C films, rel. to graphitization 4=23263
Cu, effect of H_2 4=13430
Cu, explosive loaded wave profiles, meas. 4=28939
Cu, rel. to structural characteristics 4=23138
Cu, rel. to substructure of annealed specimens 4=23525
Cu—Zn, γ-phase 4=13481
Fe, high-purity, N interstitial effect on recovery 4=22565
Fe, improvement by adding dispersion particles 4=17733
Fe–Ni–Ti, γ-phase, reverse martensitic transform 4=23167
Fe–Ni–V, γ-phase, reverse martensitic transform. 4=23167
KCl, rel. to neutron and hard irrad. dose range 4=10352
LiF, rel. to neutron and hard irrad. dose range 4=10352
Nb, plastic and elastic deformation rel. to substructure after filing 4=23194
Ni, effect of H_2 4=13430
Ni, effect of mag. field 4=4476
Ni—Fe alloy, plastically deformed and heat treated 4=26524
Pu—Al alloys, determ. for phase boundary position calc. 4=13440
Pu—Ce alloys, determ. for phase boundary position calc. 4=13440
Re, high temps., and vacuum technique 4=18297
Re–W, Re–Mo, high temps., and vacuum technique 4=18297
U carbides 4=13611
U, irradiation growth, twinning mechanism incorrectness 4=7464
W, arc plasma-sprayed, sintering effects 4=15719

- Fe single crystals, $< 5 \times 10^{-3}$ p.p.m. C, temp. depend. 4=1944
- Fe–Al solid soln. 3=6798
- Fe_3Al, strengthening on ordering 2=21450
- Fe–Cr–Ni alloys 1=20375
- Fe–Ni–Mo alloys, rel. to Mo content 4=17737
- Ge, structure and plastic flow 4=28950
- Hf 0=15635
- KCl, critical shear stress, F-centre dependence 0=3156
- KCl whiskers 1=20371
- KCl–KBr rel. to KBr conc. 4=4484
- LiF cleavage whiskers 2=19006
- LiF, critical yield stress, edge dislocation for slip 2=3897
- LiF, rel. to dislocations around indentation 3=12970
- LiF, hardening by electron irradiation 0=18268
- LiF, shear strength, due to charged dislocations 0=20817
- Li–Pb shielding alloy, study 0=8273
- Mg/MgO, high temp. 3=15268-9
- MgO, neutron-irrad., fracture stress 4=10392
- Mg–Zr alloy, creep strength rel. to heat treatment 4=28965
- Mo, effect grain size on tensile props. 0=16236
- Mo, 0°–2300°C 1=20378
- Mo, tensile props. after neutron irradiation 1=20377
- Mo, yield 0=21106
- NaCl crystals 0=10262
- NaCl, whiskers 0=1586
- NaCl whiskers 1=20371
- NaCl, whiskers, rel. to growth conditions 2=2368
- NaCl whiskers, yield strength 1=14901
- Nb, irradiated, mech. props. 0=16232
- Nb, 0°–2300°C 1=20378

Mechanical strength—contd
- Nb, temp. depend. 4=23191
- Ni-base cast alloy, complex 3=11281
- Ni, compressive, effect of deformation ageing 1=10216
- Ni, effect of high temp. thermomechanical treatment 2=23777
- Ni, effect of high temp. thermomechanical treatment 3=3234
- Ni, effect of prior strain and polygonization 4=7441
- Ni, effect of thermomechanical treatment 3=8778
- Ni, neutron-bombardment effect 4=23165
- Ni tubes, under various loads 1=6467
- Ni tubes, under various loads 1=10221
- PbS, effect of point-defects due to nonstoichiometry 3=25266
- Si whiskers 1=20371
- Sn, effect of Ga film 1=14910
- Sn whiskers 1=20371
- Ta, 0°–2300°C 1=20378
- Ta carbide, transverse-rupture strength, rel. to C content 4=13448
- Te whiskers 1=20371
- Th, sintered, effect of impurities 0=10462
- Ti alloys, and phase transform., β to martensitic α 4=17771
- TiC–WC–Co cermet alloys 1=6468
- U, rel. to crystal structure change 4=28960
- U, irradiated, tensile 0=10271
- U, var. with grain size 4=4492
- W, cast, effect of recryst. anneal 3=11183
- W, 0°–2300°C 1=20378
- Zn, effect of Ga film 1=14910
- Zn, heat cycled, mech. and phys. effects 0=4569
- Zn, rel. to surface-active Ga coating 4=10353
- Zn rel. to surface-active melt and irrad. 4=10404
- Zn, torsion, and tensile strength—endurance relation 3=18208
- Zn whiskers 1=20371
- ZnS whiskers 1=20371
- Zr, increase by dispersing La_2O_3, Y_2O_3, 1200°F 4=13456
- Zr, rel. to crystal structure change 4=28960
- **compressive** (subheading introduced in 1962)
  - coal, rectangular blocks 2=19008
  - crushing strength, reactor fuel particles, instrument for determ. 4=22268
  - glass, submicroscopic flaws effect, failure process, calc. 4=28952
  - metals, up to 9×10^5 atm. 2=6728
  - metals, up to 9×10^6 atm 3=6786
  - Ag single crystals, compression tests, easy glide rel. to height-to-width ratio 4=30764
  - Ag–10% Au alloy, compression tests, easy glide 4=30764
  - Al single crystals, compression tests, easy glide rel. to height-to-width ratio 4=30764
  - Al single crystals, deformed, size effects 4=30762
  - Au single crystals, compression tests, easy glide rel. to height-to-width ratio, 4=30764
  - Be, single crystals, 4.2-900°K 4=1929
  - NaCl, effect of Ca^{2+} additions, meas. 4=23207
  - TiC–WC–Co alloys, effect of composition and structure 4=15720
  - U carbides 4=13611
  - WC, Co-bonded, ultimate compressive strength and fracture mechanism 4=23221
  - WC–Co alloys, effect of composition and structure 4=15720
- **shear** (subheading introduced in 1962)
  - brass, α-, microscopic strain distrib. at surface 3=6799
  - ceramics, rel. to irradiation and annealing 4=10374
  - diamond 4=23152
  - elastic laminae rel. to hydrodynamics analogy 2=9214
  - rel. to fracture 4=27151
  - glasses, commercial 3=11175
  - ice–stainless steel and ice–quartz systems 2=23798
  - metals, effect of surface conditions 2=8742
  - metals, radiation hardened 2=20993
  - metals, under pressure, rel. to temperature 3=13375
  - polymers, liquid 3=21351
  - press, for rock and mineral specimen tests 4=23986
  - propellant, solid, determ. of modulus 4=7370
  - rubber mixtures, rel. to viscosity and compression rate 2=12852, 17418
  - Al crystals, effect of substructure 3=23350
  - Al crystals, temp. and strain-rate effects on 4=1924

Mechanical strength—contd
- **shear**—contd
  - Al, modulus, rel. to stationary extended dislocations 3=25616
  - Al—Ag alloy, var. with Guinier—Preston zone radius and temp. 4=30768
  - Al-4% Cu alloy 2=8729
  - Al—Zn alloy, var. with Guinier—Preston zone radius and temp. 4=30768
  - Au, single crystals, critical shear stress 3=1238
  - Cu, modulus, rel. to stationary extended dislocations 3=25616
  - Cu, single crystals, critical shear stress 3=1238
  - Cu, torsional, long-term 2=12862, 14900
  - Cu whiskers, effect of impurities 3=20726
  - Cu—Fe mixed whiskers 3=20796
  - Ho, rel. to temperature 3=11091
  - In, 18° to 100°C, up to 7×10^3 kg cm^{-2} pressure 3=13375
  - Mg_2SiO_4 (forsterite) whiskers 2=6748
  - SiC single crystal platelets, crossbending strength 3=20708
  - Tb, rel. to temperature 3=11091
  - Zn, -50° to 200°C, up to 10^5 kg cm^{-2} pressure 3=13375
  - Zn influence of microsegregations 3=6792
  - Zn, torsional, long-term 2=12862, 14900
- **tensile** (subheading introduced in 1962)
  - brittle materials, indentation test 2=2665, 21857
  - brittle materials, meas. by two pulse fracture 4=20684
  - brittle materials, testing 2=8743
  - capron fibres, rel. to molecular weight 3=16003
  - ceramics, diametral-compression test 4=26500
  - ceramics, measurement method at high temps. 4=23089
  - duralumin, ultimate tensile strength, temp. depend., plastic deformation effects 4=28936
  - elastomers, gum, molecular basis 4=7452
  - films, increase by sandwich struct. 4=23571
  - glass, meas. and improvement 2=14902
  - granular structures 4=23106
  - graphite, H4LM, -253°-500°C 4=20659
  - graphite, H4LM, UTS rel. to temp. and strain rate in vac. and He 4=20658
  - Invar-type alloys meas., dispersion-hardened 4=13419
  - ionic crystals, rel. to annealing temp., effect of charged dislocations 3=798
  - machine for straining small specimens 4=17715
  - measurement, load oscillations in tests 2=14901
  - measurement in spun glass, floating device 2=19498
  - metals of equiaxial structure, rel. to fracture 4=23107
  - metal foils from rolled material, testing procedure 3=5073
  - metals, low-temp., apparatus 3=9667
  - metals, and mosaic block misorientation, linear rel. 3=20728
  - metals, statistical theory 2=23783
  - metals, effect of surface conditions 2=8742
  - metal whiskers, binary, 20-300 μ dia. 4=13378
  - nylon threads, simultaneous axial and transverse stresses 3=18206
  - polymer films, rel. to drawing and temperature 4=7734
  - polymers, theory 2=16964, 19003
  - polymethyl methacrylate, rel. to birefringence 3=18207
  - polymethylmethacrylate, rupture factor 3=3235
  - polypropylene fibres, tensile strength, rel. to double refraction 3=23045
  - rubber vulcanizates, unfilled, failure envelopes 4=7453
  - sapphire whiskers, 25°-2030°C 2=2332
  - silica fibres 4=13444
  - static and alternating loading, various solids 2=19007
  - steel, polycrystalline 4=7458
  - steels, low-carbon, γ-ray effects 2=19005, 23775
  - steel tubes, for reactor fuel cans, bursting strength 2=23779
  - testing machine for thin specimens 2=19509
  - transition metals, rel. to neutron irrad. 3=8784
  - two-phase materials, such as glass-fibre resins, review 3=1209
  - uniform biaxial tensile stress field, prod. of 4=1911
  - whiskers, meas. technique 3=25640
  - whiskers, submicron, testing technique 2=18976
  - Zircaloy-2, rel. to irradiation 3=11170
  - Ag films, thickness var. 4=23571
  - Ag, films, 35-50μ, 100-300°C 3=6783
  - Ag, rel. to O content 3=13363

Mechanical strength—contd
- **tensile**—contd
  - Ag, time var., low temp., anomalous, and plastic deformation 3=20729
  - AgCd, order—disorder transformations 3=3328
  - Al alloys, brittleness meas. at low temp. 2=19010
  - Al, rel. to block misorientation angle 3=11193
  - Al, relation to endurance, and torsion 3=18208
  - Al, nonhydrodynamic attenuation 3=21490
  - Al, time var., low temp., anomalous, and plastic deformation 3=20729
  - Al, ultimate tensile strength, yield pt., extrusion by high-pressure liquid 4=28930
  - Al, yield prints at high temp. 4=23121
  - Al—Mg alloy, statically or dynamically deformed, UTS 4=15721
  - Al—Mg—Si sheet, effect of heat treatment 3=6869
  - Al_2O_3—Al alloys, improvement by blending 4=17724
  - Au, pure, void formation 3=13364
  - Be bronze, ultimate tensile strength, temp. depend., plastic deformation effects 4=28936
  - Be, highly irradiated 2=4338
  - Be sheet, variation of props. 2=12845
  - Bi whiskers 2=6788
  - Cd, low temp. thermal cycling 3=3233
  - Cd, polycryst., -196°-200°C 3=6800
  - Cd—Ag alloy, -196° -200°C 3=6800
  - Cd—Mg alloy, -196° -200°C 3=6800
  - Co whiskers 2=23778
  - Co whiskers 3=6801
  - Co—Ni—Nb alloys 3=20724
  - Cu-alloy composites, W-fibre-reinforced, effects of alloying 4=30777
  - Cu, crystal whiskers, increase on alloying with Ag 3=20727
  - Cu, effect of introduction of H_2 at high press. 4=13430
  - Cu, films, rel. to thickness 4=7416
  - Cu films, thickness var. 4=23571
  - Cu, films, 35-50μ, 100-300°C 3=6783
  - Cu foils 3=23353
  - Cu, foil from rolled material, behaviour, 2-53μ thick 4=15704
  - Cu foils, from rolled Cu 3=5073
  - Cu powders, C-reduced 3=13552
  - Cu, relation to endurance, and torsion 3=18208
  - Cu, ultimate dynamic yield strength 2=6746
  - Cu, ultimate, rel. to high temp. and pressure 4=7418
  - Cu, ultimate tensile strength, yield pt., extrusion by high-pressure liquid 4=28930
  - Cu, vacuum-deposited films, ultimate strength 2=6745
  - Cu whiskers 2=23778
  - Cu whiskers 3=6801
  - Cu whiskers, quench softening 2=4339
  - Cu, yield stress, rel. to dislocation density 2=6747
  - Cu—Al alloys, time-to-rupture tests 4=28933
  - Cu—Cr (0.3%) alloy, high 3=20274
  - Cu—Cr, sintered alloys 2=15052
  - Cu—Fe whiskers 4=7419
  - Cu—Zr (0.12%) alloy, high 3=20274
  - Fe-base alloys, UTS rel. to Ni and Co content 4=17736
  - Fe, tensile, effects of C, N, Mu up to 500°C 4=26515
  - Fe, cast, with spheroidal graphite, u.s. testing 2=23899
  - Fe, hydro-extruded 3=1215
  - Fe, rel. to neutron irrad. damage 3=8759
  - Fe, sintered under various conditions 4=10388
  - Fe, tensile: yield strength, rel. to temp. and annealing 3=13349
  - Fe, yield stress for two strain rates 3=15991
  - Fe-Al alloys, yielding rel. to ordering transformations 4=28959
  - Fe—C alloys, lifetime under load, at high temps. 2=23761
  - Fe—C alloys, lifetime under load, at high temps. 3=6791
  - Fe—Cu alloys, lifetime under load, at high temp. 2=23761
  - Fe—Cu, alloys, lifetime under load, at high temps. 3=6791
  - Fe—Ni—Ti alloy, ultimate tensile strength, temp. depend., plastic deformation effects 4=28936
  - LiF whiskers, effect of imperfections 3=25641
  - LiF whiskers, meas. 3=25640
  - Mg, low temp. thermal cycling 3=3233
  - Mg, yield strength, correl. with u. s. attenuation 4=3986

- **Mechanical strength** —contd
  - tensile —contd
    - MgO, increase by dislocation introduction and SiC particle spinkling 3=25639
    - MgO, rel. to mobile dislocation sources 4=13425
    - Mn—Fe(81%), tensile, heat treatment effect and permeability to H 4=20670
    - Mo, ductibility and embrittlement, 4.2-700°K 2=23754
    - Mo, n-irradiated, increase on annealing ≤ 500° C 3=20730
    - Mo polycrystals under ultra-high vacuum 4=20672

  atoms, excitation, by Kr, in discharge, by collisions 3=19190
  atoms, excitation, by pulsed electrons, $^3F_4$ level amp. and depolarization calc. 4=28143
  atoms excited, influence of N 2=6090, 14220
  atoms, excited, 6^3P_1, colliding with rare gases, N_2O_2, N_2, reson. double meas. 4=15304
  atoms, fluorescence modulation by light and r.f. waves 1=17275
  atoms, g_T value of 6^3P_1 level 1=12244
  atom, green line, Zeeman splitting 4=16230
  atoms, h.f.s. of 6^3P_2 state of $Hg^{199,201}$ 0=13413
  atom, h.f.s. and isotope shifts of spectra 3=17529
  atoms of $Hg^{197,199}$, h.f.s. of $^3P_1$ state 4=1212
  atoms, $Hg^{200-202}$ isotopic shift 4=12346
  atoms, interatomic potential energy functions, from viscosity 4=25592
  atoms, λ2537A line broadening 2=5071
  atoms, 2537 A line structure, meas. by multilayer interf. 4=24376
  atom, 4258 A line polarization, rel. to 7^3S_1 level, magneto-optical resonance study 4=3794
  atoms, λ5461A line, isotope structure 2=20736
  atoms, metastable, collision disorient, relax. time 3=15301
  atoms, metastable, produced by charge exchange 4=25596
  atoms, photon elastic scatt., polarization, calc. 0=17692
  atoms, reson. fluoresc. quenching by collision with N_2 4=22304

Mercury—contd
  atoms, resonance fluorescence and Zeeman effect 1=12246
  atom, resonance radiation in discharge, quenching 3=19938
  atoms, scattering and polarization of 1-2 keV electrons 3=12780
  atoms, sensitized fluorescence of Hg–Tl mixtures, effect of added A and He 0=15660
  atom, spectral line blackening in hollow cathode 3=19936
  atomic spectrum, broadening shape and shift due to Ar at higher pressure 4=28127
  atomic spectrum, h. f. s. rel. to isotope shift 2=3702
  atomic spectrum, h.f.s. and isotope shifts in 2537 A line 1=9907
  atomic spectrum, λ 2537 broadening by Xe, high-temp. anomaly 1=13936
  atomic spectrum, λ 2537 displacement by H_2 and D_2, difference 1=13934
  atomic spectrum line 2537 A, displacement and width 4=1211
  atomic spectrum, population enhancement by Kr 1=12250
  atoms, stopping of relativistic electrons by K-shell 1=816
  atoms, structure, relativistic self-consistent solution 0=9741
  atoms, velocity distrib. at 296°K 0=6794
  atoms, $5d^96s^26p$ levels 4=28128
  atom $(6s6p)^3P_1$ level, gJ meas. 4=19954
  atoms, $6^3P_0-6^1S_0$ line, effect of nuclear spin 2=14201
  $^3P_1-^1S_0$ transition, optical dispersion exam. 4=11365
  6^3P_1 level optical resonance light, coherent multiple diffusion 1=9906
  atoms, 6^3P_1 state, quenching by N_2O, isotope effect 0=15650
  atoms, $6(^3P_1)$, electrophilic character, in photosensitized reactions 3=25053
  atom, 7^3S_1 state, mean lifetime meas. 3=15287
  atomic $7^3S_1-6^3P_{0,1,2}$ negative temps. by H quenching, search 2=20743
  in barometers and manometers, props. 0=12429
  boiling heat transfer with water, methanol or ethanol 2=5203
  Bruggemans' formula, exper. verification 0=19147

  diffusion in solid and liquid Te 2=18610
  diffusion in Zn, temp. var., surface and volume 4=1521
  discharge, d.c., in Ne—Hg vapour mixture 3=9734
  discharge, electric, hot cathode, plasma, electron density, long var. 3=19204
  discharges, electron velocity distrib., 0. 1-20 mm Hg 0=16981
  discharges, h.f., in const. mag. field 0=9019
  discharges, h.f., effect of mag. field 0=16983
  discharge, Hg–He, 19 laser lines meas. 4=24905
  discharges, l.p., Hg + A, pos. column 0=16970
  discharges, l.p., hot-cathode, elec. noise 0=5280
  discharge lamp, spectral line intensity ratios, 1 to 400 torr 3=255
  discharge, low pressure, space-charge double layers 3=19205
  discharge in mercury—rare-gas mixtures 4=5567
  discharges, plasma resonance in r.f. probe 0=19698
  discharge, positive column gradient, middle pressure 3=19210

Mercury—contd
discharges, positive column, scattering of microwaves 0=19684
discharges, probe meas., at 10 mm Hg 0=19690
discharge, rare-gas, resonance radiation, radial and total intensities 3=12764
discharge tube, l.f. plasma oscills. 4=21530
discharge tube, low-pressure, moving striations, theory 1=18798
discharges, Zn + Hg, with negative optical absorption 0=19360
effect on brittle fracture on Zn monocrystals 1=6471
effect on photocond. of CdTe 2=16753, 18733
elec. arc, low-pressure, as u.v. source 3=14329
electric arc, probe meas. in plasma 2=3017
elec. discharge with A, l.p., electron mobility in positive column 1=18794
elec. discharge with A, moving striations, velocity 1=18792
electrical discharge, electron number densities, a.c. and d.c. components 3=21804
elec. discharges in, high rate of energy exchange between electrons, evidence 3=24268
electric discharge, positive column, electron velocity distrib. 4=14599
electric resist. and thermoelec. power 3=23902
electrode in soln., capacity, rel. to model 2=8922
electrokinetic effects, in liquid metal, calc. 0=5268
electrokinetic effects, structural viscosity, in surface layers 4=24230
electron mobility, temp. dependence 1=16272
electro-osmosis, temp. depend. 0=5269
films, elec. cond. rel. to thickness 2=12491, 18636
films, freshly deposited, superconducting props. 1=18719
films, freshly deposited, superconducting props 3=327
films, quench-condensed, elec. props. 2=23242
flow, between rotat. cylinders in mag. field 2=5454
films, superconducting, electron tunelling 4=24507
flow in circular glass tube in mag. fld. 4=11769
flow, Couette, between coaxial cylinders in axial mag. field, stability 0=12686
flow in mag. fld., trial installation, Grenoble 4=11768
flow, turbulent, heat transfer 2=19740
fluctuations, electrical 4=438
fluorescent yield of L-shell 4=3774
free surface, magnetohydrodynamics 1=5548
gas-phase solubility in compressed Ar 2=5009
Hall coefficient, measurement 1=8134
Hall effect, liquid and solid states, temp. depend. 1=4356
Hall effect, meas. 3=7218
heat transfer during flow in circular tube 1=18644
heat transfer during flow in steel tube 1=8250
heat transfer during flow in steel tube 1=10616
heat transport by convection in magnetic fields 1=5364
i.r. emission lines, interferometric wavelength meas. 0=16854
instability, when heated and rotated in magnetic field 0=2169
internal friction of liquid 2=15585
ionization in discharge plasmas 0=7069
ionization potential of multiply charged Hg 1=7023
ions in air, charge exchange cross-sections, meas. 4=27491
ions, causing cathode sputtering of Ni 4=14770
ions, 5 kV, from Kaufman-type source, neutralization by electron injection 4=19117
ions, Hg^+, drift velocities in vapour 4=24576
ions, Hg^+ in Hg gas, kinetics 0=3742
ions, Hg^+ and Hg^{2+}, ionization cross-sections, for electrons 4=16433
ions, Hg^+, sputtering of f.c.c. metals, Ge and Si 2=13608
ions, Hg^+, in sputtering Mo, Fe, Ni and Pt, ang. distrib. 0=1174
ions, Hg^{2+}, electron distrib., calc. from statistical model 0=9742
ions, Hg^{2+}, second-order quadrupole effect 2=18396
ions, sputtering of Cu atoms, energy distrib. 4=24754
isomeric shift in atomic spectrum, Hg^{197} 0=7721
isotope abundance 1=16081
isotope separation in liquid by d.c. current, effect of temp. 0=9749

Mercury—contd
isotopes, n.m.r. in orienting radiation 0=1472
jet, current-induced pinch instabilities 2=5464
jet, sausage instability; plasma pinch model 1=18877
jet, stability 1=5554
K-absorption edge, calc., effect of including Lamb shift 0=1471
K-electron wave-functions 1=2274
K-level electrons, scattering of photons 0=15314

laminar flow in magnetic field 2=3140
lamp, low pressure, annular 2=17634
lamps for i.r. spectroscopy 1=4467
laser 4=21679
laser, Hg—He, 1.53, 1.81 μ, 4 Mc/s excitation 4=14938
lattice dynamics, α-Hg, monatomic rhombohedral crystal 4=9828
liquid, atomic distribution, structure 0=19123
liquid, electric currents, due to electron diffusion 0=19150
liquid, electrokinetic effects 4=200
liquid in evacuating tube, luminescence 3=14171-2
liquid, Hall effect 3=144
liquid, Hall effect 3=16636
liquid, refr. and absorpt. index in visible and near i.r. 4=24213
liquid, self-diffusion, expt. 4=24192
liquid structure, theory 1=18389
liquid structure, X-ray scatt. study 3=7198
liquid structure, by X-ray scattering and atomic distribution 1=15850
liquid, ultrasonic propagation and viscosity 3=9457
low-pressure discharge lamp spectrum 1=18599
magnetic resonance of excited states 0=20557-8
magnetohydrodynamics, co-rotation 2=1575
in MHD generators, ionization, non-equilib., seeded with Cs 4=18663
magnetohydrodyn., hardcore pinch, stability 2=17939
magnetoplasma resonance, l.f., meas. 3=8409
maser, optical, discharge, 1.529, 1.813μ 4=765
mercuric selenide, 0.420-0.715μ irradiated photoconductivity 2=6489
mixed with A, elec. discharge, positive column gradient 3=21749
mixed with rare gases, elec. discharge, positive column gradient 3=21749
molecular beam formation 4=1324
molecular beam prodn. 3=20034
molecule formation with Xe, vibration spectrum 1=13936
molten, elec. resist. and Hall effect 3=9475
molten, scatt. diagrams evaluation 2=17439
molten, structure analysis 1=12863
molten, thermal props. 2=17445
multiple coherent scattering of light from optical resonance in vapour 0=20548
n.m.r., electronic structure 0=4530
n. m. r. of Hg^{199} on walls of molten SiO_2, transverse thermal relax., u. v. irrad. effects 4=24272
n.m.r., Hg^{201}, optical detection 0=17660
n. m. r., 6^3P_1 level, displacement by multiple coherent scattering 4=15282
nucleate-pool-boiling data 2=15816
normal and superconducting, u.s. absorption 0=8954
nucleus, screened, electron scatt. calc. 4=9667
optical constants, measurement 0=10704
optical pumping, density matrix study 1=7441
optical pumping, nuclear orientation of $Hg^{199,201}$ 2=3708
optico-acoustic effect, u.v. excitation, effect of air and A 0=19214
oscillations, forced, sinusoidal, in straight tube with mag. field present, expt. 4=16635
partial condensation in mol. beams, mass spectroscopic meas. 4=30489
PRK-4 lamp, plasma radiation in far i. r. 4=24650
phase transitions, liquid—α and α—β 3=18227
plasma beam production 1=4618
plasma cylindrical column, noise radiation and scattering 3=383
plasma d.c. discharge, search for electrostatic sound wave modes 1=11961
plasma, dark, oscillations, 15 Mc/s 3=4160
plasma, electron mobility, temp. var., transport cross-section effects 3=19236
plasma, l.f. waves on positive column 4=19023

Mercury—contd
plasma oscillations, l.f. 3=4166
plasma, probe characteristics meas. by 1-, 2-, 3-, and 4- electrode probes 4=14688
plasma, radio wave propagation triple resonance 2=1469
porosity, meas. corrections 0=6377
positive ions, 5—25 keV, sputtering of Cu 1=8363
positron annihil. in solid and liq. 3=12954
quenching of 2537A resonance radiation, cross-section meas. 4=25539
Raman spectrum, relative intensities of 60 lines, 3900-6250 A 0=14816
re-emitted resonance radiation, influence of interatomic resonance 0=17713
resonance line, broadened by Ar 1=13935
resonance line (2537 A) broadening in inert gases 3=706
resonance lines perturbed by inert gas, satellite bands 1=808
resonance radiation, imprisonment, expt. and theory compared 0=2729
resonance radiation, at 2537 A, decay, rel. to incoherent scattering theory 0=13394
scattering, of K atoms, by Hg atoms, ang. distrib. 0=5866
size of immersed particles Fe, Co and Fe-Co alloys 2=15529
solid, $\alpha \rightarrow \beta$ phase transformation 2=14915
solid, liquid vapour, electron energy losses 2=23143
solubility of metals in Hg, explanation 1=9387
solution in A, spectrum and discrete sites of Hg 1=15842
solution rate of Zn, Sn, and Ag 4=5156
solns. of Gp. IIB metals 1=2750
sonoluminescence by cavitation, production 4=5192
spark discharge, ion concn., time variation 3=2553
spark spectrum, wavelength shift meas. 1=3511
specific heat, below 1°K 0=11584
specific heat, 0.35°-4.2°K, meas. analysis 4=25859
spectra, double resonance detection by freq. change, h.f.s. det. 1=3515
5461 A line, quantum numbers 3=10458
spectra, λλ5641, 4358, 4047A, $7^3S-6^3P_{012}$ triplet 2=12291
spectral line pressure shifting, empirical relations 0=5928
spectral line width, pressure broadening, temp. depend. 1=807
spectral resonance line, pressure broadening, temp. depend. 4=1210
spectrum, for monochromator calibration, near i.r. 4=24372
spectrum, multiplet and hyperfine structures of spectrum 0=20586
spectrum, 2536.52 line, influence of Kr 0=7727
spectrum, 2537 A, isotope shift 3=22484
spectrum, 6123A line, h.f.s. 0=5880
spin—spin coupling with protons 3=719
spreading on Au surface, capillarity 2=7187
spreading on Zn, effect of surface texture 3=5427
stress/strain at 1.4—77°K 1=12594
superconducting, apparent structure from far i.r. energy gap 0=1083
supercond. critical field of α- and β- phases 1=11880
superconducting, critical field curve 0=8935
superconducting, energy-gap functions, theory 3=16867
superconducting, far-i.r. absorption 0=14933
superconducting high-field props., in glass capillary 2=22119
superconducting, i.r. absorption, theory 0=10842
superconducting, law of corresponding states, expt. and theory compared 0=1074
superconducting and normal films, far i.r. transmission, 0.1-1.1 mm 0=10852
superconducting and normal, u.s. attenuation 0=232
superconducting, pressure and volume effects, crit. mag. field, Fermi surface 1=258
supercond., specific heat, and normal, equal lattice T^3 term 4=18585
superconducting, structure at critical temp. 0=18337
superconductivity, temp. dependence, u.s. investigation 1=3595
supersonic jet, in H^- ion-source 2=3090
surface activity, on Zn, internal friction study 2=21569
surface, boiling of water and alcohol 4=24447
surface energy in absence of gravity 4=8156
surface roughness, electrolytic meas. 2=10933
surface tension, orifice discharge meas. 4=24149
surface treatment of Zn, effect on tensile strength 4=28989

Mercury—contd
suspensions of Fe and Co particles, Sn adsorption and mag. props. 2=15614
thermal conductivity, near T_c, pure specimens 4=6765
thermomagnetic effects 0=6785
transition, 6^3P, optical resonance multiple scattering 0=20549
trapped in isopentane and Ar matrices, absorption spectrum, 1650 to 2600 A, 20°K 3=17528
use in MnBi production 0=3269
triboluminescence of He, A and N_2 on bubbling 0=14698
in V targets, deuteron interactions 4=22167
vapour, breakdown voltage 0=12435
vapour breakdown voltage in discharge chambers 1=10690
vapour, detection in vacuum systems by discharge spectra 4=18304
vapour, discharges, light output 3=14536
vapour, effect on S films, photocond. 0=18073
vapour, effusion from Knudsen cells 3=16642
vapour, elec. discharges, l.p., anode spots (plasmas) 0=16984
vapour, eqns. of state 3=5464
vapour, fluorescence 3=14221
vapour, fluorescence modulation excited by pulsed light 4=22305
vapour glow discharge, photon contribution to electron emission 1=9531
vapour, isolated fluorescence, optical excitation 4=9651
vapour, Joshi effect rel. to irradiation and absorption of light 1=18473
vapour lamps, 1850 and 2537 line intensities 0=9768
vapour, luminescent discharge, kinetics of positive ions 1=1893
vapour, mag. resonance by transverse paramag. Faraday effect at Larmor frequency 3=23943
vapour, mixed with Na, stimulated emission 1=798
vapour, mobilities of Hg^+ and Hg_2^+, meas. 4=8625
vapour, plasma, electron beam interaction 2=3041
vapour pressure, correlation 3=14423
vapour pressure, over range $10^{-9}-1.08 \times 10^6$ mm Hg 0=5215
vapour, resonant charge transfer meas. 4=11516
vapour, thermal cond., up to 500°C 0=8711
vapour, thermodyn. and elec. props., high-temp. 2=2761
vapour, Townsend coeffs. and Paschen's law breakdown 3=4010
vapour, Townsend ionization coeffs. 4=18683
whiskers; growth, evaporation kinetics and surf. diffusion 4=4559
X-ray exam. 3=9438
X-ray L spectrum, emission 2=6588
Zeeman effect in HgI and II 3=15286
Hg arc, stability 1=11917
Hg, atomic-beam light source, Hg^{198} 0=10758
Hg—electrolyte interface, theory 1=4104
Hg, fluorescent resonant radiation, 2537A, quenching 4=28129
Hg—inert gas, discharge 0.5 to 10 mm press., theory 3=9751
Hg—inert gas discharge, resonance radiation reflection by walls 4=18711
Hg—inert-gas discharges, positive column field 3=7475
Hg, ionization and formation of long-lived excited ions 4=25492
Hg lamp, annular, low-pressure 110 V a.c., 6-25 A 1=9480
Hg—Te collision cross-section, optical meas. 4=28156
HgII, III spark spectra in low-press. plasma 3=7609
Hg^+ laser action 4=11827
Hg^{++} radial electron density plots 4=22280
Hg_2, u.v. absorpt. spectrum, rel. to dissociation 2=8102
Hg^{197} nuclear isomer hyperfine structure, direct measurement 1=13937
Hg^{198}, double resonance line narrowing by coherent multiple scatt. 4=19960
Hg^{198}, spectral green line filtering, by resonance absorption 2=19708
Hg^{198}, spectral wavelengths 1=8814
Hg^{198}, 2537A absorpt. line in atomic beam and Zeeman filter, wavelength comparison 4=6478
Hg^{198}, wavelength meas. for standard of length 1=10464
Hg^{198} Zeeman-split absorption filter, wavelength passed 4=2830
Hg^{199} fluorescence, "level crossings" 1=9908
Hg^{199}, optical pumping, partial coherence 2=6100

Mercury—contd
  Hg^{199}, 2537A line, $F=1/2$ hyperfine component, effect of coherent multiple scatt. 4=17249
  Hg^{201} fluorescence, "level crossings" 1=9908
  $Hg^{193m,194,195,195m}$, h.f.s., isotope and isomer shifts 3=17530
  $Hg(6^3P_0)$, reaction with nine gases, spectroscopic meas. 2=6877
  $Hg(6^3P_1)$, deactivation by Co and N_2 2=6087
  Hg^+ and Hg^{2+}, ionization by electron impact 4=5560
  Hg^+ and $Hg_2{}^+$ ions, drift velocity, Hornbeck determ. method 4=14577
  in Zn, crack initiation 4=13451
Mercury compounds
  amalgam, electrode equilib. pot. 3=25832
  dihalides, mean amplitudes of vibr. and shrinkage effect for 1000°K, 1250°K and 1500°K 4=30441
  fulminate, impact sensitivity 0=8305
  halides, mercuric, mol. vibr. freqs. 4=6598
  halides, Raman spectra in molten state 3=9460
  halides, Raman spectra in molten state 3=9461
  mercuric salts in NaN_3 solns., photolysis 4=2166
  mercuric salts in $NaNO_2$ solns., photolysis 4=2165
  mercuric salts reduction in $NaNO_2$ solns., by γ-rays 4=2164
  mercuric selenide, 0·420–0·715 μ irradiated, photoconductivity 1=19907-8
  semiconducting crystals, thermoelectric cutting 4=10996
  tetramethylammonium-trichloro-mercurate, ferroelectric props. 0=6155
  CdTe—HgTe system, electrical properties 1=14464
  Hg alloys of group B metals, thermodynamics 1=2750
  Hg amalgams, adiabatic compressibility 3=16604
  Hg chalcogenides, ternary, photoelectric properties 1=11321
  Hg complex cyanides, Raman spectra in soln., CN stretching bands 0=16706
  Hg halides, absorption edge, press. depend. 0=4406-7
  Hg halides, absorption spectra in pressed disks 0=8001
  Hg halides, exciton spectra, low-temp. 3=10934
  Hg—metal binary systems, equil. diagrams 4=15741
  Hg solutions, surface tension, temp. depend. 3=21340
  Hg-subgroup B, binary, heat of mixing 0=14645
  Hg telluride, soldering with In, Sn 0=8462
  Hg(II) complexes, crystal structure 4=30861
  Hg(II) halides, aq. solns., halide nuclei exchange rate 4=2142
  Hg_2, photoelectret state 2=21223
  $(Hg_{1-X}Ag_{X/2}In_{X/2})_5In_2Te_8$ structural, optical, elec. props. 3=11301
  Hg—Ar, discharge, low-pressure positive column energy balance 3=19218
  Hg—Ar discharge, moving striations 3=12093
  Hg—Ar discharges, striation, moving, dispersion rel. 4=16449
  Hg—Ar, He, laser 4=21679
  HgAr, molecular states, potential energy curves 4=1266
  HgAr, vibrational levels, eigenfunctions 4=1267
  Hg—0.1% Au, transverse transport coeff. 3=3814
  HgBr, spectra, 4000-5000 A, dissociation energy 0=20619
  $HgBr_2$, epitaxy 0=12012
  HgBrI, mean ampl. of vibr. and thermodyn. props. 4=15348
  $Hg(CN)_2$ crystals, vibration spectra 4=22876
  $(Hg_X—Cd_{1-X})_5In_2Te_8$ structural, optical, elec. props. 3=11301
  $HgCl_2$, aqueous solns., ultrasonic velocity 0=6790
  $HgCl_2$, fused, refractive index rel. to temperature 3=11796
  $HgCl_2$, geometry and bonding, from deflection in elec. field 4=22378
  Hg_2Cl_2, absorption and Raman spectra 1=9925
  HgClBr, mean ampl. of vibr. and thermodyn. props. 4=15348

  - π^+, with p, total cross-sections and momenta 1=19265
  - π^+, with p, total cross-sections and momenta 2=22581
  - π^+–p, at 308 MeV 2=22559
  - π^+–p, at 500 MeV 0=2573
  - π^+ –p, 600 MeV, meas of T = $\frac{1}{2}$ phase shifts 4=3449
  - π^+—protons, 820-1050 MeV, single π prod. 3=7888

Mesons—contd

interactions—contd

π^+–p, at 1 BeV, Σ^+–K^+ prod. 0=9402
π^+ (1.17 GeV/c) + p $\to \pi^+ + p + \eta$, and η decay branching ratio 3=12496
π^+–p, at 1.4–4 BeV/c, total cross-sections 2=3387
π^+–p, 2. 77 BeV/c, strange particle prod. 4=16971
(π^-, p), (π^+, p), cross-sections, 8-20 BeV/c 2=1713
$\pi^\pm$, with protons, multiperipheral model 2=22599
$\pi^\pm + p \to N + 2n\pi$, isotopic spin indep. 3=7808
$\pi^\pm + p \to 2\pi + N$, cross-sections at low energy 2=16219
$\pi^\pm + p \to 2\pi + N$ reactions and f_0 (1250 MeV) isospin 4=945
$\pi^\pm$ on p, total cross-sections in range 4.5 to 10 GeV/c 1=16863
$\pi^\pm$—p, total cross-sections, 400 MeV to 1.5 GeV 1=5770
$\pi^\pm$–p, at 450–1650 MeV, total cross-sections 2=3386
$\pi^\pm$—p, 3-10 GeV/c, total cross-sections 1=2053
$\pi^\pm$ with protons, 10-20 GeV/c meas. 2=13853
π–ρ, K*, energy peaks, pseudo-reson. 4=30241
π and ρ, interactions with nucleons, scatt. and production amplitudes 3=562
π—ρ, in $\pi^+ + p \to \rho^0 + \pi^+ + p$ at 3.65 BeV/c 4=19555
π, with both Σ and Λ, through γ_5 couplings, Foldy transformation 0=13026
π, with Σ, Λ, hypothesis of restricted symmetry 0=15391
$\pi\Sigma\Lambda$, upper limits, from Lehmann vertex function representation 3=15939
π—Σ, π—Λ^0, π-K resonances, systematization 3=22174
π–Σ, relativistic dispersion relations 0=9406
π—Σ resonance, evidence from $K^- + d \to \pi + Y + N$ 1=12115
π—Σ, 1405 MeV resonance, emulsion meas. 4=25194
Σ–π, 1.89 BeV and 1560 MeV 2=22640
$\pi\Xi$, possible resonances 2=22652
π–Ξ system, resonances 2=7895
π –Ξ, $T = 1/2$ resonance of 1460 MeV 2=22651
$\pi + Y$, $\pi + K$, $\pi + \pi$ systems, new resonances 1=16683
π –Y resonance rel. to K^- absorption by complex nuclei 2=22632
ρ-exchange, occurrence in n—p elastic scattering 4=9209
ρ exchange model for isobar prod. 3=22199
ρ, γ, π coupling const. det. from π^+ photoproduction 3=4421
$\rho\gamma\pi$ coupling const. from double photoprod. expt., theory 3=10072
ρ –nucleon coupling strength 2=7896
ρ –nucleon, 2π exchange potential 2=3327
ρ—π bound state, rel. to ω-meson 4=27892
$\rho\pi\gamma$ and $\omega\pi\gamma$ coupling const. meas. 4=9255
ρ (π—π) reson., narrowness, explanation 3=22171
ρ, Regge trajectory and $n + p \to p + n$ scatt. sharp forward peak, 2.85 GeV 3=22190
ρ, resonances 2=16214
ρ^-, ρ^0 (π—π) reson. ang. distrib. in $\pi^- + p \to 2\pi + N$, 3.3 BeV 3=22172
ρ-, role in high energy n — p charge exchange 4=9261
$\theta_1 + \theta_2 + N$ system, final-state interacts 4=5941
θ_2 in emulsion 0=381
w–baryon coupling const., calc. 3=24627
W, rel. to origin of large mass 4=21886
Y particles, prod. in p–p collisions, theory 2=3414
Y_0^{**} virtual bound state 2=1710
Y_1^*, global symmetry resonance in π – Λ scatt. 2=3395

magnetic moment

fourth order, historic lecture 4=19376

W, radiative corrections 4=21885

mass

rel. to baryons 4=3302-3
and bosons, composition 3=17230
composite particle model 1=3146
degeneracy broken by Yang—Mills gauge field 4=27762
500 m_e particle, search for in cosmic rays 1=16924
~ 525m_e, evidence for 0=5574
mass spectrum, in Heinsenberg's theory 0=9386
mass spectrum, by nonlinear field theory 3=22056
mass spectrum of sea-level cosmic rays, 30-2000 m_e, search for anomalous lifetime values 0=2612-13
meson and hyperon charge multiplets, mass differences 2=13824
pseudoscalar meson in Nambu's model 4=30154
regularities, theory 2=20281
relation to propagator props. 1=2024
relations, rel. to baryons 4=11951
Schwinger's σ-meson 0=3977
720 MeV, existence, discussion 0=11188
theory employing coupling constants of weak and electromag. interactions 0=15381
underground cosmic rays 0=9457
vector meson, 2-dim. model, not determined by gauge invariance 4=24969
vector mesons, bare and physical masses 1=13458
zero, pseudoscalar, existence 4=24989
f^0, 1260 MeV, resonance width 200 MeV 3=17313
K 2=9918
K, rel. to charge, theory 0=7403
K, electromag. difference, self-energy theory 1=10831
K, electromag. splittings 1=3205
K, mass difference, weak interaction theory 2=1721
K, neutral, mass diff. 2=5733
K, rel. to relative parity 0=20227
K, from Σ^+ pionic decay 2=12007
K_1 -K_2 difference 2=13875
K_1–K_2 mass diff., rel. to intermediate boson theory 0=15252
K_1-K_2 difference, from K_1 regeneration 2=317, 22628
K_1–K_2 mass difference, meas. 0=17410
K_1—K_2 difference, from 2π 400 MeV reson. 4=12057
K^--mesons 1=3242
K^0-$\bar{K}^0$ difference, calc., from decay 2=18179
K^0—$\bar{K}^0$ difference, calc. from decay 3=6062
K^0 and $\bar{K}^0$, gravitational masses 1=533
K^0 and $\bar{K}^0$, gravitational masses 2=13876
K^0 and $\bar{K}^0$, gravitational masses 3=6073
K_1^0 from $K_2^0 \to 3\pi^0 \to$ 6 electron pairs 4=25175
K^0, K1–K2 mass difference 0=11220
K-mesons, K_1^0 —K_2^0 difference 1=3230
K^0, K_1^0–K_2^0 mass difference 2=9914
K_1^0-K_2^0 difference 2=22624
K_1^0—K_2^0 mass difference 3=15027
K_2^0—K_1^0, mass difference 3=4460
K_1^0—K_2^0 mass diff., rel. to $\Delta S = 2$ interactions 1=5787
K_1^0—K_2^0 difference, direct K_1^0—2π interaction proposed 1=16887
K_1^0- and K_2^0-meson, difference theory 3=2317
K_1^0-K_2^0, from $K^0 \to e^\pm + \pi^\mp \mp \nu$ time distrib. 4=21930
K_1^0—K_2^0, from K, η^0 decay mechanism 4=6123
K_2^0–K_1^0 and $K \to 3\pi$ on current—current picture 4=27897
K_1^0-K_2^0 difference, rel. to π-π reson. state 2=22623
K_1^0–K_2^0 mass difference, possible det. from K^0 decay 0=1306
$K_{1,2}^0$, mass difference, sign 4=947
K^0_1 and K^0_2, mass difference sign determination 1=16888
K_1^0-K_2^0, sign, from intermediate π^0, η^0 and unitary symmetry 4=16965
K_1^0-K_2^0 sign, proposed method of obs. by K^0 prod., scatt. and decay in K_1^0 mode 3=22194
K_1^0—K_2^0, difference, theory 2=3400
K_1^0-K_2^0 difference, from weak interactions 2=22622
K^+ - K^0 difference, dynamical consequences 1=536

K^+, $\gamma + p \rightarrow K^+ + \Sigma^0$, low-energy 3=17334
K^+, K^-, cross-section, total, 3-28 GeV 1=10071
K^+ and K^-, in pion–nucleon collisions 0=2594
K^+–K^- ratio, in p–π collisions 0=13059
K^+ and K^0, by pions, charge symm. test 3=15028
$K^+ + \Lambda$ photoprod. from H at 1200 MeV 4=25177
$K^+\Lambda^0$, photoproduction near threshold, K^* "particle" exchange approx. 3=15041
$K^+ \rightarrow \mu^+ + \pi^0 + \nu$, form factors 2=20417
K^+ photoprod. in complex nuclei, yields meas. 4=12198
K^+, photoprodn. in hydrogen 2=22625
K^+, photoproduction in H, cross-sections 0=15439
K^+, photoproduction on H, at 1160 MeV, with hyperon prod. 0=382
K^+, from π^+–p interaction, at 1 BeV 0=9402
K^+, by $\pi^+ + p$, at 1170 MeV/c, amplitudes 2=22650

Mesons—contd
production—contd
K^+, $\pi^+ + p \rightarrow \Sigma^+ + K^+$, invest. 1=19281
K^+, by $\pi^+ + p \rightarrow \Sigma^+ + K^+$, near threshold 2=18159
K^+, in proton–nucleus interactions at 9 GeV 0=4088
K^+, by protons in emulsion at 9 GeV 2=1869
K^+, in "Saturn" accelerator, at 0.6 - 2.92 BeV 1=12119
K^+, by $\Xi^+ + p \rightarrow K^+ + K^+ + \gamma$, K^+–K^+ interaction 0=17415
K^+, by $\Xi^+ + p \rightarrow K^+ + K^+$, possible det. of cascade hyperon parity 0=17423
$K^{-\pm}$, from Al-p and Be-p reacts. at 10-30 BeV 2=20627
$K^* + N$, rel. to hyperon 1815 MeV resonance 3=4420
K^*, from $K^- + p$, theory rel. to spin 2=9917
K^*, in π^-–p interactions 2=11982
K^*, by 2.77 BeV/c π^+ on p 4=16971
$\bar{K}^*$, in $\bar{K}N$ collisions, as vector meson 3=6067
K', in K^-—p scatt., lifetime and spin 1=5776
K', by $K^- + p$, spin det. 1=7283
K', new scalar meson, by $\pi + p$ collisions 1=5775
K_V, in K^-—p scatt., lifetime and spin 1=5776
κ, in K^-—p interactions 4=16966
κ, $K^-\pi^{+,-}$ upper limb in K^-—p 4=21934
μ beam, pure monoenergetic, at 2 BeV/c, by bevatron 1=7257
μ beams, very high energy, by bremmstrahlung 4=16924
μ, coherent, in Coulomb field of nucleus 3=10070
μ, different energy beams, in channel of mag. quadrupole lenses, theory 4=14841
μ, from electron collisions, by e.m. interact. 3=592
μ-mesons, in $e^+ + e^-$ collisions 1=3203
μ, with e, by e^+—e^- collision 3=7878
μ, $e^- + e^+ \rightarrow \mu^- + \mu^+$, hard-photon emission correction 4=25070
μe-pair in nuclear Coulomb field 2=9781
μ, in γ-e cascade 4=15118
μ, intensities from 1-10^3 GeV N—N interact. 3=4366
μ, by neutrinos, at great depth, detection possibility 3=19608
μ, by $\nu_\mu + N$, calc. from μ prod. by ν_μ on nuclei 4=28016
μ, by $\bar{\nu}$ resonant scatt. on electrons, cosmic-ray evidence 1=483
$\nu + Z \rightarrow \mu + \pi + Z$, in nuclear Coulomb field 3=2293
μ in nucleon—nucleon collisions 1=16682
μ pairs, by C + γ, var. momentum transfer squared 4=25371
μ pairs, by colliding electron beams, calc. 4=6024
μ-meson, pairs, e.m. prod., cross-section near threshold 1=19094
μ pairs, by electron and positron colliding beams, QED validity 0=17372
$\mu\mu$ pair by high energy electron, theory 2=9882
μ pairs, from high-energy photons and electrons, cross-sect. calc. 3=24756
μ, pairs, in multiple particle prod., e.m. process 3=19593
μ, pairs, in multiple particle prod., e.m. process 3=19594
$\mu^+ + \mu^-$ pairs, by ν–nuclei scatt. 2=20380
$\mu^+\mu^-$ pairs by ν—nuclei scatt. 3=7880
μ-pair from N^*, from π—N collision, cross-section calc. 4=30243
μ pairs, $\nu + Ar \rightarrow \nu + Ar + \mu^+ + \mu^-$, cross-section in Coulomb field 1=19159, 2=22465
μ pairs, photoprod. in carbon, by 1000MeV bremsstrahlung of electrons 3=7879
$\mu^+\mu^-$ pairs, photoproduction on electrons, cross-section 4=19494
μ pairs, in positron annihilation 0=15417
μ pairs, quasi real process method 0=7278
μ, pair prodn., spin correl. 3=10137
μ, in π decay, isotropy 1=19228
μ, from π and K-meson decay, in cosmic rays 0=7441
μ, in $\pi-\mu$ decay, ang. distrib. 2=3373, 9884, 22551
μ, by p in fixed force field, competition with π prod. at high energies 1=4806
μ-mesons, from scatt. on protons 1=13465
μ-meson showers, in cosmic rays, lateral distrib. 1=2121
μ, from 10^{11} to 10^{18} eV in atmosphere by π and K decay 1=16834
μ, in weak interactions, experimental anomaly 1=4806
μ^-, by $e^- + e^- \rightarrow \mu^- + \mu^-$, possible occurrence 1=5787
$\gamma + \nu \rightarrow X^+ + \mu$ 2=16235
$\gamma + \nu \rightarrow X^+ + \mu^-$ 3=6060

    - B, ρ, and π—π scatt. 4=27888
    - B particle, spin and parity, meas. 4=21916
    - B, spin—parity, possibilities 4=19577
    - B^-, spin and parity, by plotting $B \rightarrow \omega + \pi$ events 4=16958-0
    - η prod. 4=27890
    - η°—p, $\gamma + p$ prod. 4=25162
    - f^0, B as two decay modes of I = 1, J = 1, parity meson 4=16957
    - f^0, isospin 0, compatibility with $2\pi^0$ decay in $\pi + p \rightarrow N^{*++} + f^0$ 4=21914
    - $f^0(\pi\pi)$, spin, from π^-—p collisions for 3.5 BeV/c π's 4=6126
    - $F_0(\pi$—$\pi)$ resonance and Pomeranchuk trajectors 3=17314
    - f_0, rel. to p—γ scattering 4=15060
    - f_0, recent bubble chamber experiments at C.E.R.N. 4=16841
    - f^0 spin, from $\pi^- + p \rightarrow n + \pi^+ + \pi^-$ at 3.7 GeV/c 4=19576

- **Mesons**—contd
  - **resonances**—contd
    - $f_0 \rightarrow 2\pi^\circ$ or $\pi^+ + \pi^-$ ratio from missing peaks in $\pi^+ + d \rightarrow p + p + f_0$ 4=25154
    - in $\gamma + p \rightarrow p + \pi^\circ$ or $n + \pi^+$, at 2.9 BeV 4=25162
    - I^{+-} with isotopic spin I = 0, as π-ρ reson., prediction 4=19573
    - K—baryon. states selection rule 4=3468
    - $K\bar{K}$, δ, with $J = 0^+$, I = 1, from $\bar{K} + p \rightarrow \Xi + K$, and ϕ as isoscalar member of vector meson octet 4=25168
    - $K\bar{K}$, φ, as isoscalar member of vector unitary octet 4=949
    - K—N high-energy collisions, production rel. to decay 4=24997
    - $\bar{K}NN$ bound states, possible existence 4=9277
    - $K\pi$ 730 MeV (κ), SU(4) assignments 4=9256
    - $K\pi$ in $T = {}^3\!/_2$ channel up to 1 GeV mass 4=6132
    - $K2\pi$ and $K3\pi$, quantum number determ. 4=9275
    - $K\pi\pi$, from $\pi^- + p \rightarrow \pi\pi K\Lambda$ or $\pi\pi K\Sigma$ 4=16956
    - $K_1^0\pi^+\pi^-$, in $\bar{p} + p \rightarrow K_1^0 + K_1^0 + \pi^+ + \pi^-$, at 1.230 GeV/c 4=19575
    - in K^+ prod. by Be + 2.95 GeV p^2, B = 2, S = −1. 4=30263
    - K—p collisions, cascade particle prod. model 4=6130
    - $K^- + p \rightarrow \Lambda^\circ + \pi^+ + \pi^+ + \pi^0 + \pi^- + \pi^-$, enhancement at 959 MeV effective mass 4=27891
    - K^-p, up to 1765 MeV mass 4=6132
    - K*, self-consistent bootstrap calc. 4=3479
    - K*, 730 MeV 4=15102
    - $\bar{K}^*$ decay from $K^- + p \rightarrow \bar{K}^\circ + \pi^- + p$ at 1.45 GeV/c 4=25157
    - K*, in $\gamma + p \rightarrow K^+ + \Lambda$, effects isolation 4=21931
    - $K^* \rightarrow K + \gamma$ rel. to $K^* \rightarrow K + \pi$, width ratio 4=3478
    - K*, mass and width, from one-particle exchange forces 4=9274
    - K* reson. model, from p exchange 3=15025
    - K* resonance, Regge trajectory 3=19699
    - K* (725) and unitary symmetry failure 4=6134
    - K* spin alignment and exchange mechanism in $\pi^-p \rightarrow \Sigma^0K^*$ 4=21918
    - K*, summary, rel. to 8-fold way and Regge trajectories 4=21910
    - κ, and N—Λ mass diff., Sakata model chain approx. 4=25158
    - ΛK°, from π^-p at 829 MeV 4=25193
    - $\Lambda N\pi$ system, Feynman rules 4=21755
    - 960 MeV, from $K^- + p \rightarrow \Lambda +$ neutrals 4=21909
    - $\mathcal{N}$, in $\pi^- p \rightarrow \pi^- \pi^- p \pi^+$ 4=12041
    - rel. to N—N potentials 4=25076
    - and N—N scatt., π, η, ρ, w, f exchange 4=16885
    - N*, Compton effect calc. 4=16961
    - N*, by e + p and K + p, rel. to ρ exchange 4=9262
    - $N^* \rightarrow \mu^+ + \mu^- + N$, cross-section calc. 4=30243
    - $\nu + N \rightarrow \mu^- + N^*$, 4=30267
    - $N^*(\pi^- + p$, 1688 MeV), by $\pi^- + p \rightarrow \pi + p + \omega$, 3.7 GeV/c 4=15098
    - N*, in π^-—p 10 GeV/c interactions, meas. 4=19557
    - N_{33}^* reson., by $\pi + p$, K + p, calc., low momentum, on SU_3 symmetry 4=16960
    - $N^{*++}_{3/2,3/2}$, prod. in $\pi^+p \rightarrow p\pi^+\pi^0$ at 4 GeV/c 4=21920
    - ω, rel. to bound state of p—π system 4=27892
    - ω, decay width, from $K^- + p \rightarrow \Lambda + \omega$ 4=9268
    - $\omega \rightarrow e^+ + e^-$, from $\pi^- + p \rightarrow n + \omega$ 4=12054
    - ω, mass and width, self-consist. calc. 4=21922
    - ω, from $\bar{N} + N \rightarrow \pi + \omega$, ang. correl. 4=6039
    - ω—ϕ mixing, dynamical model 4=6129
    - ω-ϕ mixing, by vector mixing theory 4=19391
    - $\omega \rightarrow 3\pi$ width, rel. to R-conjugation invariance in strong interactions 4=19578
    - ω-prod. 4=27890
    - ω, prod. by $\pi^+ + p \rightarrow \pi^+ + p + \omega$, 3.5 BeV/c 4=6107
    - ω, spin, harmonic-oscill. model 4=21923
    - ~ 1270 MeV, B = 0, S = 0, $I^G = 1^-$, $J^P = 0^+$, prediction 4=16951
    - ϕ as isoscalar member of vector meson octet from KK δ reson. with $J = 0^+$, I = 1, 4=25168
    - ϕ, as nearly bound state of $K\bar{K}$ system 4=21745
    - ϕ—ω mixing of "pure" states |Y> and |B> 4=12063
    - φ, by $\pi^- + p \rightarrow \pi^- + p + \varphi$, 3.7 GeV/c, upper limit 4=15098
    - $\phi \rightarrow 3\pi$ width, rel. to R-conjugation invariance in strong interactions 4=19578
    - ϕ, properties and effect on η-decay 4=9265
    - π—baryon systems, higher, production 4=19574
    - $\pi^+ + d \rightarrow p + p + X^0$, $X^0 \rightarrow$ neutrals, 6 GeV/c 4=21915

    K, absorption peak, new collective electron state and coherent pairing of the second kind, explanations 4=26210-11
    K and alloys, thermoelectric power at low temps. 1=17814
    Li, compressibility, rel. to exchange charge volume 3=23282
    Li, electrons, X-ray Compton scatt. and momentum distrib. 4=6773
    Mg, Fermi surface, spin—orbit splitting, calc. 1=2384
    Mg, Fermi surfaces, rel. to elec. resistance anisotropy 1=3726
    Mn, Heisenberg exchange interaction between 2 atoms 4=25654
    Na, compressibility, rel. to exchange charge volume 3=23282
    Na, elec. resist. due to twinning, theory 4=22686
    Na, electron mass shift calc. 3=10588
    Na, electron wave-functions 1=11173
    Na-NH_3 soln., bonding 2=1151
    Ni, metal—insulator—metal, press. transformation, due to electronic level shifts 4=6928
    Pt, Fermi surfaces, rel. to elec. resistance anisotropy 1=3726
    Sn, grey, valence band, l.c.b.o. method 3=779
    Te electronic band structure 1=17448
    Te, electronic structure and lattice mechanics 4=12680
    U, group-theoretical analysis of α-modification 1=17449
    Zn, Fermi surface, magnetoelec. data 3=12945
    Zn, Fermi surfaces and electron mean free path 1=3598
    Zn, props. calc. from first principles 3=8395
Meteorites
    See also Meteors
    (new heading introduced in 1964; for previous entries see Meteors)
  arrival rate at Earth's surface 4=2410
  Bosumtwi crater, age and chem. composn. 4=15935
  chemical analyses, 118 particles 4=4894
  chrondrules, formation theory 4=7970-1
  composition, comparison with photosphere 4=26952
  and cosmic ray primary history, review 4=25230
  impact, and drop with plastic surface 4=23901
  inert gases, and history 4=26930
  iron, eight, cosmic-ray exposure ages 4=23899
  luminescence, cathode, due to Mn 4=23900
  Mars I station trajectory study 4=26928
  metallic, He contents 4=10887
  micrometeorites, vel., mass, radiance, charge and flux determ. 4=26931
  microparticle accel. methods to meteorite velocities 4=5726
  Pantar, heavy element determination 4=2407
  penetration depth in earth, shock wave effects 4=7817
  penetration, Explorer XIII and XVI satellites 4=10888
  rel. to solar system's early history 4=7969
Meteorites—contd
  solid particles simulation, artificial acceleration methods 4=11728
  solid planetesimal agglomeration method 4=7973
  stone, diffusion loss of radiogenic and spallogenic rare gases 4=20913
  stone, radiogenic, spallogenic and primordial inert gases 4=23898
  stony, Ba content 4=2409
  stony luminescence 4=23892
  tektites, origin 3=13878
  twin, large, orbital perturb. 4=2406
  Ge isotopic composition 4=2408
  He and Ne isotope contents in Fe meteorites 4=20912
  Mg, Si, S and Fe, prod. rates of He^3 and Ne^{21} 4=15934
  Xe^{129}, and history 4=26930
Meteorological instruments

all-sky rates in southern hemisphere 2=4845

Meteors—contd
appearance and disappearance heights rel. to molecular bombardment, theory 1=18065
associations, radar, visual and photographic obs. 4=15954
asteroidal fragment, unusual spectrum 0=18710
australites, origin in meteorite crater 3=3563
australites, Th and U content by α-counting 3=7025
azimuthal distrib. of oblique refl. 0=14391
bolide, of May 11, 1955, photographic study 1=18057
Brewster meteorite, mag. props. 3=7026
bright photographic, densities calc. 3=3557
burst communication, during 12-16 Nov. 1960 solar event 1=18174
cameras, meniscus Schmidt 3=16319
chemical element occurrence 1=15411
chondrite Pantar, inert gas content 2=17267, 19293
chondrites, carbonaceous, Pb mass spectrum 2=17266
chondrites, γ-spectroscopic studies 3=3558
chondrites, occurrence of whitlockite 2=21710
chondrites, origin 2=4753
chondrites, radiation age 2=4752
chondrites, radiation ages 1=12744
composition and origin, review 3=16366
cosmic dust, metallic with amorphous attachments, collected Scilly Isles 2=11121
cosmic-ray ages in meteorites 0=8495
density 4=26929
density, faint photographic 4=29433
density of meteor matter, dust cloud around earth 2=13117, 17236
deposition on Antarctic ice cap 3=13872
diamond, origin in meteorites 2=4362
diamond prod., effect of impact 2=8761
diffraction of e.m. waves by ionized trails 1=6962-3
drifiting trails, high-altitude winds 0=8367-8
dust, rocket and satellite data 3=21064
e.m. wave scattering, on trails 3=19448
earth ocean basins and lopoliths, lunar maria, impact formation? 3=11384
and earth, rotation axis changes on collision 3=21022
echoes from irregular trails 0=14388
echoes, radar obs. rel. to trail investig. 2=11163
echoes, received by forward scattering, altitude distrib. 4=13962
echoes, after 12 Nov. 1960, magnetic storms 1=21059
effect on meteorites 4=13961
Ehole meteorite, radioactivity meas. 2=21708
ejection from Jacobini—Zinner comet 4=2403
electric discharge during flight 0=6577
electron density in trails 0=8494
11 October 1960, S.African observations 1=1636
erosion in space 0=10496-7
feldspar? 0=10499
fireball, Scandinavia, Jan 1954, radiant and orbit 1=15433
15th magnitude, radar studies 2=17307
fireball, exploding, magnitude-10 (Scotland, 18 June, 1962) 2=17265
fragmentation analysis 3=16364
fragmentation, effect on mass distrib. data 3=5251
Geminid, radio echo obs. 0=4874
Geminid shower, 10-19 Dec., 1958, structure 0=18718
Giacobinid stream, formation 2=11120
Grant meteorite, He^3 distribution, original mass determination 1=5142
gravitational conc. of particles near earth 2=24086
head echoes 1=6744
head echoes from trails 2=4846, 11164
height distributions and fragmentation hypothesis 1=17
height variation with velocity and magnitude 0=18715
history, and ambient Xenon 3=11525
hourly rates, rel. to meteoroid parameters, atmosphere, and radar system 2=905
impacts, on earth and moon, frequency versus mass for stoney and Fe meteors 3=13874
incident flux variation with solar longitude 4=2404
incoming rate, lunar effect 3=13777
influx, rel. to dust concn. in atmos. 3=3469
Infrared spectra 2=4757
and interplanetary matter, Fe_2O_3, accumulation on earth 3=18593
ionization and mag. field alignment 2=11165
ionization probability, rel. to velocity 0=18716

Meteors—contd
ionized trail, formation, diffusion 0=18712
ionized trails, e.m. wave scatt. 3=25984
in ionosphere, rel. to fading of 70-200 kc/s radiowaves 1=1545
ionosphere turbulence obs. 0=12175
iron meteorite, magnetic props. 1=5140
iron meteorite, magnetic props. 1=10384
iron meteorites, lead content 1=18
jumping-film camera, for meteor photography 3=11488
Kordylewski clouds rel. to lunar-mass deform. meas. 2=15306
Leonid spectrum, Nov. 15-16, 1961 3=9184
Leonid, stream, dust-particles, micron-size 2=6986
light curve anomalies rel. to fragmentation 1=15434
light from train, decay 0=12204
luminosity and ionization 3=5252
magnetic effects, mechanism for 3=13844
magnetic globules on surface 0=3412
Mars I station trajectory study 4=26928
mass distribution, from radio echo data 0=18706
mass distribution by radio echo methods 1=8028
mean hourly rate, from radar data, calc. 0=18717
mean radiant path of photographic showers 0=12269
Mercury, erosion 3=16352
meteor-burst communication, channel capacity 2=1600
meteor-burst communication, multipath effects 2=1601
meteor dust, space vehicle study 3=3555
meteor–planet collision 0=6996
meteor trail drift study of high altitude winds 1=6605
meteoric dust measured by Explorer I 1=6706
meteoric iron particles, fallout 1=6705
meteoric particles, steady-state space distrib. 3=7023
meteorite Abee, Xe ratio 1=18066
meteorites, ablation analysis for trajectories 2=15324
meteorites, age, review 2=24108
meteorites, ages by radioactive decay, rel. to cosmology theories 3=7017
meteorites, Aroos, V^{50} and K^{40}, cosmic-ray produced 2=4756
meteorite "Breitscheid," Na^{22} content 1=9260
meteorite Breitscheid, primordial rare gases 2=15326
meteorites, Bruderheim, chrondules, excess Xe 3=11524
meteorites, Bruderheim, K^{40}, Al^{26}, Mn^{59}, Na^{22} radioactivity 2=2530
meteorites, Bruderheim, mineral analysis 2=4755
meteorites, Bruderheim, petrography and chemical composition 2=2531
meteorites, Bruderheim, radioactivity species produced by cosmic rays 2=2528
meteorites, Bruderheim, tritium, $A^{37,39}$ content 2=2529
meteorites, chondrite phase composition 3=9186
meteorites, chondritic, magnetic properties 1=18061
meteorites, cosmic ray ages 1=9263-5
meteorites, cosmogenic A and Ne 1=18060
meteorites, cosmogenic C^{14} and terrestrial ages 2=17118
meteorites, cosmogenic nuclide prodn., rel. to spallation by 3BeV protons 3=8101
meteorite development in asteroidal bodies 1=2607
meteoritic dust, distrib. in ocean sediments, review 2=17269
meteorites, dust particles, rel. to atmosph. props. 2=9008
meteorites, dust particles, rocket data 2=9010
meteorites, extinct Pb^{205}, search 1=15438
meteorites, Fe with Sc^{45} reaction product 1=9261
meteorite frequency, history 2=15325
meteorites, γ-active isotopes, positron radiation 2=4751
meteorites, I content and I^{129}–Xe^{129} ages 1=15440
meteorites, impact on solid bodies, theory 2=9068
meteorites, inert gas study, rel. to solar system element age, review 2=15304
meteorites rel. to interstellar debris, theory 2=6979
meteorites, iodine content, geochemical character 2=4754
meteorites, iron, Ag^{107} excess from extinct Pd^{107}, age of formation 1=2608
meteorites, iron, age, Re/Os method 2=4758
meteorites, iron, cosmic-ray produced rare gas distribution 1=15435
meteorites, iron, rel. to cosmic-ray 10^8–10^9 yr variations 2=18220
meteorites, iron, cosmogenic inert gases 2=4759
meteorites, iron, cosmogenic nuclides 2=19290
meteorites, iron, exposure age, from Cl^{36} decay 1=9266

Meteors—contd
meteorites, iron, K isotope abundance and radiation age 2=2532
meteorites, iron, radioactive nuclides produced by cosmic rays 2=2527
meteorites, iron, V^{50}, $Ca^{43,46}$, K^{40} isotopes 2=24105
meteorite isotope measurements rel. to cosmic ray spatial constancy 1=15437
meteorites, isotopes due to slow neutron irradiation 2=4750
meteorites, K–Ar ages, rel. to gravitation interaction decrease 3=11523
meteorites, lunar surface as impact counter 0=18693
meteorites, Mo isotopic anomalies 2=11117
meteorite Nedagolla, dendritic structure 3=7027
meteorites, Ne and He isotopic abundances 2=951
meteorites, Ne^{20-22} content 1=7982
meteorites, origin, theory 1=15439
meteorites, particles on Sputnik III 2=9009
meteorites, Pt and Ir abundances 2=24107
meteorites, radioactivity rel. to solar cosmic rays 2=21709
meteorites, rare-earth element isotope abundances 3=13875
meteorites, review of recent advances 2=19291
meteorite, Richardton, I–Xe dating 1=18058
meteorites, ring system around Jupiter 2=24102
meteorites, Ru isotope composition 2=24106
meteorite St. Margaret, June 1962, compn. 3=3559
meteorites, several μ in size, flux meas. 2=11068
meteorites of short cosmic-ray exposure age 3=3560
meteorites, Siberian 1908, mass estim. 2=8980
meteorites, Sikhote Alin, anomalous exposure age 1=9266
meteorites, Sikhote Alin iron meteorite 3=11528
meteorite, Sikhote-Alin, U^{235} content 2=4588
meteorites, space erosion 1=18059
meteorites as space probes for cosmic radiation spatial constancy 1=15436
meteorites, sputtering by 20 keV A^+ ions rel. to space erosion 3=1516
meteorites, stone, high inert gas contact 2=6999
meteorites, stone, inert gas abund. and isotopes 2=17268, 19292
meteorites, stone and iron, origin, rel. to apparent age discrepancy 1=9258
meteorites, stony, C^{14} content 1=19476
meteorites, stony, remanent magnetization, possible origin 3=11065
meteorites, structure 2=2399
meteorite Tabor, primordial inert gases 2=15327
meteorites, thermoelec. currents 2=11118-19
meteorites, transitional aerodynamic drag 3=13776
meteorites, Tunguska, cometary nature 2=4749
meteorites, Xe isotope composition rel. to solar system chronology 1=15417
meteorites, Zn and Hf abundances 3=11527
meteoroid, Fe, temp. in space calc. 4=10886
meteoroid trails, ionization, theory 2=903-4
meteoroids, path curvature in earth's atmosphere 2=952
meteoroids, space-vehicle penetration 4=2469
meteoroids, vel. distrib. rel. to that of meteors 2=954
meteors, sporadic, orbit measurements by radio echoes 1=12785
micro, collisions with needles, West Ford 3=25994
micrometeorite distribution near earth 1=15297
micrometeorite impacts ≤ 135 km, artificial satellite measurements 1=9259
micrometeorite meas., satellite and ground-level data comparisons 1=21014
micrometeorites, distrib. near earth, satellite data 1=18062-3
micrometeorites, meas. by recoverable sounding rocket 2=17264
micrometeorites, rocket and satellite studies 2=13120
micrometeorites, satellite measurements 1=5141
micrometeoroid fluxes, new investig. method by orbiting metallic wires 4=4893
microparticle accel. system to simulate meteors 4=3062
moon effect 4=13961
moon impact and earth atmospheric ice nuclei 3=21038
nanometeorites, evidence for substances 1=15441
oblique echoes from over-dense trails 0=4875

Meteors—contd
observations, 1951-9, in Johannesburg 0=18708

Richardton chondrite, analysis rel. to age of elements 2=938
Russian recent studies 2=9067
scatter bursts from TV transmitters, sweep-freq. obs. 2=906
scattering echo, over-dense ionization column 3=16428

Meteors—contd
Sextanid orbit, radio obs., little diff. from Geminid 4=20939
shock front interaction with atmosphere, spectra, gas-dynamics 4=13926
shower dust, correl. with rainfall peaks 4=17890
shower ionization, rel. to VLF phase perturbation 1=15298
showers, effect on rainfall 1=20808
showers, effects on upper atmospheric densities 1=21015
showers, radar observations, latitude dependence 2=4844
showers in Southern Hemisphere 1=16
showers, visual and radar data from Southern Hemisphere 1=18064
siderolites, structure and chem. comp. 0=16536
Sikhote-Alan, age 0=6579
solid particles in space 0=10495
spectra, cross-sections for atomic and molecular emissions 4=25590
spectra, on interaction with atmosphere, gas-dynamics 4=13926
spectrum, wake, Leonid 3=16365
spherules, black, magnetic, from atmosphere, collection 2=19228
sporadic, annual variation in radiant distrib. 4=2405
sporadic, S. hemisphere survey of radiants 0=18681
sputtering rate under solar-wind bombardment 3=23667
stone, He and Ne contents, rel. to ages 3=13877
stony meteorite orbits 1=12743
streams, effects of crossing planet 0=18713
tectonic radioactivity, age, using Pb isotopes 3=7024
tektites, cosmic-ray exposure history, rel. to origin 3=1515
tektites, electromagnetic constants, comparison with lunar surface 1=5145
tektites, formation, cometary mech. 3=11522
tektites as natural earth satellites 1=5144
tektites, origin from moon, appl. of re-entry research 1=1637
tektites, origin by O isotope studies 3=9014
tektites, parent body origin hypothesis 3=3562
tektites, theories of origin 3=3561
time rate, mean-square deviation, determ. 2=953
trails, ambipolar diffusion 4=10912
trails, ambipolar diffusion, height relation 1=5143
trails, charged-particle density distrib. 1=6704
trails, dense, specular echoes 2=11162
trails diffusion in earth's mag. field 4=30978
trails, eddy diffusion 0=12164
trails, electron attachment to neutral particles 1=12742
trail formation, mechanism 2=902
trails, ionization, theory 4=4892
trials in lower ionosphere, wind distortion 3=16277
trail luminosity, theory 0=18709
trails, radar echo study 1=18175
trails, radar study, meteoric dust distrib. 0=18711
trails, radio reflection study 2=4847, 15405
trails, radiowave propag. by refl., survey 4=14913
trails, radio wave scattering 3=7049
trails, reflection of broadcast transmissions, confusion with solar r.f. bursts 2=13179
trails, v.h.f. field-aligned scatter 2=11803
trail widths 2=11116
trajectory study, using stereophotogrammetric methods 0=18707
Tungus meteorite, height of explosion 3=16367
Tungus meteorite, speed and energy 2=2526
turbulence at meteor heights 0=10404
upper atmos. winds det., theory 0=14390
vapour condensation products, rel. to noctilucent clouds and rainfall anomalies 4=10714
vapours, secondary particulate matter 2=9011
velocities from c.w. radio diffraction 0=14403
velocity determination 1=1633
velocity during evaporation 0=6578
velocity, extra-atmospheric, det. from photogr. records 3=5220
velocity meas., radiowave pulse-diffraction method 0=18714
velocity reductions, from continuous-wave radio records 1=9257
visual and photographic obs. 0=21388
wakes, auroral green line 0=6575

- **Meteors — contd**
  - wakes, spectra, Hα and N I lines 4=29432
  - Washington County meteorite, gas content 2=21707
  - argon–potassium ages 0=7
  - B abundance and B^{11}/B^{10} ratio, and in earth 3=13876
  - Fe meteorites, Ar^{39}/Cl^{38} ratio rel. to age 3=4491
  - Fe, meteoritic, thermal properties 3=11526
  - He content 0=6580
  - He content, cosmic-ray-prod. 0=12271
  - Re and Os content det. 0=12273
  - T content 0=6581
  - Xe content, isotope analysis 0=12272
  - Xe^{129} content of Richardton meteorite 0=18720
- **Mica**
  - adsorbed water 4=21149
  - adsorption of Bi, study by Bi β-decay recoil 2=15106
  - adsorption of water, energy, rel. to mica crystal props. 4=7693
  - biotite, Fe^{57} Mössbauer absorption 3=4802
  - birefringment plates, phase variations 1=18624
  - capacitors, standard, effect of temp. on stability 4=11491
  - charged particle tracks, electron micr. study 3=2842
  - cleavage, electrostatic theory 0=10292
  - cleavage process, elec. forces, expt. study 0=8174
  - conductivity, elec., induced by γ-rays and neutrons, time var. 4=20402
  - crystal dislocations, multiple electron diffr. contrast obs. 3=20189
  - damage effects of fission products, track visualization by electron microscope 0=19979
  - dislocation grids, electron microscope study 1=3673
  - dislocations, in foils, electron microscope obs., reflections 4=10585
  - dislocations, obs. 1=19784
  - elec. breakdown, at 3 kMc/s 0=20965
  - electrical conductivity under strong electric fields 1=7624
  - electron diffraction, energy loss to lattice 1=6521
  - electron microscope beam heating effects 4=10586
  - electron microscopy, moiré patterns interpret. 2=6865

Abbe's theory, demonstration apparatus 2=9374
achromatic, laterally, compensating eyepiece 2=13438-9
attachment for dip-angle meas. of tracks in nuclear emulsions 1=13258
axicon, for locating shiny surfaces 0=2232
for bubble chamber photograph meas., construction 4=14989
coincidence split image eyepiece 3=18971
conoscopic pattern revelation in microcrystal components 0=16823
dark-field condenser, for spectral depend. of scattered light 0=14848
dissecting type, continuous focusing 3=16754
use in double double-beam microscope spectrophotometer 4=27320
double microscope for visible light 1=18589
double, performance and use for structure studies 2=13444
for electron diffr. photograph meas., binocular 4=17803
electronic scanning type for densitometry 2=5164
for extreme focal depth microscopy 4=29741
eyepiece graticule for X-ray diffr. patterns 0=8186
eyepiece graticules, dimensions 0=6918
flat field objective 1=4440
high-temp., metallurgical applications 3=18972
hypodermic fibre-optics microscope 4=29743
image measurement, image-splitting principle 0=14806
image-splitting, for accurate meas. 0=5148
infrared, spherical Luneberg lens 1=18566
interference microscope, AO-Baker type, applications 4=29742
interference, polarization based 2=22054
interference, without reference surfaces, lens systems 0=10752
interference, reflected-light 4=305
interference, transmitted-light 3=16752
MII-4 interference microscope for crystal surface examination 0=16828
interference type, new models 2=100
interference, for vertical illumination 2=9380
magnification, measurement 4=29739
measuring, photoelec. setting device 2=11484
micrometer attachment 0=19384
micrometer screw calibration, interferometric 3=21524
microscope-spectrophotometers, description 0=3595
objective and nosepiece threads, U.S.A. standards 1=1816
objective, transverse colour correction 2=19680
objective from two spherical mirrors, design data 1=18590
objectives, aberrations, interferometric meas. 2=9368
objectives, apertometer 1=11833
objectives, axial and off-axis aberr., meas. 0=6919
objectives, contrast transmission meas. 1=16067
objectives, wave aberration measurement 1=4439
optical double microscope 2=102
optical, for heavy particle tracks induced by 3 GeV proton interactions in minerals 4=30137
use in petrology 4=30923
phase-contrast, images of thick objects 0=16826
photoelectric, for luminescence study 4=7167
photoelectric scanning 3=16753
photometric attachment 4=14343
photomicrographic microscope for tissues 1=4449
polarization interference microscopes, review 4=29744
polarizing, diffraction images study 0=16827
polarizing, mag. domains obs. 3=24010
polarizing, objective with inclined optical axis 0=3613
polarizing, spindle stage for refractive indices det. 1=7855-6
polarizing, thermostat control unit 4=21345
precise-focusing, design 2=19686

Microscopes—contd
Ramsden eyepiece, lateral chromatic aberr. 2=13437
reflecting, in microspectrophotometer design 0=6929
reflecting objectives, with different central obstruction ratios 1=1810
reflection type, double-beam interference, for dry and immersion systems 4=14344
refractometer type 2=15724
review, recent developments, improved magnif. 1=2850
ring illumination, and its influence on resolving power 4=16216
scanning, for photoelectric data evaluation 2=1260
solid-image microscope 1=8220
"solid" image type 1=4450
stage, cooled thermoelectrically 3=14327
stage noise, in use for nuclear emulsion track obs. 4=16217
u.v. absorption microspectrograph 1=18598
u.v., constant deviation, illuminator 3=245
u.v. flying-spot microscope 1=8219
u.v., high-temp., × 150, for sintering process obs. 2=22006
ultrasonic phase contrast. 3=222
vertical, horiz. and inverted, for film camera 0=1031
Vickers projection, use in microphotometry 0=3594
X-ray, emission 2=13624
X-ray for microprojection 0=7331
X-ray, with 0.3 μ resolution 0=11138
X-ray shadow microscope, high resolution 2=22292
X-Y translation stage and indexing mechanism 2=9232
z-axis adjustment for precision meas. 0=12477
Zeiss binocular, in microdensitometer 0=10748

  andalusite, e.s.r. Fe^{3+} ion isomorphism 3=20855
  anhydrite ($CaSO_4$), crystal structure redetermination 3=25717
  anhydrite, thermoluminescence 1=20035
  anhydrite, thermoluminescent, emission centres 4=4291
  anorthite, phase transformations, 25° - 350°C 3=16019
  anthracite, e.s.r. line splitting, in inhomog. fields 1=14786
  aragonite, CO_3 ion bending vibration 3=25189
  aragonite, thermoluminescent, emission centres 4=4291
  asphaltene solutions, dynamic polarization 2=13353
  astrakhanite, crystal structure 0=14034
  australites, Th and U content by α-counting 3=7025
  azurite, mag. susceptibility 1=11457
  azurite, proton resonance, liq. H and He temp. range, antiferromag. state 1=1285
  azurite, proton resonance near Néel temp. 2=6711
  baddeleyite (ZrO_2), crystal structure 1=10261
  bafertisite $BaFe_2TiO[Si_2O_7](OH_2)_2$ crystal structure, atomic 4=7607
  baotite, crystal structure 1=15102
  barbosalite, crystal structure 0=3230
  barite, photoelastic dispersion meas. 0=6170
  basalt in EM7, Mohole project, magnetic props. 3=9137
  basalts, demagnetization by alternating mag. fields 1=4138
  basalts, from Victoria (Australia), magnetization stability 3=1495
  bentonites, dielec. props. 100 kc/s-4 Mc/s 2=18764
  beryl, elastic waves in half-space. 3=194
  beryl, optical props. and vibr. frequ. 3=10905
  beryllonite, $NaBePO_4$, crystal structure 3=13472
  beryls, Fe-coloured, absorption spectrum, 290° to 1.7°K 3=3001
  boracite, optical and dielec. props. 0=4377
  calcite, birefringence 2=12579
  calcite, deformation twins, etch figures 0=1897
  calcite, dislocation etch pits 0=16283
  calcite, etching studies 0=4602

Minerals—contd
calcite, i.r. absorption, rel. to dolomite and magnesite, theory 1=17896
calcite, neutron irrad., stimulated spin-echo meas. of cross-relaxation 1=7792
calcite, O_2 isotope fractionation with water 1=7901
calcite, thermoluminescent, emission centres 4=4291
calcite, twinned, crystal lattice distortion 0=11999
calcite, twinning dislocation movement 2=4364, 8769
calcite, twinning, X-ray and etching studies 0=13937
calcite, X-ray crystal analysis 4=23427-8
cancrinite, dielec., piezoelec. and elast. props. 0=634
cancrinite, elec. and elast. props., temp. depend. 0=11739
carbonates, O polarizability and point—dipole theory 4=30678
carboniferous sills, palaeomag. props. 1=12702
celsian, crystal structure 0=8225
chabazite, sorption rate of several gases 4=15830
chervetite, $Pb_2V_2O_7$, structure and props. 4=2075
chlorite, crystal structure, correction 3=8860
chlorite, structure analysis 0=6362
chlorites, theory of polymorphism 3=23370
chlorophacite, mag. props., effect of heating 3=1499
chondrites, carbonaceous, selected area electron diffraction 4=2107
in chondrites, phase composition 3=9186
chromite—olivine system, Fe Kα X-ray intensity rel. to Fe content 3=3421
chrysoberyl [Al_2BeO_4], e.s.r. 1=20205
chrysoberyl (Al_2BeO_4), e.s.r. 2=4252
chrysolite, lattice parameters 0=18365
clay type, swelling, X-ray diffr. study 2=8805
clay, X-ray phase analysis 3=13480
coesite (SiO_2), opt. absorption, 5-22 μ 2=4130
colemanite, dielec. switching and polarization reversal 0=1696
colemanite, ferroelec. bias 0=11743
colemanite, ferroelec. and pyroelec. props. 2=12564
complex ores, radiometric determination of uranium and thorium 0=18455
crednerite, crystal structure and composition 0=12050
cristobalite, $\alpha \rightleftharpoons \beta$ inversion study 0=4582
cristobalite, $\alpha \rightleftharpoons \beta$ transition, optical study 0=1878
cronstedtite, polymorphism 3=8854
crystallization theory, pressure soln. 0=10280
cubanite, polymorphic transition and mag. props. 3=11049
curite, $3PbO.8UO_3.5H_2O$, lattice structure 4=7615
danburite, i.r. spectra 1=8995
danburite, n.q.r. of Bi^{11}, coupling and atomic struct. 4=20628
datolite, crystal structure, direct det. 0=14030
detection, by e.m. wave absorption, diffraction effects 3=18489
diopside, $CaMgSi_2O_6$, melting curves rel. to pressure 3=9657
dolomite, i.r. absorption, rel. to calcite and magnesite, theory 1=17896
dolomite, thermoluminescence 1=5060
dolomite, thermoluminescent, emission centres 4=4291
Edingtonite, n.m.r., D in water of crystallization, double quanta 4=1903
elasticity, under various conditions 1=1501
enstatite chondrites, isotopic composition of Xe 1=4918
epistilbite, crystal struct., atomic, mordenite chain modification 4=23440
fayalite, elec. cond. at 35 kb 2=14511
fergusonite, natural and polymorph. mod., crystal structure 1=15107
ferrimagnetic mineral sands, purification 0=10326
fibrous salt, coloration meas. rel. to pressure and heating 2=23517
fluorescence anal., coupling of X-ray spectrometer to pulse-height analyser 4=13759
fluorite, coloration meas. rel. to pressure and heating 2=23517
fluorite, colour centres and radioactivity 3=8458
fluorite containing Gd^{3+}, paramagnetic resonance 1=14796
fluorite, dynamics of structure, i.r. props. 3=10939-40
fluorite, natural and synthetic, luminescence 3=15703
fluorite, X-ray diffuse scatt. and Compton effect 0=8195
fluorspar, luminescence 3=8616

Minerals—contd
fluorspar, plastic flow and fracture of cleavage faces 2=12874
fragment refractive index determ. by immersion method 4=27301
franklinite, magnon dispersion, by neutron scatt. 3=3127
gadolinite, crystal structure, direct det. 0=14030
γ-testing, effect of nonuniform distrib. 3=2397
garnets, spectra, optical and infrared 1=6208
geochemical prospecting, terminology and methods 2=15178
gersdorffite, mag. and elec. props. 4=7220
granite, dynamic press. meas. with resist. transducer 4=21225
granite, high-ampl. waves, attenuation 4=15717
granite and marble, high-ampl. waves, attenuation 4=15717
granite, u.s. attenuation 1=1786
graphite, cleavage in vacuum and gas environment 4=20674
gypsum, abrasive wear 1=4003
gypsum, dielec. anisotropy, 10 Gc/s 2=6515
gypsum hemihydrate, mechanical strength and induction period of structure formation 3=8790
haematite, crystal props. 0=4650
haematite, effect of added Ti on magnetic props. 0=21061
haematite—ilmenite solid solns., magnetization 3=3523
haematite, synthetic, remanent magnetization 1=6291
hambergite, $Be_2BO_3.OH$, structure and birefrigence 4=4598
hauerite, crystal props. 0=4650
hedleyite, structure and synthesis 3=3343
helenite, luminescence, rel. to Fe, Cu, Cr content 2=23612
herderite, crystal structure, direct det. 0=14030
heteropolar, distorted co-ordination polyhedra structure rel. to Pauling's rule 2=12919
heulandite, dielec. dispersion, freqs. < 500 c/s 3=8551
hollandite, crystal structure 0=6364
hopeite, morphology, natural rel. to synthetic 4=13513
howlith, i.r. spectra 1=8995
"hydrobiotites", crystal layer sequences 3=20858
hydrosodalite, unit cell and space group 3=23461
igneous rocks, demagnetization in altern. fields 1=21107
ilmenite—haematite solid solutions, mag. props. 1=20070
ilmenite—hematite solid solutions, synthetic, mag. self reversal 3=18576
ilmenite—haematite system, low temp., superparamagnetism 3=8655
iron ores, u.s. absorption, rel. to grain size 1=17405
jachimovite, $CuH_2(UO_2.SiO_4)_2.5H_2O$, crystal structure, atomic 4=7614
kainosite, unit cell and space group 3=13473
kaolinite, heat treatment, X-ray study 0=4666
kaolinite-type, double layer, polymorphism 3=13447
kettnerite, crystal structure 1=9139
klockmannite, crystal structure 0=10313
Kosolite, $PbO.UO_3.SiO_2.H_2O$, crystal structure atomic 4=7622
kyanite (Al_2SiO_5), presence of Cr^{3+}, maser appl. 1=11477
kyanite, luminescence relaxation spectrum 1=6233
Lawsonite, crystal false symmetry 1=11570
layer silicates, structure analysis 0=6362
lazulite, crystal structure 0=3230
leonite, structure 0=18363
lesserite, n.m.r. spectrum of B^{11} 2=14851
limespar, birefringence, revised data 4=26215
limestones, Tandur, Young and torsion moduli by u.s. 3=15973
linarite, crystal structure 0=12052
lomonosovite-murmanite group, crystal structure, atomic, chemical compositions, transition reactions 3=18325
lorandite, crystal structure 0=3236
lovozerite, structure, from electron-density pattern 1=4057
ludlamite, $Fe_3(PO_4)_2.4H_2O$, magnetic props. 4=15625
lunar surface constituents 0=18696
magnesite, i.r. absorption, rel. to calcite and dolomite, theory 1=17896
magnesite, thermoluminescent, emission centres 4=4291
magnetite, critical mag. scattering of neutrons 1=20117
magnetite, Fe composition rel. to mag. susceptibility magnitude 4=13778

Minerals—contd
magnetite, mag. transformation and domain structure 3=9138
magnetite, magnetization self reversal, −143° C 4=4380
magnetite, temp. hysteresis of magnetization 4=13193
marble, high-ampl. waves, attenuation 4=15717
margarite, cleavage in vacuum and gas environment 4=20674
margarite, crystal structure 0=3234
metahalloysite, bent crystals, electron diffr. study 2=14994
metatorbernite, crystal structure 0=8227
mica, etching of cleavages 3=807
microcline, coloration meas. rel. to pressure and heating 2=23517
microscope use in petrology 4=30923
mineralogy and paleomagnetism, suitable magnetometers 4=3082
molybdenite, cleavage in vacuum and gas environment 4=20674
monazite, surf. elec. cond. meas. rel. to humidity 2=21111
monazite, thorium-bearing, X-ray cryst. study 0=3242
moonstone, crystal unmixing, electron microscope obs. 3=20975
mordanite (Ptilolite), cryst. struct., atomic 4=26674
muscovite, absorption spectrum rel. to added KBr 3=10958
muscovite, cleavage in vacuum and gas environment 4=20674
muscovite, electron diffraction patterns, technique for prod. 4=15781
muscovite, i.r. spectra and its depend. on crystal orientation 4=15594
muscovite, structure, electron diffr. study 1=15104
narsarsukite, crystal structure 1=15103
natrolite, H_2O vibr. l. f., from neutron scatt. spectra 4=4565
natrolite, nuclear quadrupole resonance 2=8691
obsidian—H_2O, viscosity, 700°-900° C 4=11188
ore inclusions study by field establishment 3=2083
orthite, crystal structure, composition 1=15101
orthoclase, i.r. reflection spectrum 3=13014
palaeomagnetism, rel. to earth's radius 1=5132
paracelsian, crystal structure 1=15106
patronite, crystal struct., atomic 4=26677
perovskite ($CaTiO_3$), internal elec. field, calc. 2=3813
perovskite ferroelectrics, acoustic and X-ray excitation of anomalous layers 3=22993
perovskite-type (ABO_3) ferroelectrics electric field gradient 3=22992
perovskite of type A_2BTeO_6, crystal lattice struct. 4=26665
phenaksite, X-ray goniometric study 4=30852
phlogopite, cleavage in vacuum and gas environment 4=20674
pitch-blende, Pb^{207}/Pb^{206} eval. by mass spectr. 2=10998
pleochroism; colour change meas. rel. to orientation 3=922
prochlorite (natural silicate), use in X-ray spectrometers and monochromators 3=4230
pseudomalachite, crystal structure 3=3307
pyrite, crystal props. 0=4650
pyrites, triglyph, crystal distrib. of trace elements 4=30822
pyrochlore, surf. elec. cond. meas. rel. to humidity 2=21111
pyrolusite, dielec. hysteresis 0=11740
pyrophyllite, cleavage in vacuum and gas environments 4=20674
pyroxenes, elastic temp. 4=20682
pyroxenes, phase transformations, high-pressure 4=4509
pyrrhotite, anisotropy consts., below 205°K 3=15770
pyrrhotite, gyromagnetic ratio 1=11462
pyrrhotite, mag. props. at low temps 2=14809
pyrrhotite, magnetic anisotropy 0=21040
quartz dolerites, stress dependent magnetization 0=21041
quartz, shadows, due to gravity 4=13556
radioactive, U and Th determination by γ-spectrometry 1=7926
rathite III, crystal structure 1=4050
rathite, three forms, crystal structures 2=19080
red sandstone, superparamagnetism 1=21105
refractive index meas., polarization method 0=19379
rocks, absorption, acoustic waves, independance of frequency 4=9847

Minerals—contd
rocks, ang. dispersion due to random magnetization 4=23820
rock densities, in situ in Mohole, and gravity, vert. gradient 3=16187
rocks, elastic wave atten. processes 3=14234
rocks, elastic waves absorption meas. 3=3429
rocks, elastic waves, attenuation consts. 3=3428
rocks, elec. resist. to 40 000 kg/cm² and 400° temp. 4=22663
rock, impact crater formation 0=11990
rocks, long-term magnetic variations 1=1578
rocks, magnetic properties, effect of fire 1=1209
rock magnetism, anisotropy meas. 1=21106
rock magnetism, laboratory study of artificial specimens 1=6277
rocks, neutron slowing-down length for high H content 4=15069
rock, quartz-containing, phootoelec. effect 0=2928
rocks, thermal conductivity 1=20651
rocks, u.s. attenuation meas. 2=20924
rocksalt, mech. and thermal working, X-ray study 0=8213
ruby, absorption spectra 4=15596
ruby, electron—nuclear double res., h.f.s. 2=14842
ruby, electron transitions in far i.r. 4=1419
ruby, lattice parameters and density 0=12044, 14008
ruby, refractive index meas., temp. depend. 4=7092
rutile, band structure 1=928
rutile, bulk-cond. 3=10842
rutile diode, reduced, Schottky barrier layer model, expt. analysis 4=22746
rutile diodes, tunnel field emission 3=9846
rutile, elec. cond. and Hall coeff., var. with doping and temp. 4=30628
rutile, mag. susceptibility 0=18165
rutile, powders, adsorption rel. to surface polarity 2=2433
rutile, pulse currents of 100 μsec, ohmic cond. 3=13108
rutile, var. of elec. props. with doping 4=30627
salesite, $CuIO_3(OH)$, crystal structure 3=1338
sandstones, thermal conductivity 2=7435
sapphire, dissolution in ceramic systems, kinetics 4=18188
sapphire, effect of neutron irrad. on crystal cell size 1=3703
sapphire, lattice constants, precise values 2=15014
sapphire, phosphoresc. due to u.v., decay 2=16849
sapphire, synth., dimensional effects of irrad. 0=1895
sapphire, wear resistance on abrasion 1=14927
scheelites, luminescence intensity of Eu^{3+} and Tb^{3+} 2=21263
scorzalite, crystal structure 0=3230
separation, in ion stream due to α-rays 0=8457
separator, corona-discharge roll-type 2=24236
seyberite, crystal structure 0=3234
shale, cont. pyrrhotite, self-reversal of magnetization 2=24067
siderite ($FeCO_3$), Néel point 3=15749
spectrochem. anal., line intensity, composition depend. 2=19178
spectrochemical analysis technique 4=7798
spinel, elec. cond. at 35 kb 2=14511
spinel structure, dislocations, stacking faults and twins 1=17544
spinels, cation distrib. and i.r. spectrum 3=13184
spinels containing Mn^{3+} ions, crystal distortion 1=20556
spodumene, crystallization, from Raman spectra 3=5086
stishovite, equation of state 3=17666
stishovite (SiO_2), crystal structure 3=5108
stranskiite, structure and refractive index 1=4058
structure studies, by n. m. r. 4=10522
sulphides, Cd spectrochemical analysis 4=30913
talc, cleavage in vacuum and gas environment 4=20674
talc, dislocation grids, electron microscope study 1=3673
talc, dislocations, electron microscope examination 1=4985
talc, stacking fault energies, direct meas. 2=3927
teineite, crystal structure 2=15030
tektites, cometary origin 4=29260
tektites, cosmic-ray exposure history, rel. to origin 3=1515
tektites, origin from moon, appl. of re-entry research 1=1637
tektites, origin by O isotope studies 3=9014

Minerals—contd
thermal analysis, comprehensive, apparatus 3=8988
thermoremanent magnetization 1=6657
thorianite, heated, spontaneous fragmentation 0=4579
topaz (blue), surfaces of light absorption 2=4129
topaz, cleavages, etching 4=23315
tourmaline, crystal structure 2=15032
tourmaline, magnetism, various colours 1=17936
tourmaline, piezoelectric vibrations and eigenfrequency doublet splitting 2=2809, 7273
tourmaline, pyroelec., electron diffr. exam. 4=22461
tourmaline, pyroelec. polarization prod., on electron irrad. 4=12976
tourmaline, Z-cut, piezoelec. sensitivity to 7 kbar 4=22782
ullmannite, mag and elec. props. 4=7220
ultra-thin slices, electron microscopy 3=23533
uranium minerals, space group det. 3=11271
vaterite ($CaCO_3$), lattice consts., from X-ray and optical data 3=25727
vlasovite, crystal structure 3=13474
wehrlite, structure and synthesis 3=3343
whewellite, optical consts. and crystal structure 0=6169
whitlockite, in chondrites 2=21710
wurtzite, elastic properties, model 1=20300
wüstite, O/Fe ratio rel. to oxygen press. 3=5076
wüstite, phase transformation, second order from thermodynamics 4=26742
X-ray diffraction examination, review 4=13623
X-ray radiography and other X-ray methods, review 1=6659
xanthophyllite, crystal structure 0=3234
yoderite, crystal structure 2=17024
zeolite, n. m. r. of water 4=30481
zeolite, n.m.r. of water, calc. 3=11126
zeolite oil vapour trap 3=14226
zeolites, adsorbed mols. e.s.r. 4=23613
zeolites, elec. cond. of synthetic crystals 1=14394
zeolites, γ-ray effects, e.s.r. obs. 4=22657
zeolites, microwave and dipolar spectra 3=22984
zeolitic, water, spin—lattice relaxation time 3=21415
zeunerite and meta-zeunerite, crystal structure 1=9137
zinc blende, elastic properties, model 1=20300
zinc blende, using free-electron network model 3=12939
zircon grains, surf. elec. cond. meas. rel. to humidity 2=21111
zunyite, crystal structure 0=4651-2
$Cu_3PO_4(OH)_3$, cornetite, crystal structure, Monte Carlo calc. 4=30847
$Pb^{206,207}/U^{238,235}$ systems, diffusion 4=4079
PbS, anomalous, and diffusion of Pb from U 4=23710
Pt-bearing, occurence of Os and Os-Ir alloys 2=2397

spectroscopic, front faced Al, conversion factor anomalies 4=21299
spheres made to high degree of accuracy 1=21159
spherical objective, aberr., simple formulae 0=14798
spherical, use in shadow microscopy 2=13443
system to form reference angles 1=10472
systems, ray tracing formulae 1=2842
triple configuration, ray-tracing scheme 4=29728
testing, aspherical, by immersion to reverse spherical wavefronts 4=8400

Mirrors—contd
- 2-mirror system with 140° field 1=16069
- u.v., dielectric, high refr. index material 0=2237
- u.v., interferometric, design 0=16882
- variable-focal-length, using film stretched over drum 1=9471
- Al coated, ageing 0=21249
- Al, coated with de-tuned film, spectral range 0=16880
- Al, with oxidized SiO film, reflectance 1=10095
- Al, polarization elimination by discharge cleaning 0=178
- Al, u.v., reflectance-increasing coatings, theory 0=8797
- Al, LiF-coated, extreme u.v. reflectance 1=16070
- Al SiO coated, effect of u.v. irradiation on far u.v. reflectance 3=19004
- Al, with SiO protecting film, properties 0=8783
- Bi_2O_3—Au—Bi_2O_3 heat reflecting mirrors 1=4473
- Cr, optical props. in visible spectrum rel. to prep. 4=22853
- Ge and Se, cooled 2=19695
- Se, for i.r. polarization, prep. 3=24060

Moisture
- See also Atmosphere, humidity; Humidity; Permeability, mechanical.
- adsorption and desorption by hygroscopic fibres, convection 4=23597
- in air, content meas. 0=4779
- in air, freezing by large adiabatic expansions 0=5212
- in air, i.r. absorption 0=4200
- atmosphere, above desert, Sahara, total 3=18493-4
- content, direct-reading balances 1=21154
- detecting unit based on porous semicond. film 2=19182
- effect on CdS films, elec. cond. changes 4=22708
- effect on permittivity of Portland cement paste 2=10553
- evaporation, from capillaries of porous body, specific heat, thermodynamic calc. 4=11414
- gas, meas., when in two phases 3=7252
- in insulating liquids, rel. to elec. cond. 1=18421
- meas. by neutron probe 3=7076
- measurement, β-ray method 2=7088
- measurement devices 3=1573-4
- measurement, moving coal feed 2=7089
- meters, single electrode capacitors 0=8976
- moist medium, freezing 3=1868
- in soils, effects in thermal cond. meas. 0=5203
- trace estimation in halogenated oil, using tritium labelling 0=4766
- and ultrasonic velo. and absorpt., porous materials 4=5312
- in H_2 elec. discharge, effect on dissociation 0=3756

Molecular beams
- See also Particle velocity, analysis
- alkali bromides and iodides, mm-wave spectroscopy 2=18449
- alkali—iron—halogen complexes 1=6051
- alkali metals, mag. reson. gyromag. ratio meas. 4=30422
- apparatus calibration, use of constant-boiling systems 0=7072
- apparatus and electron-bombardment detector 1=2347
- apparatus for producing high intensity supersonic beam 4=12543

- detection statistics of freq. standard 4=6665
- detection and velocity meas. 2=12355
- detector using electron bombardment 1=7508
- detector using electron bombardment 4=1326
- detector, using electron bombardment ioniz. 3=6440
- detector, for metal beams 2=20886

Molecular beams—contd
- detector, W surface-ionization, reduction of K ion background 1=13135
- directivity, beam formed by channel gas flow 3=2679
- directivity patterns formation from long channels 3=25156
- e.m. wave amplification for steady state in cavity 2=20135
- and e. m. wave power meas., from focussing effects 4=5794
- elastic scattering, velocity dependence of cross-sections 1=4957
- electron scatt., low energy 3=15397
- flow through short ducts 2=5033
- formaldehyde and CHDO, beam spectroscopy 0=5921
- formation by gas expansion through apertures in diaphragms 0=2759
- formation by long parallel tubes 0=7825
- formation by multiple-aperture collimating systems 0=2758
- free flow; interaction between stream and body 2=5036
- free flow, matrix probability theory 2=5034
- free flow over non-convex surfaces 2=5037
- frequency standard, choice of molecule 3=12882
- graphite jet, velocity meas. by probe method 4=25787
- gun construction using ion beam 2=14342
- heavy neutral molecules from r.f. proton source 0=3810
- high intensity apparatus, supersonic stream gas source 3=8316
- high-speed selector 4=17326
- very high velocity neutral beam, production 1=19679
- intense jet production 1=9962
- intense, mechanism of formation 4=1324
- interacting with electrons, emission spectrum meas. 4=12474
- interactions, molecular, in beams from exhaust nozzles 4=12540
- intermolecular potentials invest., high-temp. 2=3793
- ionization, using plasma ion source 2=11614
- for isotope separation, using chopper 4=30400
- Knudsen conductance, rel. to specular reflection 2=5035
- low density, vector vel. distrib., meth. of study 2=3799
- magnetic resonance with large ang. momentum 4=22418
- magnetic resonances in successive oscillatory fields, calc. 0=17861
- maser, multiple-cavity, theory 4=24875
- maser, $1_{01}-0_{00}$ transition in CH_2O 4=3206
- maser oscillator, effect of density fluctuations 1=10791
- masers, with two resonators in series, theory and expt. 4=8968
- mass spectrometer, modulated, design and construction 4=19132
- mean free path of molecules 2=23019
- for measuring moments, rot., mag. 3=19974
- metastable state prod., by electron bombardment 3=4742
- methane and deuteroforms, mass spectra, metastable transitions 3=25148
- microwave interact, with matter, review 2=17952
- mixed energy state emission from two-cavity generator 2=16572
- mixed energy state emission from two-cavity generator 3=6442
- molecular gun for high speed and density beams 2=3801
- molecular mean free path 1=17384
- momentum, torsion balance meas. 0=7824
- multiple aperture slits 1=4958
- neutral beam detection 4=6667
- operational efficiency measurement 3=12884
- oscillatory free flow, effect of "recapture" 2=5038
- polarization and focusing, by dipole fields 1=886
- polarized, scatter analysis 4=25761
- polymerization, mass spectrometer obs., van de Waals force mechanism 4=6666
- prod., impulse operated nozzle 4=1327
- production using gaseous mixtures 4=15389
- production by Knudsen cell, ang. depend. 4=3937
- production, in long tubes, theory 1=7509
- radiation, resonance, spectroscope 2=16571
- radiation, resonance, spectroscope 3=6443
- rarefied gas dynamics, conference 2=1171
- rarefied gas dynamics, conference 3=11813
- resource letter on experiments 4=30488
- review and bibliography 4=20136
- review of development and major expts. 0=2757

Molecular beams—contd
  scattering, application in intermolecular mechanics 4=3935
  scattering, cross-section for Maxwellian velocity distrib. 2=6238
  scattering cross-section, reference 2=18502
  scattering cross-sections, approximation formulae 3=17619
  scattering data interpretation, validity of WKB approx. 3=8317-18
  scattering, differential elastic, phase-shift analysis 0=17860
  scattering, elastic, in thermal energy range 4=25579
  scattering expts., ang. distrib. 0=5866
  scattering, high-velocity cross-sections 3=8315
  scattering phase shifts calc. from differential cross-sections 4=3934
  scattering phase shifts, intermol. potentials calc. 4=3931
  scattering phase shifts, semiclassical equivalence relationship 2=10290
  scattering, review 4=25786
  scattering, small-angle, quantum effects 4=20135
  selector, mechanical, analytical calc. 3=15398
  sputtering, meas. in threshold region 2=3092
  study of collisions in gases at high temp. 1=11787
  supersonic, theory 2=3800
  teaching, demonstration apparatus 1=2673
  techniques for collision-free sampling systems 2=20889
  techniques for design of collision-free sampling systems 0=2758-9
  thermal accommodation coeffs. survey 2=5068
  velocity analyser for evaporating subst. 3=15399
  velocity selector 3=12883
  velocity selector, slotted disk, to 6000 m/sec. 2=20888
  velocity selector, slotted-disk type 0=15796
  very low intensity, meas., modulated beam technique 4=20137
  water, normal and deuterated isotopes, electronic excitation 4=1325
  wide-angle scattering, rainbow effect 3=6439
  A, detection and velocity meas. 2=12355
  Ar scattering on LiF cleavage plane 3=2680
  BaO, electric resonance spectrum 2=20796
  BaO, interaction with W incandescent surface 3=23541
  BaO, microwave spectrum by electric resonance technique 3=17570
  Be_2O_3, matrix isolation of high-temp. vapour 2=18501
  Bi, condensation on collodion, nucleation texture 1=15176
  Br_2, I_2, ICl, IBr, reactive scattering with K, Rb, Cs, crossed 4=28288
  Br_2, reaction with Cs atoms, crossed 4=28286
  CH*, angular momentum, by electron beam 1=8869
  CO_2, intense, production using nozzle 3=4790
  CO_2, ionization and acceleration 2=2032
  Cd, condensation, temp. effects 4=14458
  Cd, velocity distrib. of molecules from electron optical obs. 4=8229
  Cl_2, collision cross-sections with K atoms 0=5995
  Cl_2, collisions with K 2=532
  Cs, ionization, surface, by W plate 4=8670
  CsCl, total collision cross-sections in various gases 0=15795
  D_2, for nuclear fusion studies 0=20709
  D_2, scattering by Ni, polycrystalline 4=19996
  DF, mag. resonance, nuclear interactions 1=7492
  H condensed, mass-spectrometric study 4=3936
  H, use in plasma density measurements 4=8724
  H_2, clustered, prodn. 3=2678
  H_2, condensation at low temp. 1=8838
  H_2, mag. resonance, metastable electronic state established 0=20645
  H_2, reflection and dissociation on W 2=20876
  H_2, thermal scatt. by H and He gases 2=23017
  HBr and K crossed beams, reactive scattering, analysis 1=6064
  HBr, reaction cross-section with K atoms, energy depend. 0=6409
  HCl^{35}, mag. resonance, proton r.f. spectrum 1=19661
  HF, magnetic resonance study 1=2347
  H_2—Hg interacts., WKB approx. 2=8131
  HI, collisions with K 2=532
  H_2O and NH_3, total scattering cross-sections 2=23018
  He, clustered, prodn. 3=2678

Molecular beams—contd
  He, in high vacuum 2=10291
  He and H_2, stopping power of gaseous H_2 4=25778
  He scattering on LiF cleavage plane 3=2680
  Hg, intense jet prodn. 3=20034
  Hg, partial condensation, mass spectroscopic meas. 4=30489
  Hg_2, intense beam prodn. 4=1324
  K, adsorption on surfaces 2=21570
  K, reaction with HBr in crossed beams 3=6914
  K, scattering with Kr and HBr, rainbow effect 3=6439
  K + CH_3I, reactive collisions, theory 4=28290
  $K^{39}F$, elec. resonance, rotational spectrum 0=5914
  K—HCl, and K—HI, crossed beams, elastic and reactive scattering 4=28289
  Li^6F and Li^6Cl^{35}, vibr. consts. by molecular beam method 1=5996
  LiH, dipole moment det. 0=20691
  N, atoms, electron-impact ionization technique 2=22174
  N_2, attempted decomposition of ClO_2, N_2 dissoc. energy 0=2760
  N_2, clustered, prodn. 3=2678
  N_2, collision cross-section with K atoms 0=11499
  N_2 fast beam, apparatus, 5—1000 eV 1=17383
  N_2, high intensity apparatus 3=8316
  N_2, ionization of N_2 gas, cross-section 2=1390
  NH_3, directivity on flowing into vacuum 3=22615
  NH_3, focusing in masers 0=7826
  NH_3, maser operation 1=16554
  NH_3, radiation in compound energy state 2=16571
  NH_3, radiation in compound energy state 3=6443
  NH_4, sealed-off generator 2=18500
  NaCl, trajectories in elec. fields, state selection 0=7827
  from NaOH vapours, velocity analysis 1=2358
  O_2, scattering of electrons, 2.3-11.6 eV, atomic cross-sections 1=11079
  Sn, condensation on collodion, nucleation texture 1=15176
  Sn and Sn alloys 2=8127
  T_2, for nuclear fusion studies 0=20709
  TlF—atom, collision, rotational transition $(2, 0) \rightarrow (3, 0)$ excitation 4=25769
  TlF, scatt. by rare gases in definite quantum state 4=6664
  $Tl^{205}F^{19}$, Stark—Zeeman effect 1=12293
Molecular relaxation
  See Molecules, relaxation
Molecular weight
  atmosphere, 100-210 km, mass spectr. meas. 3=3481
  deoxyribonucleic acids, from light scatt., sedimentation and viscosity, comparison 0=7822
  liquids, rel. to thermal cond. and freezing pt. 0=5015
  molar boiling point elevation 1=11608
  mole, new definition 0=21263
  plasma, air 3=21818
  polymers, bulk, rel. to viscosity, theory 4=11187
  polymers, distrib. det. from viscoelasticity theory 1=14133
  polymers, distrib. from stress relaxation 4=7738
  polymers, effect of impurities on distrib. 1=12339
  polymers, in finite-conc. solutions 2=6242
  polymers, irrad., mol. wt. distrib. 3=8325
  polymers subjected to density-gradient centrifugation 3=8323
  polymers, viscoelasticity dependence 1=14134
  polymethylmethacrylate, dilute solns. 3=134
  polystyrene solns., effect on dynamic props. 4=27158
  polystyrene soln., radioluminesc. efficiency rel. to mol. wt. 4=27184
  polystyrenes, short chain, viscosity—mol. wt. dependence 4=25798
  vinyl polymers, irradiated 3=17626
  vinyl polymers, statistical molecular wt. distrib. 1=12340
  Bi vapour 3=9662
Molecular weight determination
  colloidal electrolytes, from sedimentation and diffusion data 3=6938-41
  by electrosedimentation 1=144
  macromolecules, from depolarization of dispersed light 0=940
  macromolecules, by sedimentation and ultra filtration 4=25789
  macromolecules in soln., by light scattering 4=6674
  with mag. supported ultracentrifuge 3=8942

Molecular weight determination—contd
- polymeric materials, from sedimentation equilib. in theta solvents 0=14141
- polymers, amorphous, by electron microscope 3=20039
- polymers, distribution det. by fractionation, theory 0=20702
- small volume by freezing pt. depression 1=10288
- from solution turbidity, correction 3=23882
- thermoelectric vapour osmometer 4=15831
- ultracentrifuge cell, sedimentation obs. 3=8979
- ultracentrifuge, magnetically suspended equilibrium 1=10289
- by ultracentrifuge, sedimentation equilibrium 2=4521

velocity distrib. functions, perturbation by chemical reaction 0=4708
vibrational polarization and polarizability, theory 0=5904
water in $CuSO_45H_2O$ 2=4430
wave funcns., use of distorted orbitals 1=17332
AN^+, AN_2^+, detection 0=12584
B—C and B—C—Si systems, mass spectra 4=17318
Br_2, electron diffraction, in gaseous state 2=22950
Br_2 oscillator, thermodynamic and partition functions 4=28177
Br_2, X-ray f-values and electron diffr. amplitudes 2=6218

Molecules—contd
- C_n, in vapour, props., M.O. calc. 0=509
- C_2, partition functions for abundance determination 1=2336
- CH_4, diamag. susceptibility 1=8870
- CH_3GeF_3, v.h.f. absorption 1=2323
- Co(ethylenediamine)$_3^{3+}$ ion, optical rotatory dispersion 3=730
- CsCl, ionization in adsorbed state 1=3019
- Cu_2, sputtered from Cu by Ar^+ 4=14769
- D_2, elec. charge, upper limits 3=10091
- D_2, ortho and para mixtures, prep. 0=1473
- D_2 oscillator, thermodynamic and partition functions 4=28177
- D_2, para—ortho conversion rate in solid 2=23041
- DNCS, molal thermodynamic props. 4=18246
- F_2, binding energy, calc. 0=7782
- F_2, mag. screening of F^{19}, calc. 2=20903
- H bond, review 4=22344
- H_2, binding energy, electron-nuclear coupling effects 1=14096
- H_2, charge, residual, search for 1=2307
- H_2, elec. charge, upper limits 3=10091
- H_2, electron drift velocity, 77-373°K 1=2300
- H_2, electron scatt., 33eV 4=25644
- H_2, Gaussian wave-functions, binding energy 0=15751
- H_2, ground state, correction energy terms 1=17325-6
- H_2, ground state, elec. and mag. props. calc. 0=508
- H_2, HD and D_2, mag. suscept., vibr. and centrifugal effects 4=28191
- H_2 in hydrogen photoionization 1=11907
- H_2, i.r. spectrum in liq. and solid, rel. to para conc. 0=4196-7
- H_2, interaction energy of charged particle, calc. 4=20043
- H_2, interaction rate with H atoms, H_3 activated complex 0=1514
- H_2, isotopic, reaction with isotopic H_2^+ 3=2677
- H_2, mag. susceptibility, effects of nuclear motion 2=10233
- H_2, non-adiabatic theory 4=15334
- H_2, nuclear mag. shielding, calc. 0=15757
- H_2, nuclear spin conservation in ortho—para conversion 1=3565
- H_2, o—p conversion, nuclear spin conservation, erratum 4=17280
- H_2, ortho—para conversion catalysts 2=9469
- H_2, ortho-para conversion rate, calc. 0=3293
- H_2, ortho-para separation by low-temp. adsorption 0=3329
- H_2 oscillator, thermodynamic and partition functions 4=28177
- H_2, proton electron capture in, molecular effects 0=5996
- H_2, Schrödinger wave eqn. solution 4=30433
- H_2^+, alignment by selective photodissociation 2=6229
- H_2^+, electron scattering, theory 4=9708
- H_2^+, energy values, calc. 0=7784-5
- H_4^+, H_5^+ detection in mass-spectrometer 4=9740
- HCN isotopic molecules, *l*-type doublet transitions 1=9930
- HF, diamagnetic suscept. calc. 3=8258
- HF, magnetic susceptibility 2=20807
- HNCS, molal thermodynamic props. 4=18246
- H_2O, quantum-mechanical study 0=7786
- H_2O_3, formation below −60° 4=10640
- H_2O_3, possible low-temp. existence 0=17848
- H_2S, neutron scatt., total cross-section 3=4733
- He—Ne molec. ion, existence 0=9813
- I_2, bond destruction by pressure 0=15767
- I_2 complexes with polynuclear aromatic hydrocarbons 0=11545
- IF_7, thermodyn. functions deriv. 2=12310
- N chain cpds. as intermediates in photolysis of solid HN_3 0=4727
- N_2, collisions with Hg, rel. to Hg reson. fluoresc. quenching 4=22304
- N_2, diamag. suscept. calc. 3=8259
- N_2, electron diffraction, in gaseous state 2=22950
- N_2, electron drift velocity, 77-373°K 1=2300
- N_4, formation and pink afterglow excitation 3=22486
- N_2 oscillator, thermodynamic and partition functions 4=28177
- N_2^+, Morse wave-function 0=15686
- N_3, in condensed products of elec. discharge 0=4419
- NH_3, diamag. susceptibility 1=8870
- NH_3, X-ray and electron diffraction 3=8220

Molecules—contd
- N_2—N_2 ionization collisions meas. 3=4015
- NO, atomic exchange study 0=13454
- NO, isotope effects on vapour pressure and thermodynamic props. 1=3581
- NO, oscillator strength of δ-bands 1=2334
- N_2O, photolysis in far ultraviolet 1=6575
- N_2O^+, radiative lifetime of $B^2\Sigma^+$ state 0=15754
- NeA^+, detection 0=12583
- O_2, electron attachment coeff. at low energy 3=362
- O_2, electron scattering, collision cross-sections, oscillator strengths 4=20057
- O_2, excited, electron impact ionization meas. 4=11537
- O_2, Schumann—Runge band, Franck—Condon factor 1=7454
- OH, in alkali metal-H_2 flames, concn. from spectral continuum 0=1517-18
- OH^-, spectrum and radius in solution 1=11128
- O_2—O_2 ionization collisions meas. 3=4015
- T_2, ortho—para conversion by adsorption 3=12789
- TlF, diamag. suscept. anisotropy 4=22369

electronic transfer and relaxation in solid media 3=10619
by electrons, 0-800eV 2=8138
energy conversion involving change of multiplicity 1=6058
energy transfer between unlike mols., effect of solvent viscosity 3=23887
energy transfer from excited and unstable ionized states 1=4920
energy transfer in fluorescent plastic solutions 1=6865
energy transfer in liquid and rigid organic scintillators 1=6864
energy transfer from triplet state 1=17376

Molecules—contd

excitation—contd

o-ethylaniline vapour, near u.v. absorpt. spectrum, rel. to states 4=17303
ethyl-d_3 radical, vibr., deactivation by D_2, He 4=22441
ethylene, electron impact spectra 4=6520
ethylene, Pariser–Parr theory, bandwidths and transition intensities 4=25703
ethylenic exciton trapping when coupled with nuclear vibr. 4=20127
exchange-reaction products, vibrational states 0=3295
exciton symposium, Colorado Springs (1962) 4=6513
ferrocene, rotational–torsional energy levels 4=25612
fluoresc. lifetimes and absorpt. intensity 4=17271
fluorescence polariz. in external elec. field 3=22528
fluorescence spectra, pressure dependence, rel. to pulse length 2=20786
o-fluoroasinole vapour, near u.v. absorpt. spectrum, rel. to states 4=17304
formaldehyde, electronic excit. and reorganization, theory 0=15710
formaldehyde, lifetime meas. of excited states 4=28197
formaldehyde, maser characteristics, meas. 4=764
formaldehyde, transitions 4=25705
by free-atom heterogeneous recombination on metal surface 3=8224
gases selectively excited in He afterglow meas. 4=12385
"hot" bands, effect of pressure modulation 2=2777
hydrazoic acid, photolysis, i.r. spectra of radicals 0=3320
hydrocarbons, aromatic, by electron impact, ionization–dissociation processes 0=3738
hydrocarbons, conjugated, nonalternant, oscillator strength calc. 4=20087
induced and spontaneous emission in a coherent field 0=17094
intermolecular energy exchange in collisions 3=6430
intermolecular resonant transfer, rel. to diffusion 4=6663
internal conversion rel. to energy surfaces 2=16504
internal energy mode in gases, excitation probability 2=15649
ion–mol. collisions, charge exchange 2=23013
in ionosphere, N_2, rot., and e. m. wave electron energy loss coeff. 4=30068
ionization, impact cross-section, classical calc. 4=2940
ketene, kinetics 2=6230
kinetics of dissociation processes 0=15683
lasers, chemically pumped, conversion of chemical energy to radiation 4=16683
lifetime, $10^{-5}-10^{-9}$ sec, meas., by modulated light 3=5514
light absorption and emission, weak perturbation 1=13913
by light scattering, Rayleigh 4=15316
linear chain, containing impurity, excited states 4=3939
from luminescence and absorpt. spectra 4=12493
luminescence, anti-Stokes yield, rel. to spectra 2=22941
luminescence, intensity, polarization and dipole moment, polarizability 4=192
luminescence, intensity and polarization, theory 4=9685
luminescence quenching by interaction 3=2609
luminescence, theory 3=10488
maser action by conversion of chemical to vibrational energy 1=8389
mesitylene, internal conversion, upper electronic—first excited singlet states 4=1286
metastable molecules, role in elec. breakdown of inert gases 0=5300
methane, polarizability, orbital calc. 4=3870
methane, by n scatt. 4=30464
methane, vibr.—rotational energy transfer 3=6414
methylamide, by thermal neutrons on liq. 3=2652
molecular crystals, organic, coherent stimulated emission 1=12489
molecule-ion charge exchange in mass-spectrometers 2=5390
by momentum transfer to an atom 2=6129
monoethyldiboranes, i.r. spectra 0=15732
multiple quantum transitions 1=17339
(n, γ) activation, failure to bond rupture and nuclear recoil 2=6130
$n \rightarrow \pi^*$ transitions, localized, delocalized models 2=16503

- **Molecules**—contd

H, H_2 intermolecular force fields 1=10541
$H-H_2$, H_2-H_2, interaction energies 0=15785
H_2-H, short-range interaction 0=4244
$H + H_2$, collinear collisions, exchange, classical mechanical calc. 4=6660
$H + H_2$ reaction, London pot. energy surface, empirical eqn. 4=20129
$H_2 + H$, rate of reaction, H_3 activated complex formation, calc. 0=1514
H_2-He, unlike molecular interactions 0=15786
HI–K collision processes 2=532
H_2-N_2, unlike molecular interactions 0=15786
HO_2^*, deactivation by H_2, O_2, CO_2 0=21272
H_2—Rb atom 3=4723
He, in bimodal model for shock waves 3=1755
He, intermolecular potential 1=8863
He–He interaction, consistent variation calc. 0=15677
He—He, potentials from neutral beam elastic scatt. 4=25777
Hg—N, transfer of energy from Hg 7^3S_1 level 4=12386
I_2 mol. crystals, from far i.r. spectrum 4=20445

Molecules—contd
intermolecular mechanics—contd
I_2 in I_2–He mixtures, transfer of vib. energy 2=16568
KCl crystal, potentials calc. 2=4417
$K + Cl_2$, diameter by crossed molecular beam method 0=5995
Kr, force parameters, calc. using exp 6-8 model 0=1515
Kr, intermolecular potential 0=14687
Kr, liquid, from kinemat. viscosity 3=9423
Kr, potl. function 1=7503
Kr^{85} with $H_2^{1,2,3}$, use of 12—6 and exp-6 potentials 4=24268
Li^{7+} ion bombardment, interference patterns 3=21901
LiH, magnetic interactions, orbital calc. 2=3770
N_2—e (thermal), cross-sections, by cyclotron resonance 3=22462
N_2 and CO, vibrational energy exchange 3=20031
N_2 metastable molecule collisions in weak discharge afterglows 4=24613
N_2, Morse potential force consts. from viscosity 4=9787
N_2, potl. function 1=7503
N_2, relaxation time, temp. depend. 3=8313
N_2, three-body coll. with CO, rel. to atomic ^2P state 2=14203
N_2^+, charge transfer cross-section with O atoms at low-energy 2=22173
$N_2-C_2H_4$, unlike molecular interactions 0=15786
N_2-CO_2 potential, use of Lennard–Jones 2=6235
NH_3, force parameters with He, Ne, Xe 2=19608
N_2-N_2 collisions, 10 → 01 transition calc. errors 4=22443
N_2-N_2 ionization cross-section 2=1390
N_2^{++}, N_2 single-charge-transfer reactions 4=8627
Ne, potl. function 1=7503
NO, atomic exchange 0=13454
NO, solid, e. s. energy calc. from quad.-quad. interaction 4=30494
NO_2 reaction with O^{18} 3=13598
N_2O, from temp. depend. of compressibility 2=15644
O_2, effect of H_2, D_2 and He on vibrational relaxation 1=8163
O_2, from intramol. oscill. relax., temp. var., from shock wave propag. 3=12881
O_2, liquid from kinemat. viscosity 3=9423
O_2, Morse potential force consts. from viscosity 4=9787
O_3 decomposition by O_2^* mols. 2=23954

OCS with N_2, collision broadening factor 0=5428
O_2-O_2, ground state interactions 0=4245
PH_3, K-type doubling 0=13440
$ROH + OH^- \rightarrow RO^- + H_2O$ in alcohols 4=13725
Ra, intermolecular force constants 0=17725
SO_2, dipole interaction with N_2 quadrupole 2=14340
SO_2, energy transfer, catalysis for different vibrations 1=19676
SO_2-CH_3Br and SO_2-SO_2 collisions 3=17621
SO_2-CO_2, linewidth of SO_2 3=12841
$SnBr_4$, Raman spectra in crystalline state 3=15696
$SnCl_4$, Raman spectra in crystalline state 3=15696
T, in CH_4-D_2 mixtures, n irrad., failure of elastic collision model 3=18460
$TiCl_4$, Raman spectra in crystalline state 3=15696
TiO_2, forces btn. particles 0=1874
TlF, rel. to vibr., rot. and isotopic effects 4=22369
Xe, force parameters, calc. using exp 6-8 model 0=1515
Xe, potl. function 1=7503
internal mechanics
$A_2B_2X_2$-type groups, analysis of n.m.r. spectra 1=3569
AXYZ type, force constants calc. 2=6133
absorption and emission probability calc. 2=14241
absorption intensity rel. to fluorescence lifetime 2=20782

acetaldehyde, internal motion rel. to J-coupling 3=737
acetic acid, monomeric and dimeric, Urey—Bradley force consts., normal coordinate analysis calc. 4=28244-5
adamantane, n.m.r. lines, second moments 1=17352
alcohols, aliphatic, intramolecular interaction 4=25692
aliphatic amines, rel. to ultrasound velocity 1=18409
alkali halides, new potential function 1=12272
alkali hydrides, potential energy curves 3=17569
alkyl radicals, disproportionation mechanism 2=23009
α_e and $\omega_e x_e$, evaluation from const. pot. energy functions 2=20766
amides, long-range proton interactions 2=16560
amines, flexibility and overall rotation 0=7735

tri-1-naphthylboron, intramolecular charge-transfer bands 1=19641
triarylborons, nonbanded atom—pi-electron resonance energy interaction 4=12511
triatomic homonuclear nonlinear, theory 4=3841
triatomic systems, 3-body theory, for restricted vibrations 1=4923
triazine, symmetrical, potential constants 4=1301
tyrosine, paramagnetic resonance and semiconductor theory 1=11115
united-atom model, for type XH_n molecules 0=6200
Urey—Bradley force consts., transferability 0=11514-5
Urey—Bradley force const. transferability, silyl halides 1=5990
Urey—Bradley force field, XY_3 mols. 2=22934
valence force fields, including intramol. tension 3=17551
vibration wave functions and Franck—Condon factors 4=15313
vinyl formate, proton—proton couplings 2=14242
wave-functions, calc., survey 0=9777
wave-functions, new approx. calc. method 3=2603
XY_2, bent symm., Coriolis coupling coeffts. 4=3840
XY_2 type, bent symmetrical, Urey—Bradley force field, thermodynamic props. 4=6526
XY_3, planar symm., Coriolis coupling coeffts. 4=3839
XY_3 pyramidal type, Urey—Bradley force field and thermodynamic props. 4=6527
XY_4, tetrahedral, Coriolis coupling coeffs., rel. to atomic masses 4=25616
XY_4 type lead halides, Urey—Bradley force field 4=6597
XY_4 type, potential const., group theory calc. 4=22339
XYZ_2 planar type, force constants calc. 2=6134
XYZ_2-type, pyramidal pot. consts. 2=10236
zero-point energies calc., perturbation methods 3=12795
zero-point energies calc. using Taylor's series 3=12794
A_2^+, binding energy, from A^+–A scatt. data 2=10237
$AlCl_3$, orbital valence force constants 2=20825
AlO, bond lengths in a → $X^2\Sigma^+$ transition 2=8122
AsH_3, AsD_3, potential energy 0=4187
AuBe, Mg, Ga, Si and Ge, from spectra, vibr. and rot. 4=22352
B trihalides, Coriolis coupling coeffts. calc. 4=3839
B trihalides, force consts. 4=28207
B_2H_6, valence force constants 2=14247
B_5H_9, molecular orbitals 3=12816
$B_{10}H_{16}$, molecular orbitals 3=12816
$B^{11}H_3CO$, $B^{11}D_3CO$, $B^{10}H_3CO$, and $B^{10}D_3CO$ 0=4240
BI_3, orbital valence force constants 2=20825
BO_3, orbital valence force constants 2=20825
B_2O_6, valence force constants 2=14247
BaO, transition electronic moment rel. to internuclear dist. 2=6192
BeO ground state, potential curve, MO approx. 4=20037
BiH^+, potential curves 2=18451
C_2, $B^3{}_{\pi g}$ state, perturbation calc. 2=22961
C_2, internal partition functions, at high temps. 0=5894
C_2, potential energy curves for 9 electron states 2=14299
C_3, potential const., vibrational, abnormality 4=25608
C_2, $x^1\Sigma_g^-$ and $b^1\Pi_u$ states 3=8251
CCl_4, force constants 0=5897

Molecules—contd

internal mechanics—contd

CCl_4. force constants 1=13987
CCl_4, force consts. from vibr. data 3=6376
CF_4, force consts. from vibr. data 3=6376
C^{13} and H^1 chemical shifts in CH_3X and CH_3CH_2X 1=12314
C^{13} and H^1 chemical shifts in substituted benzenes 1=12315
CH^*, angular momentum distribution by electron beam 1=8869
CH^+, potential curves 2=18451
CH radical, e.s.r. spectrum, calculation 1=11116
CH_4, rel. to proton spin-lattice relax. 2=10709
$CH_3CH_2CH_2$ Br, analysis of n.m.r. spectra 1=3569
$(CH_3CH_2CH_2)_2O$, analysis of n.m.r. spectra 1=3569
CH_2Cl_2, force constants, rel. to deuteration 2=12311
CHF_2Cl and isotopic species 2=3738

CH_3OH internal rotation 2=14269
$(CH_3)_n$Si Cl_{4-n}, n = 1-4, potential functions 1=9923
$(CH_3)_nSiCl_{4-n}$, n = 1 – 4, potential functions 1=11086
CI_4, from vibr. spectra 2=16541
ClF_3, force constant calc. 3=15344
CN, Franck—Condon factors to high vibr. quantum numbers 4=15329
CN, internal partition functions, at high temps. 0=5894
CO, internal partition functions, at high temps. 0=5894
CO^+, Morse potentials 3=4743
C_3O_2, potential const., vibrational, abnormality 4=25608
C_3O_2 survey 4=25668
C_3O_2, Urey–Bradley force field 2=20828
$COCl_2$, potl. energy const. 1=13986
COD_2, potl. energy const. 1=13986
COF_2, potl. energy const. 1=13986
COF_2, $COCl_2$, $COBr_2$, force constants 2=6134
COH_2, potl. energy const. 1=13986
$CSCl_2$, potl. energy const. 1=13986
CaO, transition electronic moment rel. to internuclear distance 2=6192
Cl_2, from vacuum u.v. reson. spectrum 2=22963
$[Co(C_5H_5)_2]^+$, field gradient at Co, Sternheimer correction 4=25708
DN_3, force constants 2=6133
DNO, resonance between pairs of levels 2=10257
D_2O, force field model 2=14243
Eu chelate and benzophenone, soln., Eu luminescence, by inter and intra mol. energy transfer 4=2694
EuR_3 (R is organic radical), for possible maser, optical 3=17072
Fe complex cpds, Mössbauer effect, rel. to bond covalency and inductive effects 4=9742
$Fe(C_5H_5)_2$, field gradient at Fe. Sternheimer correction 4=25708
Ge tetrachloride, force constants 0=589[illegible]
$GeCl_4$, force consts. from vibr. data 3=6376
$GeCl_4$, valence force fields calc. 3=17551
$GeDCl_4$, valence force fields calc. 3=17551
$GeHCl_3$, valence force fields calc. 3=17551
H, compressed molecular ion, use of theory of boundary perturbation 4=9707
H, Morse potential parameters, from gas props. 4=29665
H, para, conversion to MgO adsorbed equilibrium, below 20° K. endothermic 3=20994
H_2, binding energy, relativistic corrections 3=4746
H_2, electronic and mesic ions 1=14139
H_2, ground state potential consts. calc. 2=18453
H_2 and H_3, molecular energies, calc., Hellmann—Feynman theorem 1=823
H_2, HD, D_2, probab. for spontaneous fusion 0=1459
H_2, internal partition functions, at high temps. 0=5894
H_2, isotopically substituted, zero-point energy 3=12794
H_2, mag. props. from one-centre wavefunctions 3=17565
H_2, magnetic properties 2=14238
H_2, nuclear magnetic shielding 2=6221
H_2, ortho—ortho to ortho—para reorientation ratio from n.m.r. 4=9706
H_2, perturbation theory approach 3=2615
H_2, potential curve, MO calc. 4=20023
H_2, rotational-relax. freq., rel. to temp. 3=14212
H_2^+, force constants 3=10499
H_2^+, one two and three-centre wave functions 3=22541
$(H_2)^+$, relative partial wave theory 3=22517

Molecules—contd

internal mechanics—contd

H_2^+, 2nd order perturbation energy, united atom treatment 4=30434
HCO radical 0=5930
HF, breathing force consts., one-centre calc. 3=22564
HF and LiH, potential energy curves 0=17733
HN_3, force constants 2=6133
HNCO, force constants 2=6133
HNCO, Urey—Bradley force field, and thermodynamic props. 3=12799
HNCS, force constants 2=6133
HNCS, Urey—Bradley force field, and thermodynamic props. 3=12799
HO and HO^-, united atom model 0=5964
H_2O, breathing force consts., one-centre calc. 3=22564
H_2O, force constants 4=6596
H_2O, force field model 2=14243
H_2O, HDO, D_2O ortho—para conversion in solid Ar, Kr, Xe 4=1275
H_2O, united atom model 0=5964
H_2S, force const. determ. by isotopic mol. freqs. 2=18431
$H_2 + X = H + HX$ and $X_2 + H = X + HX$ reactions, (X = H, F, Cl, Br and I) 4=26738
H_2X (X=O, S, Se), force constants, comparison 3=8277
He, Morse parameters, different for equilib. and non-equilib. props. 4=9713
He—He repulsion, Hellmann—Feynman theorem 1=823
He_2^+, binding energy, new lower limit 3=723
He_2 $(^3\Sigma_u^+)$, potential curve, orbital calc. 4=1261
$He_2^+(^2\Sigma_u^+)$, potential curve, orbital calc. 4=1320
He_2, ion Σ_u state binding energy calc. 4=9712
He^4, three-body bound state, binding energy 3=25109
He—He, united-atom configuration-interaction 3=10508
HgBrI, force consts. 4=15348
HgClBr, force consts. 4=15348
HgI_4^{2-}, force consts. from Raman spectrum 3=6402
I_2, ground state pot. curve calc. 4=20050
IF_5, potential constants and thermodyn. props. 3=2630
IF_7, force constants and thermodyn, functions 2=12310
K_2, potential energies, rel. to dissoc. 4=15384
KHF_2 and KDF_2, potential function for stretching region 4=22468
$KNiF_3$, π-bonding, origin 2=20835
Kr, potential parameter 2=10288
Kr—Kr molecular interaction 1=17288
LaO, compared with ScO and Yo 2=10247
Li_2, potential energy curves calc. 4=3860
LiH, excited, true potential energy 2=10238
$M(XY)_6$, resonance interaction valence force field 2=10235
MgO, transition electronic moment rel. to internuclear dist. 2=6192
Mn_2, Heisenberg exchange interaction 4=25654
$(MnO_4)^{2-}$ 0=21070
$Mo(CO)_6$, force constants from vibr. spectrum 2=14245
N_2, afterglow mechanism 0=7758
N_2, compressed, spectrum, far i.r., rot., collision induced dipole moments 3=17580
N_2^+, D state, potential energy curve 4=3864
N_2, internal partition functions, at high temps. 0=5894
N_2, photoionization study 2=3730
N_2^{2+}, potential curves eval. 2=20816
N_2^+, potential energy curves from semiempirical valence bond method 4=22438
N_2^+, potential functions calc. 2=18430
ND_2CN, force consts. 3=22570
ND_3, Urey—Bradley force field, and thermodynamic props. 3=12799
NF_2H (difluoroamine), potential constants and thermodynamic functions 4=6591
NHDCN, force consts. 3=22570
NH_2CN, force consts. 3=22570
NH_3, atomic polarization meas. 3=3838
NH_3, breathing force consts., one-centre calc. 3=22564
NH_3, force constants, crystalline, gaseous, liquid 3=22566
NH_3, force consts. 2=19608
NH_3, harmonic force constants 3=2632
NH_3, ND_3, potential energy 0=4187
NH_3, Urey—Bradley, force field 3=12799

H_2, elec. polarizability tensor calc. 4=1256
H_2, HD and D_2, rotational mag. moments, vibr. and centrifugal effects 4=28191
H_2, polarizability, variational calc., rel. to elec. and mag. props. 0=508
H_2, quadrupole, calc., improved 4=20042
H_2, refractive index and polarizability determ., variation–perturbation method 4=25642
H_2, rotational mag., by molecular beam 3=19974
HBr, dipole moment derivative 4=12452
HCN, dipole 0=13441
HCl, electric dipole and quadrupole moments 4=25649
HD, dipole 0=4237-8
HD, dipole moment 1=17373
HF, dipole, calc. 0=1511
HF, electric dipole moment determ. from rot. mag. moment 4=30435
HF, elec. polarizability tensor calc. 4=1256
HF, rotational moment, electronic calc. 2=14239
HI, transition, from $\nu_{0\rightarrow 3}$ vibr.—rot. spectrum 4=28192
H_2O, electric dipole, sign, from Landé factors 3=22562
H_3O^+ ion, elec. moment, theory 1=19654
$HoIr_2$, orbital angular, neutron diffn. meas. 4=28829
$K^{39}F^{19}$, elec. and rotational mag. dipole 4=3867
Li_2, elec. polarizability tensor calc. 4=1256
LiD, rotational magnetic 3=15337
LiF, elec. polarizability tensor calc. 4=1256
LiF, isotope shift in rotational magnetic moment 2=18455
Li^6F^{19} 3=10510
LiH 0=5935, 20691
LiH, dipole, calc. 0=7787
LiH, dipole moment 1=7501
LiH, elec. polarizability tensor calc. 4=1256
LiH, rotational magnetic 3=15337
LiH, ${}^1\Sigma^+$ excited state 0=5976
$Li^{6,7}H$, dipole, and rotational magnetic 3=4752
MgO, transition electron moment rel. to internuclear dist. 2=6192
N-methyl methylenimine, elec. dipole moment 4=25710
N_2, electric dipole and quadrupole moments 4=22363
N_2, elec. polarizability tensor calc. 4=1256
N_2, quadrupole, from induced i.r. absorpt. 4=6573-4
N_2, quadrupole, from pressure-induced rotat. spectrum 4=9717
NF_3 1=6024
NF_3, dipole, and ionic character, calc. 1=14119
cis $-N_2F_2$ dipole moment 3=25111
N_2F_4, dipole 0=2752
NH_3 0=4203
NH_3, electric, radioelec. meas. 3=3838
NH_4^+, in crystals 0=6181
NO, electronic transition dipole moment, matrix element meas. 4=22365
NO_2, dipole moment from Stark effect meas. 4=9744
$N^{15}O_2^{16}$, dipole moment from Stark effect meas. 4=17294
$(NO_2)_2$ and NO_2, dipole, in var. solvents, and struct. 4=28222
NaF, elec. dipole, correction 4=22367
NaF, elec. dipole moment 3=22550
NaI, dipole polarizability, from spectrum 2=1991
O_2, rel. to anomalous Faraday effect 0=7772
O_2, dipole, induction, orbital calc. 2=20792
O_2, Schumann—Runge bands, electronic transition moments, determ. 4=9722
$O^{16}CO^{18}$, dipole moment 4=25624
OCS, quadrupole, from self-broadening of microwave spectrum 4=25678
OCS, rotational mag. resonance meas. 4=22418
OH radical, dipole moment from microwave Stark effect 1=7497
$O^{17,18}H$, dipole moments, h.f.s. 3=12828
PCl_3, dipole, and ionic character, calc. 1=14119
PF_3, dipole, and ionic character, calc. 1=14119
PH_3 0=4203
RbI, dipole polarizability, from spectrum 2=1991
$Rh_2(CO)_4Br_2$, dipole 2=10234
$Rh_2(CO)_4Cl_2$, dipole 2=10234
SF_4 2=6125
SO radical, elec. dipole 4=28203
SO_2 0=4203

Molecules—contd

$(SiH_3)_3N$, electric dipole, zero value and planar structure 4=6605
$TbIr_2$, orbital angular, neutron diffn. meas. 4=28829
TlF, polarizabilities w.r.t. intermol. axis 4=6664
TlF, rel. to vibr., rot. and isotopic effects 4=22369
$Tl^{205}F^{19}$, from molecular-beam Stark—Zeeman effect 1=12293
XeF_4, second moments 3=12868
$ZnCl_2$ amine complex, dipole mom. 3=15358
nuclear coupling
acetaldehyde, proton spin–spin coupling, –119° to 52°C 3=737
acetyl bromide, quadrupole coupling 0=20630
alkali halides, effect of vibration on coupling constants 1=2348
alkali halides, electric quadrupole coupling in free mols. 4=13339
aminotroponeimine chelates of Ni, nuclear and spin resonance 0=15762
analysis of complex n.m.r. spectra, iterative method 2=16553
aromatic free radicals 3=8309
aromatic free radicals, C^{13} coupling const. 3=15384
benzenes, polysubstituted, proton chem. shifts 4=1316
p-benzosemiquinone ion, e.s.r., C^{13} h.f.s. 2=3776
biphenyl$^-$ ions, of K, from e.s.r. h.f.s. 4=15378
borazole 0=7807
borazole derivatives, proton resonances 1=6046
boron mixed halides 0=17780
carbon groups, spin–spin coupling rel. to electronegativity 3=4783
carboxylate hydroxy methyl radical ion $(HO\dot{C}HCO_2^-)$ 1=2346
chem. shifts in n.m.r., temp. dependence 1=17354
chemical shifts of n.m.r., theory 3=15375
chemical shifts, from susceptibility data 1=877
chlorodifluoromethane 3=6411
chloromethylsilane 2=6151
cis-1-chloropropylene, Cl quadrupole coupling consts. 4=20079
cis-1, 2-dichloroethylene, quadrupole interaction 2=3741
cyclobutanes, proton spin-spin coupling consts., relative sign 3=8296
d^3 complexes, spin–orbit interaction 2=3814
DPPH 1=14829
DPPH (diphenylpicrylhydrazyl), proton reson. line splitting 1=14093
deuteron quadrupole coupling in diatomic "hydrides", calc. 2=6225
diatomic molecules, coupling consts., calc. 1=12304
diatomic molecules, force constants, calc. by perturbation method 0=13428
diatomic molecules, heteropolar, mag. shielding consts. 1=12318
diatomic molecules, higher-order spectroscopic parameters, empirical potl. func. 3=22524
diatomic molecules, spin—rotation and spin—spin 4=3826
2, 3-dibromopropionic acid, proton spin coupling constants 3=736
difluoramine 3=8274
dinitrobenzene anion radicals, e.s.r. splitting constants for each nucleus 3=4776
dinitrobenzene ions, isomeric 0=17778
1, 2-disubstituted propanes 4=28266
DPPH, coupling consts. of hydrazyl N atoms 0=4221
e.q.r. consts., effects of intramolecular elec. fields 3=2659
electron coupling of nuclear spins 0=17784
electron coupling of nuclear spins, relative signs of J^{HH} in (2, 2) metacyclophane 2=16563
π-electron radicals, polycrystalline resonance line shape 0=20664
epichlorohydrin, spin–spin coupling, from n.m.r. 1=19662
epoxides 0=11539
epoxides, substituted, spin—spin coupling rel. to electronegativity 4=28262
ethane, C^{13}—H and H—H nuclear spin coupling 1=17346
ethanes, substituted, proton–proton coupling const. in H–C–C′–H′ groups, temp. depend. 0=17784
ethyl acetylene 0=17783
ethyl alcohol, proton spin–spin coupling consts. 0=4226
ethyl bromide, quadrupole coupling const. tensor 3=17597

vibration, rotation—contd
polyatomic; bond distance and angular centrifugal distortion 3=2607
polyatomic, coords. in terms of atomic displacements 2=1982
polyatomic, fundamental-vibration resonance interaction 2=22937
polyatomic molecules, i.r. band intensities 0=20608
polyatomic molecules, rotational energy levels, statistical weights calc. 0=11521
polyatomic molecules, vibration—rotation energy, 3rd-order corrections 1=7458
polyatomic, potential functions 1=826
polyatomic, rot.-vibr. high-order energies 2=20778
polyatomic, rotational relaxation 4=5240
polyatomic, system, anharmonicity consts. interrel. 3=2599
polyatomic, tables 3=15323
polyatomic, tables of 2nd order trans. Hamiltonian coeff. 1=17304
polyatomic, third-order corrections 2=22933
polyatomic, vibr. bond elastic consts., rel. to pot. function 4=22333
polyatomic, vibration—rotation interaction coeffs., calc. 1=5991
polyatomic vibrations, anharmonic, by gas electron diffraction 2=22959
polydimethylsiloxane, rotation 2=14249
polyethylene, crystalline, low-frequency motions, study by neutron scattering 4=12551
polyethylene glycol, normal vibrations 3=6444
polyethylene, low-frequency motions 4=3952
polyethyleneterephthalate, rotational isomerism 4=6671
polyethylene, vib. 3=10556
polyglycine $(N^{14}\rightarrow N^{15})$, vibrational freq. shifts, isotope effects 4=28213
polyisobutylene, rotation 2=14249
polymer chains, extension 0=17857
polymer chains, internal rotations, interactions in adjacent monomers 0=9832
polymers chains, vibration, irreducible representation of line groups 1=13997
polymers, and electro-optical effects, calc. 4=1332
polymers, helical, normal vibrations 1=17380
polymers, vibrational effects in exciton motion 3=10561
polymers, vibrational spectra, theory 1=2318-19
polymethyl methacrylate, rotation 0=501
polyoxyethylene, normal vibrations 1=12279
polyoxymethylene, normal vibrations 3=10557
polypeptide chains, perturbation calc. 0=15789
polypropylene, isotactic and atactic, low-frequency motions, study by neutron scattering 4=12552
polypropylene, isotactic, vibrations 3=17624
polytetrafluoroethylene, vibrational spectra rel. to temp. and press. 4=20144
potential calc. by group theory 4=22335
potential energy consts., iterative method 2=20851
potential energy, derivatives, and Badger's formula 4=1242
potential interaction constants in terms of low-lying excited states 1=13998
propane, slow-neutron scatt. 2=3764
propargyl halides, force consts. and normal vibrations 4=25716
propionaldehyde, barrier to internal rotation 4=17308
n-propyl chloride, trans and gauche 3=25130
propyl fluoride, rotational isomerism 2=18473
propynal, 3820 $^1A'' \leftarrow {}^1A'$ transition 2=539
pyramidal hydrides and deuterides of C_{3v} symmetry, partial frequencies 1=2321
pyrazine, vibr. freqs. rel. to spectrum 4=22411
pyrene derivatives in frozen solns., vib. structure 2=18871
pyrene, vibrational assignments, 4000-400 cm^{-1} 3=25468
pyridine, and deuteroisomers, coordinates of planar vibrations 3=8293
pyridine and deuteropyridines, planar vibr., fundamental freq. calc. 4=9761
quantum mechanical tunnelling 0=17845
quantum theory of molecular excitation levels structure 1=9949
quantum theory of molecular excitation levels structure 1=11114

Molecules—contd
  vibration, rotation—contd
    quartic oscillator, energy levels and matrix elements 3=14030
    quasi-harmonic systems, vibrational behaviour, applic. to diatomic molec. 0=7746
    quasispherical molecules, in liquids, rotary mobility 3=21301
    Raman effects, higher-order coherent, theory 4=20006
    Raman overtones of intramol. vibr., intensities 3=10486
    Raman spectra analysis 3=17553
    Raman spectra, classical theory analysis 4=3832
    Raman spectra, intensity, temp. dependence variations 1=19642
    from Raman spectra line shape 3=19963
    reduced energy table for assymmetric top mols. 4=25615
    redundant coordinate, single, removal methods 4=12428
    redundant vibr. corrds., harmonic potential function 4=20010
    relaxation time determination 0=15692
    relaxation of vibrational excitation 2=3796, 8078
    Renner effect and spin-orbit coupling 0=20612
    reorientation by rotation about fixed axis 1=20250
    reorientation by rotation about fixed axis 2=8677
    resonance absorption 3=5031
    restricted rotation about single bonds, theory 2=6207
    rigid-body vibrations, non-centrosymmetrical mols., least-squares anal. 4=6523
    rigid rotator, scattering 0=20609
    rotating anharmonic triatomic molecule, dynamics 3=10489
    rotation consts., evaluation from const. pot. energy functions 2=20766
    rotation and deformation, quantum theory 2=11288, 13262
    rotation, hindered, in neutron scatt. 3=17284
    rotation–internal torsion levels of molecules with two equivalent methyl groups, calc. 0=15696
    rotation in liquids, n.m.r. study 3=14143
    rotation–rotation coupling by isotopic inertia axis shift 4=22332
    rotation spectrum in excited vibrational state 2=6141
    rotation, tables of matrix elements and Fourier coeffs. 1=19622
    rotational constants, digital computor calc., from structural parameters 1=7455
    rotational distortion consts. for axially symmetric ZX$_3$Y molecules 2=6143
    rotational energy levels of linear triatomic molecules in $^2\pi$ electronic state 2=3724
    rotational excit., by low-angle atomic scatt., sudden approx. 4=12541
    rotational levels of nearly degenerate pairs of vibronic states 3=10490
    rotational relaxation in rigid media by polarized photoselection 4=14167
    rotational spectra, with centrifugal distortion and torsional splitting, analysis tables 4=3834
    rotational spectra, hyperfine structure theory 2=12313
    rotational transitions in collisions, distorted-wave calc. 4=25766
    rotators, systematic, Wigner expansions 3=6381
    rotors, nearly symmetric, energy level. calc. 0=5905
    saturated ring ketones, carbonyl stretching vibrations 1=14009
    sec-butyl-d$_1$ radicals, vibrationally excited, collisional deactivation 0=17739
    sec-butyl radicals, collisional energy transfer in rare gases 3=12878
    sec-butyl radicals, collisional energy transfer with molecules 3=12879
    shock front structure for 9 gases 1=167
    shock waves, behind, excitation 2=21933
    shrinkage effect by thermal vibrations 2=6124
    silane, rotational distortion consts. 2=6143
    silyl acetylene, rotational consts. 3=25132
    silyl halides, potential constants and thermodynamic props. 3=8280
    simple molecules, spectra, NBS programme 3=9591
    simple polyatomic systems, vibration, unimolec. rate theory, anharmonic effects 4=20128
    slow-electron excitation 0=15694
    slow-neutron scatt. by rotators, theory 0=5780
    solids and liqs., rot. by cold neutron scatt. 4=30413
    spectra interpretation, energy levels determined 1=19619

Molecules—contd
  vibration, rotation—contd
    spectra, polyatomic, calc. 4=6524
    spectra, rot., torsional fine structure, perturbation sum values for analysis 4=6538
    spectra, rotational lines, random model application 3=17559
    spectral band intensities calc., simplification 2=6153
    spectroscopic anomalies rel. to Jahn–Teller effect 3=19957
    from spectrum, microwave, review 4=3827
    spherical rotational diffusion, rel. to light scattering in liquids 3=15329
    spherically symmetrical, energy calc. 0=11516
    spontaneous emission at absorption band wavelengths 1=12927
    Stark effect of asymmetric-top rotator 3=8231
    stilbene, in CCl$_4$, from spectrum 4=12510
    stretching frequencies of related molecules, average rule 2=6137
    strong field Stark effect 2=6136
    substituted benzaldehyde ions, rotational isomerism 3=15373
    succinonitrile, polycryst., n.m.r. meas. of transitions 4=1898
    succinonitrile, rotation in crystal lattice 0=4385
    sulphuryl chloride, rot. spectrum meas. 4=20071
    sum rules, accuracy estimation criterion 4=6534
    sum rules for rot. levels, planar asymmetric mols. 4=9689
    symmetric and asymmetric-top molecules, P–R maxima separations in unresolved parallel bands 4=6529
    symmetric molecules, type AB . . . XYZ$_3$, rotation line intensities 0=15689
    symmetric top mols., internal rot. and Coriolis coupling 4=28167
    symmetric top molecules 0=4194
    symmetric-top molecules, classification of rotational levels 2=22935
    symmetric-top molecules in electronically degenerate states 2=3725
    symmetric top molecules, rotational consts., difference for upper and lower states, from i.r. intensities 0=13430
    symmetric top, rotational const., from i.r. and Raman data 1=7456
    symmetric top, rovibronic transitions, selection rules 4=20009
    symmetric top, vibration-rotation band profiles, calc. 1=14025
    symmetric tops (XYZ$_3$), centrifugal stretching 2=8089
    symmetry coordinates, general theory 4=6537
    symmetry of normal modes 0=20605
    syndiotactic vinyl polymer, rotation potential calc. 4=30491
    temperature effect on electron diffraction patterns 3=17549
    tertiary butyl chloride 3=12849
    tetradeuteromethane, rotational relaxation 4=24271
    tetrahedral ions; Urey–Bradley and orbital valency force field application 2=3722
    tetrahedral, vib. spectra, use of frequency versus at. no. curves 1=14001
    tetrahedral XY$_4$ model, vibrational mean-square amplitude matrices 0=17729
    tetrahedral XY$_4$ spherical top molec., vibr.-rot. perturbations 1=6001
    tetrahedral XY$_4$ systems, mean-square amplitudes calc. 1=7459
    s-tetrazine, vibr. freqs. rel. to spectrum 4=22411
    s-tetrazine, vibronic band systems 2=1987
    thermodynamic functions for P$_4$, harmonic oscillator 4=1241
    thiocyanates, inorg. complexes 2=18818-19
    thiophosphoryl halides, potential consts. 3=2634
    tolane, oscillator strengths from i.r. dispersion data 4=4282
    toluene, rotational barriers 3=8286
    toluene, vibration and rotation 2=15822
    toluidine, rotational mobility, temp. depend. 4=25700
    torsional vibrations in CH$_3$-X type molecules 3=19959
    trans-crotononitrile 0=13438
    trans-1-chloropropylene, internal rotation barrier 3=2642
    trans-1-chloropropylene, quadrupole coupling consts. 3=2642

Molecules—contd
  vibration, rotation—contd
    trans- 1,2-dichloroethane, effect of hindered rotation on n.q.r. 4=26457
    transition-metal complexes —— optical rotatory dispersion 1=5992
    transition probabilities, recurrence formulae 2=6193
    translat.-vibr. energy transfer, diatomic mols. in shock wzves 0=6832
    trapped molecules, rotation in inert-gas lattices 4=3837
    triatomic, bent, vibrational levels, higher, due to bending 4=28168
    triatomic homonuclear nonlinear, theory 4=3841
    triatomic mol. in $^3\pi$ state energy levels 2=12319
    triatomic molecules, vibr. energy redistrib. in Fermi resonance 3=15330
    triatomic, rotational spectra, theory 2=16509
    s-triazine, vibr. freqs. rel. to spectrum 4=22411
    tribromoethylene-d 0=17753
    1,2,4-trichlorobenzene 1=14035
    trifluoromethanethiol (CF_3SH), fundamental freq. assignment 0=4205
    trimethyl silane, rotation 0=17744
    trimethylene oxide 0=17755
    trimethylene oxide, double minimum vibration 0=17756
    trimethylene oxide, double minimum vibration 1=2322
    trimethylene oxide, vibration-rotation interaction 1=7500
    true vibrational wavefunctions, effect of vibration—rotation interaction 3=10492
    tunnelling processes 0=5907
    two-atom vibrations, mean-square amplitudes 2=1980
    two-axis, dielectric saturation theory 2=3797
    two-top molecules, over-all rotation 1=5995
    with 2 benzol rings, liquids, rotational mobility and rigidity 4=25694
    urea, temp. vibrations 2=10249
    Urey-Bradley force field, adaptation to NH_3, PH_3, SbH_3 and AsH_3 3=22552
    Urey—Bradley force field for pyramidal XYZ_2 molecules 3=2626
    Urey-Bradley force field, XY_3 mols 2=22934
    vibr.-rot. interaction, in electronic transitions 0=15695
    vibration amplitude and frequency calc. applied to crystals 1=11148
    vibration amplitude studies, review 1=11092
    vibration effect on diffraction of electrons 2=1981
    vibration, effect on electronic states, calc. 2=12341
    vibration, effect on h.f.s. const. 2=6144
    vibration, effect on molec. electron distrib. 2=14292
    vibration—electronic absorption, discrete, rel. to Raman scattering 4=20008
    vibration, rel. to excited state electron structure 2=14298
    vibration frequencies, free rotation effect 1=14003
    vibration frequencies in transition state 2=855
    vibration potentials, power series expansions, classical potentials for ionic molecules 1=5994
    vibration potentials, power series expansions, Hietler—London potential for H_2 1=5993
    vibration-rotation bands, pressure broadening studies 0=9795-6
    vibration—rotation interact., general form 3=2596
    vibration—rotation levels of molecule with axial symmetry 0=7742
    vibration states equil., rel. to luminescence spectra 2=22943
    vibration theory, interaction and kinematic coeffs. 4=30414
    vibrational angular momentum, rel. to force constants 4=20016
    vibrational collision lifetimes, temp. depend., theory 0=15787
    vibrational constant evaluation from potential energy functions 1=8830
    vibrational consts., machine calc. 0=20610
    vibrational density approx. rel. to harmonic oscillator exact sums 2=10241
    vibrational effects on bond lengths and angles 3=15328
    vibrational effects on nuclear spins in CHX groups 2=8086
    vibrational energy exchange 3=2546
    vibrational energy gain rel. to Hg reson. fluoresc. quenching 4=22304
    vibrational energy-level sums, calc. method 3=17556
    vibrational energy transfer between fluorescing molecules 2=20787
    vibrational energy transfer in collisions, catalysis by H_2O and D_2O 2=23015
    vibrational energy transfer in collisions having large transition probabilities 3=17620
    vibrational energy transfer in colls with large transition probabilities 4=25768
    vibrational energy transfer, effects of anharmonicity 4=9788
    vibrational excitation in collisions 0=19207
    vibrational excitation, impact parameter treatment 4=30411
    vibrational excitation, by slow electron impact 4=25613
    vibrational force-const. problem, multiplicity of soln. 4=28165
    vibrational frequencies, calculation, Average Rule and Complete Isotopic Rule 1=13996
    vibrational level inverted population quenching by collisional excitation transfer 4=27682
    vibrational level transitions during collisions 4=22440
    vibrational potential functions 0=7743
    vibrational potential functions, MO calc. 2=20775
    vibrational polarization, additivy 1=12277
    vibrational polarization of gases 0=5904
    vibrational polarization in liquids 1=11754
    vibrational polarization, temp. dependence 1=12276
    vibrational polarization terms 1=12275
    vibrational relax., coupling to translation 3=8236
    vibrational relaxation, non-adiabatic, in atom—molecular collisions 4=12404
    vibrational relaxation, systematics 4=6661
    vibrational relaxation, u.s. study 0=9789
    vibrational—rotational bands, transition probabs. calc. 3=23628
    vibrational-rotational energy levels, sum rules for asymmetric rotor 2=18435
    vibrational and rotational transitions in molecular collisions 4=25767
    vibrational spectra of spin-degenerate molecules, Jahn—Teller effect 3=717
    vibrational transition in molecular colls. 2=6148
    vibrational transistion in molecular collisions 1=14002
    vibrational transition probabs, calc. 3=12803
    vibrational wave-function calc. for diatomic molecules 2=18433
    vibrations, coupled anharmonic rel. to spectral line broadening 2=12306
    vibrations, theory, use of Polo's ρ vectors 4=1240
    vibronic eqn., resonance interaction betwecn electron states 4=12427
    vibronic interactions, symmetry ares, effect of number 4=25607
    vinyl acetylene, rotational consts. 4=9762
    vinyl bromides, rotation spectra, structure 4=6638
    vinyl chloride and vinyl chloride-d_3 0=2764
    vinyl fluoride, rotational const. 1=8833
    vinyl fluoride, wagging modes 0=7762
    vinvl silane, internal barrier 1=6008
    vinylidene halides, Urey-Bradley force consts. 0=15684
    virtual symmetry concept 4=22471
    viscous solns. of complex organic cpds., optical absorption 3=23881
    w.k.b., for calc. Franck—Condon factors and r-centroids 3=15324
    water, rotational eigenfunctions, asymmetric rotator in quantum mechanics 0=9783
    water, slow neutron scatt., small-energy rotation transitions 3=23869
    water, rel. to slow neutron scattering 1=19625
    water vapour, rotation line widths and strengths 4=9750
    water vapour, transmission functions for pure rotation band 1=831
    wave-functions and intensity calc. for rotating anharmonic oscillator 1=13991
    very weak transitions in crystal spectra 1=14593
    Wilson GF and Mean—Polo C matrices 3=10485
    XO_4 ions of groups V, VI and VII., mean amplitudes of vibration 4=12487
    XY_2, bent symm., Coriolis coupling coeffts. 4=3840
    XY_6 molecules, normal coord. analysis 3=2631
    XY_3 molecules, planar, substituted, vibrational analysis 4=22372
    XY_3, planar symm., Coriolis coupling coeffts. 4=3839

Molecules—contd

vibration, rotation—contd

- XY_4 planar symmetrical molecule, mean amplitudes of vibr. 4=15318
- XY_4 type ions, mean ampl. of vibr. 4=15358
- XY_4 type ions, Urey—Bradley force field 4=3842
- XY_3-type pyramidal, bond distance and angular centrifugal distortion 3=2607
- XY_3-type (X = N, P, As, Sb; Y = H, D, T), mean vibr. amplitudes 1=14000
- XY_3–UW_3 and $WZXY_3$ molecules, G matrices for E class vibrations 0=5908
- $X(YZ)_4$, force const., π interaction potl. 0=17766
- XYZ_2 (X = N, P, As; Y, Z = H, D, T), rotational distortion const., harmonic wave-numbers 1=6000
- XYZ_2 molecules, Urey—Bradley force field 3=2626
- xylene, ortho-, para-, meta-, neutron scatt. meas. 4=28251
- Al_2, 5650-6600 A. bands, rotational analysis 4=9699
- AlAu, rotational analysis of spectra 3=10505
- $AlCl_4$, mean ampl. of vibr. 4=15358
- AlD, rotational constants 2=10262
- AlO, Franck–Condon factors, calc. 2=16521
- Al_2O 4=25666
- Al_2O, mean vibr. amplitudes, calc. 4=25665
- $AgClO_3$, liq. 2=14275
- $AgClO_4.3C_4H_8O_2$, dioxane, from p.m.r., -66 to +25°C 4=1900
- AgH, vibr.–rot. interact. and electronic spectrum 2=20820
- AsH_3 and AsD_3, rotational distortion consts. 0=4187
- As halides, calc., XY_3 pyramidal 4=9734
- $AsCl_4$, mean ampl. of vibr. 4=15358
- $AsCl_3$, thermal vibrs. 2=8083
- AsD_3 and AsH_3, energy transfer shown by relax. 4=17289
- AsH_3, Urey-Bradley force field 3=22552
- AsO, rotation analysis of band system 2=18450
- AsO^+, $A^1\Sigma^+$–$X^1\Sigma^+$ system, rotational analysis 2=14250
- AsO, AsO^+, vibrational analyses of u.v. band spectra 1=14051
- AsT_3, wave numbers and rotational distortion constants 0=17741
- AuBa, AuCa, AuSr 3=19979
- AuBe, Mg, Ga, Si and Ge, spectra 4=22352
- $AuBr_4^-$, mean amplitudes of vibr. from Raman freqs. 4=15318
- $AuCl_4^-$, mean amplitudes of vibr. from Raman freqs. 4=15318
- AuH and AuD 4=30431
- BCl_3, force constants 0=17723
- BCl_3—$HBCl_2$—$DBCl_2$, vibrational analysis 4=22372
- B_2D_6, anharmonicity factor calc. 2=14247
- BF_3 + dimethyl and diethyl ether addition compounds, valency 4=25695
- BH, BD, constants meas. 4=25636
- B_2H_6, anharmonicity factor calc. 2=14247
- BO, rotational analysis of $B^{10,11}O$ 1=4938
- BO, rotational analysis of u.v. bands 1=2329
- BO_2, calc. 4=28233
- BO_3^{3-}, force constants 0=17723
- B_2O_3 3=8272
- B_2O_3 and B_2O_2 0=4193
- B_2O_3, rigid rotator harmonic oscillator model 4=6584
- $B(OD)_3$, in-plane vibrs., force consts. and freqs., calc. 3=22555
- $B(OH)_3$, in-plane vibrs., force consts. and freqs., calc. 3=22555
- $B(OH)_3$, potential function 0=4180
- B_2S_3, rigid rotator harmonic oscillator model 4=6584
- $B_2{}^{10,11}O_3$, vibr. spectrum calc. 2=10243
- BaO, $A^1\Sigma$—$X^1\Sigma$ system, in C arc, vibr. temp. 4=22347
- BaO, Franck–Condon factors of band system 4=25660
- BaO, rotational consts. 3=17570
- BeC_2, mean ampl. of vibr., meas. and calc. 4=15348
- BeH_2, mean ampl. of vibr., calc. 4=17291
- BeO, vibrational temperature in carbon arc 1=13989
- BeO, ($B'\Sigma \rightarrow X^1\Sigma$) system, r-centroids 0=20601
- $Ba(OH)_2.8H_2O$, OH bond orientation 3=4968
- $BaTiO_3$, from i.r. spectra 3=23064
- BeO, ($B^1\Sigma^+$-$X^1\Sigma^+$) system, transition probabs. 3=8249
- BeS. $B^1\Sigma^+$—$X^1\Sigma^+$, rotational analysis 4=6558
- BiBr, emission spectrum, A → X system analysis 3=6389
- BiCl, rotational structure 1=7475
- BiCl, vibrational analysis of visible emission 1=14039

Molecules—contd

TiO, vibrational parameters 2=14253
TiO, $B^2\pi — d^1\Sigma$ transition, rotational analysis 2=22975
TiO_2, calc. 4=28233
Tl tetrahalides, mean ampl. of vibr. 4=15358
$Tl^{205}F^{19}$, from molecular-beam Stark—Zeeman effect 1=12293
TlH, rotational consts. 3=8270
TlI, vibration frequency 0=9801
$TlNO_3$, vibr. analysis of Raman data 4=181
U—O bond, force const., in UO_2^{2+}, from $K_3UO_2F_5$ spectrum, i.r. 3=22575
VO, Franck—Condon factor for $^2\Delta$-$^2\Delta$ system 3=22551
VO, Franck—Condon factors, calc. 2=16521
VO, Franck—Condon factors, r-centroids, $^2\Delta$ - $^2\Delta$ system 4=9730
VO, $^2\Delta — ^2\Delta$ transition probabilities 2=14254
$VOCl_3$, potential constants 0=5900
Va—O compounds, from spectrum, i.r. absorpt., and structure 3=22574
WBr_6, mean vibr. amplitude 4=17292
WCl_6, mean vibr. amplitude 4=17292
WO_2 , mean vibr. amplitudes, calc. 4=25665
XH_3 type, relation between symmetric and antisymmetric frequencies 3=17558
XeF_4, mean ampl. of vibr. 4=25688
XeN, 4925 A band system, rotational structure 2=6168
Y oxide, 0, 0 bands, rotational consts. 0=1497
YO, Franck—Condon factors of band system 4=25660
YO, rotational analysis of blue-green and orange systems 1=19634
$ZnBr_2$, bending vibrations and ionic model 2=14255
$ZnBr_2$—nitrile complex, CN stretching frequency 2=14320
$Zn(CH_3)_2$, rotational const. 1=844
$ZnCl_2$, bending vibrations and ionic model 2=14255
ZnD, rotational constants 2=20824
ZnF_4, vibration amplitudes and force consts. 4=28232
ZnH, rotational constants 2=20824
ZnI_2—nitrile complex, CN stretching frequency 2=14320
ZrO_2, calc. 4=28233
ZrO, $\gamma(C \rightarrow X)$ system, rotational constants 2=14256

Molecules, mesic
  (Heading introduced in 1961)
  $(dd\mu)^+$, in μ^- catalysis of d + d fusion reactions 4=25205
  $(d\mu p)^+$ and $(d\mu d)^+$, formation and decay in liq. H_2 and D_2 4=3953
  hydrides, μ-mesic, paramagnetism 1=5988
  in hydrogen, liquid, $p\mu p$ and $p\mu d$ systems 2=18504
  μ-mesic, catalysis of D fusion in cold gas 1=8751
  μ-, formation and decay in liq. H 4=6675
  μ-mesic, formation in H–D mixtures 0=13460
  μ-mesic, nuclear fusion and vibr., calc. 3=12888
  μ-mesic, three-body, analytic approx. 3=10484
  μ-mesic, theory 0=13458-9
  μ^--mesonic, formation rates in liq. H_2, direct meas. 3=4795
  μ^-, formation in liquid H, capture from Ne nucleus 4=28296
  μ^+, formation conditions 3=25160
  $(p\mu p)^+$, ortho L = 1, μ^- capture rate, $s = \frac{1}{2}$ state probability 4=22445
  $(p\mu p)^+$, ortho state, formation rate and stability meas. 4=6090
  $[p\mu p]$ states, rel. to radiative capture rate 4=16925
  $pp\mu$ system, binding energy, various parameters 1=4959
  three-charge problem, Born–Oppenheimer method 2=16577
  D_2 HD, and catalysis of $d + d \rightarrow He^3 + p$ and $p + d \rightarrow He^3$ reactions 4=20001
  H_2, formation from mesic atom + H atom 4=20001
  H_2, μ-mesic ion, props., calc. 0=11492
  H_2, μ^--mesic processes 0=7828
  H_2, radiative capture of μ^- 4=3824
  H_2, structure of ions 1=14139
  HD, μ-mesic, bound states 1=14140

Molybdenum
  abrasion, theory 0=3164
  abrasion wear and friction 1=1353
  absorption, acoustic, peaks at var. temps. and dislocation relax. 4=15417
  adsorption of Au, 2×10^{-9} torr 3=5149
  adsorption of CO and N, by films 10^{-6}—10^{-8} mm, −195- +22°C 3=16146
  adsorption of Cs ion, linear var. of adsorption energy with work function of Mo 4=29196
  adsorption and desorption of Au, radiotracer meas. 4=2130
  adsorption—desorption of H_2 4=23608
  antiferromagnetism, absence, by neutron diffraction study 3=3141
  arc, electric in Ar, plasma flame jet, temp. meas. 3=16921
  arc initiation 2=17804
  arc initiation 3=9756
  arc stability 1=1899
  atomic and electronic heat, 10-273°K 0=1561
  atomic spectrum, isotope shifts 1=2292
  atoms, repulsion of energy levels 1=12237
  b.c.c., dislocation uncertainty 3=20174
  band structure from X-ray spectra 3=4979
  bombard. with Cs^+ and Rb^+, ang. distrib. of scattered secondary ions 4=8856
  bombarded by argon atoms and ions electron emission 2=13591, 17876
  bombarded with Na^+, K^+, Rb^+, Cs^+, backscatter rel. to temp. 4=8854
  bremsstrahlung-isochromats, X-ray spectrum short-wave limit structure 1=6216
  brittle cracks, nucleation on twin and grain boundaries 3=6803
  brittle fracture, transition temp. rel. to grain size 1=11506
  brittleness, cold, for different surface finishes 0=6317
  cathode in A glow discharge, cathode drop and work function 2=19919
  cathodes, in glow tubes, characteristics 3=4054
  cathodes, vapour deposited, thermionic emission 4=16520
  chemisorption of N_2 4=13694
  chemisorption of N_2 electron microscope study, calc. 4=29195
  cold cathodes, influence of rolling texture 0=7150
  cold-rolled and recryst. textures 4=2110
  cold worked, dislocation relaxation spectrum 1=7821
  cracks, at twin—grain boundary intersections 4=23136
  crystal dislocations, on deformation, var. stress 3=22772
  crystal dislocations, etching prod. movement 4=22600
  crystals, dislocation etch-figure study 4=25947

Molybdenum—contd
  crystal dislocations, hard particle ring sources 4=4054
  crystal interstitial loops on n irrad. 4=22566
  crystals, X-rays, anomalous dispersion corrections 3=6833
  defect clusters, rel. to fission fragment irrad. 3=17803
  density changes on annealing cold-worked Mo 4=23177
  desorption of CO, O^+ by slow electrons 4=23599
  desorption energy of Ag 3=23521
  desorption of F_2 and work function change 4=13691
  determination in low-alloy steels 2=10923
  diffusion in α-and γ-iron 3=22818
  diffusion of Co^{60} 2=14463
  diffusion coefficient of He^3 1=10011
  diffusion in W(15 at.%)—Mo, electric field effects 3=20237
  diffusion in W-Mo alloys in elec. fields 1=4992
  diffusion in W—Mo alloys in elec. fields 1=11222
  dislocation lines and networks, etching meas. 4=1493
  dislocation pinning effects 3=23313
  dislocations, arrangement 0=1589
  dislocations with Burgers vector $\langle 100 \rangle$, meas. 4=1492
  dislocations, electron microscope exam. of 1 μ sheets 0=15843
  dislocations, at isolated grains in single crystal matrix 3=6529
  dislocations, movement, in plastically deformed specimens 4=25939
  dislocations, prismatic and zone-melted 4=4055
  ductile—brittle transition, pressure effect 4=23276
  ductile-to-brittle transition temp., rel. to stress rate type 4=13427
  ductility and embrittlement, 4.2-700°K 2=23754
  effect on $\gamma \rightleftharpoons E$ transformation in Fe—Mn alloy 4=10426
  elastic constants (77-500°K) 2=14869
  elastic constants, pressure depend., up to 10^4kg/cm² 2=23733-4
  elastic consts., 4.2°-300°K 3=13325
  electrical resistance, 4.2°-300° K 4=22677
  electrochemical test for distinguishing from W and NiCoFe 3=9311
  electron emission charac. in gases 3=418
  electron emission due to He^+ and Ar^+, 0.1-2.5 keV 3=4185
  electron emission due to rare gas ion effects 3=9843
  electron emission by H^+ ions at 1-30 keV 3=24347
  electron emission, secondary, due to Hg ions 4=8625
  electron emission, secondary, energy distribs., on electron bombardment at 100-1000 eV 3=12240
  electron scattering, energy loss 3=2040
  electron secondary emission 2=1490, 3077
  electron work function, for filaments 2=15941
  electronic band structure, by De Haas-Van Alphen meas. 3=6492
  embrittlement by neutron irradiation 1=3993
  emissivity, high temp., measurement 4=14444
  emissivity, 0.65 μ, three types of surface 4=16285
  emissivity, spectral and total, and thermal cond., above 2300°K 0=14876
  energy band structure by isochromat meas. 3=15468
  enthalpy, 0-2400° C 3=20102
  enthalpy and specific heat up to 2337°C, meas. 2=8174
  epitaxy, by partial molybdenite decomposition 4=29069
  Fermi surface area from skin effect meas. 3=2757
  Fermi surface calc. 4=25906
  films, gettering efficiency, at liq. N temp. 4=11265
  films, H adsorption, at liq. N temp. 4=11265
  film, O_2 chemisorpt. effect on work function 4=23657
  films, optical reflection and transmission, 3-50 A 4=22878
  films, separated isotopes, by vacuum evaporation 4=10606
  films, vacuum deposition, using spring-loaded conductors 3=9524
  films, vapour-deposited, adhesion 0=14084
  fission fragment damage tracks 3=15526
  foils, defect cluster elimination by neutron irrad. 4=10014
  grain size, effect on tensile props. 0=16236
  hardening, irradiation, rel. to grain boundaries 3=4881
  heat capacity, 0-2400° C 3=20102
  heat of sublimation at 298°K, calc. 4=24458
  high purity cast, cleavage fracture 4=28967
  as impurity, in Ti, Zr and Hf foils, removal 4=3233
  interaction with H and N on Mo ribbon 1=11600
  internal friction, dislocation relaxation 2=21412
  internal friction peak 4=26520
  internal friction, 20° to 700° C 4=7435

Molybdenum—contd
ion bombardment at oblique incidence, etch effects 1=4672
ions, bombard. of Mo, Zr, graphite, secondary emission. 2=220, 22273
ions, Mo^{5+}, in TiO_2, e.s.r. 2=23704
irradiated, recovery of lattice expansion 0=20851
irradiation damage and recovery 0=7906
Knight shift in n.m.r., $Mo^{95,97}$ 0=2180
lattice defects, field ion microscopy 1=19788
lattice defects, rel. to neutron irrad. 3=22766
lattice focusing of collision sequences 3=22881
liquid, surface tension meas. 4=2643
magnetic susceptibilities and electronic specific heat temp. variations 4=7356
magnetoacoustic effect, 1Gc/s, 4.2°K and band structure 4=15423
magnetoelectric effects in fields up to 180 kOe, at 4.2°K 3=4909
magnetoelectric properties, in pulsed mag. field 4=2928
magnetoresistance at 4.2°K in high fields 2=23249
magnetoresistance, high-field, and Fermi surface 4=17476
magnetoresistance in high-field limit 2=3992
mechanical strength, tensile, n-irradiated, increase on annealing 3=20730
meteorite isotopic anomalies 2=11117
microstresses, due to plastic deformation 0=10263
microstructure, after deformation, onset of brittleness, 4.2-700°K 2=23755
moving edge dislocations 3=10654
neutron induced lattice defects rel. to resistivity 3=22769
neutron-irrad. and cold worked, stored energy meas. rel. to recovery mechanism 4=15506
neutron irrad. effects on physical properties 1=10021
neutron irrad., mechanical props., microstructure 2=10430
neutron-irradiated, X-ray diffraction study 1=2399
oxidation, by dissociated O, kinetics 4=26743
oxidation, 1500°-2600°K, mass-spectr. study 4=4695
paramagnetic susceptibility rel. to temp., theory 1=12520
photoelectric effect, vectorial 4=11695
photoelectron emission, field depend. 2=7643
photoelectric emission, quantum yield 1=4634
photoelectric emission, quantum yield 1=10730
plastic deformation and fracture 2=6752
plastic deformation of single crystals 4=1956
plastically deformed, stresses, temp. depend. 4=17734
point defects, recovery meas. 2=23151
polycrystals, fracture 0=16240
porous, Cs vapour diffusion, rel. to Cs surface ionization 2=11623
production with electron-beam floating-zone melt 4=2030
pure, prep. by floating zone refining and melting by electron bombardment 4=23349
purification by electron bomb. 1=20628
radiation damage, neutron, annealing recovery 2=10380
radiation damage recovery 3=8470
reactive diffusion in Mo—N—C system 1=14310
reaction diffusion of Si 2=23205
recrystallization, torsion induced 0=6328
recrystallization, torsion induced 2=8785
reflectance meas., and complex refractive index estimation 4=13050
reflection, light, far u.v. 4=22877
reflection of noble-gas ions 1=10744
scattering, of Rb^+ and Cs^+ ions 2=20050
scattering, of Rb^+ and Cs^+ ions 3=2047
scattering processof Rb^+ and Cs^+ ions 3=22854
sealing of leads to alumino-silicate glasses 1=6687
secondary electron emission by Ar atoms and ions 3=9842
secondary electron emission, on bomb. with positive ions 0=9078
secondary electron emission, during incandescence, under Cs and K ion bombard. 0=15059
secondary electron emission, and inelastic scattering 0=15058
secondary electron emission, inert gas ion bombardment, up to 50 keV 4=8824
secondary electron emission, rel. to ion mass 4=8825

Molybdenum—contd
secondary electron emission, after 7 keV electron bomb. 0=268
secondary electron emission, Zn and Cd ion bombard. 0=12632
secondary-ion emission, under H_1^+, H_2^+, H_3^+, He^+, C^+, N^+, Cl^+, A^+, Mo^+, 10-100 keV 2=220, 22273
secondary ion emission, under Ne^+, A^+, Kr^+ bombard. 0=17044
secondary ion emission, under positive ion bombard. 1=4652
self-diffusion meas. rel. to temp. 2=6371
self-diffusion in single and polycryst. 3=17787
silicide layers on Mo, cracks due to stresses 4=7704
single crystals, cleavage 4=13428
sintered, U.T.S., temp. depend. 0=1866
sintering grain size reduction on adding Si 3=20921
sorption of N_2, ~ 10^{-10} torr. 4=26718
specific heat calc., from elastic constants 2=8166
specific heat, at 1-4·5°K 1=19715
specific heat, 1200°-2400°K 3=10596
spectrochemical analysis 2=19177
spectrum, isotopic shift 0=15661
spectrum, isotopic shift, $Mo^{96,97}$ 0=5884
sputtered by Hg^+, ang. distrib. 0=1174
sputtering, under Cs ion bombard., cathode sputtering ratio 4=24753
sputtering in inert-gas discharges 1=16442
sputtering by inert gas ions 1=18950
sputtering, by Ne^+, Ar^+, Kr^+, Xe^+ ions, 100-1000 eV 3=4216
sputtering ratios, A^+ bombard. 0=9110
sputtering and scattering, on bomb. with Cs^+ ions 0=9107
stress induced grain boundary cavitation 4=20671
subgrain boundaries, structure 3=20212
Sumoto effect, as electrode material 1=15893
superconducting, critical mag. fields 3=3959
superconducting, energy gap and critical field, by u.s. meas. 3=3958
superconducting, isotope effects 4=14524
supercond., press. var. of crit. temp. 4=21420
superconductivity 2=17726
superconductivity, isotopic mass effect 3=7404
surface coated with Cs, Sr, Ba, Th, work function variation 2=1474
surface, ion microscope study at 20°K 4=29178
tensile behaviour under ultra-high vacuum 4=20672
tensile props. after neutron irradiation 1=20377
tensile props., zone-refined Mo 3=1236
tensile strength, 0°-2300°C 1=20378
tensile strength, ultimate, rel. to high temp. and pressure 4=7418
thermal capacity and enthalpy 1200° to 2500°K 2=23074
thermal cond., 1000-1400°C 2=9417
thermal conductivity measurement (900°—2200°C) 1=9988
thermal conductivity, phonon and electron components, separation methods 3=12930
thermal conductivity, up to 1700°K 3=14395
thermal and elec. conductivity, and thermoelec. power 0=11588
thermal expansion, 1.5° to 12°K 4=9864
thermal lattice defects, rel. to expansion and structural energy 1=14289
thermal props., 1000° C to melting pt. 1=17416
thermionic emission, effect of carbonization 2=15943
thermionic emission, effect of Cs and CsF 2=13584
thin film, optical props., vacuum study 4=30672
ultrahigh vacua, vaporization technique 1=15974
use of electron-microscopic shadowing 2=15119
vacancy annihilation on neutron irrad. 3=2787
vaporization, heat of, at 298°K 3=1876
vapour press., 2100-2500°K 4=24458
vibration spectrum and heat capacity 1=19701
welding 3=18685
work function, effect of deformation 2=1475, 7636
work function, effect of Na and Cs films 0=9062
work function of electron emission during deformation 4=8796
work function, photoelectric, cathode fall, in Ar, Ne 4=568
work function, 700-1100°K, effect of surface poisoning 0=19710
work function, temp. depend. 1=8340
work function, temp. dependence and meas. technique 0=9061

Molybdenum compounds

- work function temperature variation 1=5488
- work function, var. O press. and temp. 4=19076
- work-hardening and recovery from triaxial deformation 1=1334
- X-ray Fourier anal. and line breadth meas. 3=16068
- X-ray spectrum, $M_{4,5}$ emission 0=15327
- yield phenomena 0=21106
- yield stress parameters det. 3=6782
- yielding behaviour, effect of H 2=6737
- Young's modulus data, rel. to temp. 4=30788
- zone melting without a crucible 2=2364
- CO dissociation from surfaces by electron bombardment 1=10667
- H_2 diffusion in degassing, above 1000° C 4=22620
- Mo^+ sputtering during Mo bombardment by Cs^+ 2=1524
- molybdates, luminescence 3=20508
- molybdates, single crystals, for resonance and emission studies 1=11398
- molybdenite, anomalous transmission of electrons 1=7101
- molybdenite films, dislocation networks and Moiré patterns 1=12387
- molybdenite, fission fragment track observation 1=19549
- molybdenite, ion-bombardment effects 3=22851
- Mo blue sols, specific heat meas. 0=18443-5
- Mo borides, carbides and nitrides, elec. props. 1=3707
- borides and carbides, thermoelec. power with Cu 1=12465
- Mo borides, superconductivity 4=14525
- Mo halides, complex, far-i. r. absorption spectra 4=3877
- Mo oxide, filament formation 0=6332
- Mo oxide thin film layers 2=21565
- Mo oxide, whiskers, obs. 3=3374
- Mo oxides, mass spectra 0=10699
- Mo oxides, structure, 500-870°C, and elec. cond. at room temp. 0=18345
- Mo-Permalloy, ageing, diffusion reactions 1=6543
- Mo–Permalloy film, Barkhausen effect 2=16905
- Mo–Permalloy film, domain structures 2=21320
- Mo–Permalloy film, mag. hysteresis loss 2=18909
- Mo—Permalloy, 4-79, hysteresis squareness, and crystal struct. 4=13215
- Mo—Permalloy, 5—79, hysteresis squareness increase on electron irrad. 4=13217
- Mo Permalloy, use for mag. electron-microscope lenses 3=2037
- Mo—Permalloy, 6-81.3, hysteresis, square loop 4=13214
- Mo–Permalloy, tapes, heat treatment effects 0=3275
- Mo–Permalloy, tapes, sq. hyst. loop progress 0=3276
- Mo-Permalloy ultra thin tape, cube texture 1=6527
- Mo-Permalloys K formation and mag. and elec. props. 4=26316
- Mo silicides, mechanism of heat conduction 3=25213
- Mo sulphide, dislocation ribbons, surface widening 2=6336
- Mo trioxide and disulphide, fission fragment damage 3=20253
- $MoAl_{12}$, crystal structure 4=7627
- $MoAl_4$, structure 1=5099
- $MoAl_5$, structure 1=5099
- $Mo(Al, P)_2$, lattice parameters 3=25725
- MoB, crystal structure, rel. to similar types 3=18338
- $Mo_x B_{1-x}$(B = Re, Ru, Os, Rh, Ir, Pd, Pt) superconductivity and paramag. susceptibility 2=2961
- Mo_2B_5, quadrupole bond, n.m.r. meas. and calc. 3=11121
- Mo—B—Si system, reactive diffusion, at high temp. 4=28489
- Mo–Be system, crystal structure 4=17811
- $MoBe_{22}$, crystal structure 3=20839
- $MoBr_3$ crystal struct., atomic 4=17812
- MoC, thermionic emission, 1300°-1900° K 3=16974
- Mo_2C, anisotropic thermal vibrations 0=13488
- Mo_2C, crystal structure, by neutron diffraction 3=11264
- $Mo_{2.08}C$, crystal structure 1=5096
- $Mo(CO)_6$, force constants from vibr. spectrum 2=14245
- $Mo^{99}(CO)_6$, formation by uranium fission 2=1942
- $Mo(CO)_6$, i.r. spectrum 2=16530
- $MoCl_3$, crystal structure 3=13464
- $MoCl_3py_3$, absorption spectra band splitting 4=12441
- $MoCl_5$, visible and u.v. spectra 2=2002
- $Mo_6Cl_8{}^{4+}$, bonding 3=8281
- MoF_3, mag. ordering, neutron diffr. study 1=1251
- MoF_6, vibrational spectra 2=14276
- Mo–Fe, low temp. resistivity 3=13035
- Mo–Hf, supercond. in β-phase field 2=7522

Molybdenum compounds — contd

- Mo_3Ir, superconducting, isotope effects 4=14524
- Mo_3Ir, superconductivity, isotope effect 3=7404
- MoN, structure of the two hexagonal forms 2=4416
- Mo_2N, films, cubic structure, electron diffract. study 0=12043
- Mo—Nb, elec. resist., effect of 1% Fe 4=28530
- Mo—Nb, mag. susceptibility, temp. depend., effect of Fe in dilute solution 1=3882
- Mo–Nb–Fe(1%), conductivity, elec. 4=12859
- Mo–Ni, Co diffusion, plastic flow effects 1=14324
- Mo–Ni, elastic props., effect of temp. and composition 1=20305
- Mo–Ni, Young's modulus variations during heat treatment 0=6292
- MoO_2—MoO_3 system phases, crystal structure, atomic 4=7631
- MoO_2, sublimation 0=10697
- MoO_3 crystals, anomalous growth 1=9110
- MoO_3 crystals, electron micrograph interpretation 0=3286
- MoO_3, films, evaporation and optical props. 2=2421
- MoO_3 fission fragment damage 3=22855
- MoO_3, lattice spacing by electron micr. 4=15784
- MoO_3, surface structure, effect of Mo^{99} radioactivity 1=20656
- MoO_3, weak temp.-indep. paramagnetism 2=6655

- mass of muonium-1 and muonium-2 2=22553
- μ^+ absorption 2=9885
- muonium, mass 1=19221
- muonium, mass 2=22553
- muonium, 1s state, hyperfine splitting, det. 1=19616
- muonium, 1s state, hyperfine splitting, det. 2=22929
- $(p\mu p)^+$, ortho L = 1, μ^- capture rate, $s = \frac{1}{2}$ state probability 4=22445
- precession frequency, μ^+ spin 2=5702
- scattering on H_2 molec. vibration levels 3=2291

Music
- See Acoustics, musical

Musical instruments
- bagpipes, acoustic spectra 3=23988
- bassoons, tone, harmonic structure 4=29712
- bells, strike notes, calc. from freq. of partials 2=19657
- bowing, work done 1=191
- cello, body-vibrations, amplitude and phase 1=209
- Chinese gong, acoustic spectrum 1=208
- clarinet, acoustics 3=16713
- clarinet holes, location and dims., calc. 4=24329
- clarinet, new key mechanism 4=11310
- clarinet, small-vib. theory 3=9562
- clarinet, vibrations of reed and air column 1=9452
- composing machine using random functions 2=2840
- design, role of acoustics 3=16712
- drums, comp. of plastic and calf skin drumheads 1=16032
- electronic, adaptation to Indian music 2=19658
- electronic music synthesis 0=5114
- 50 c/s-3.3 kc/s spectrum analysis 1=5334
- "Flexatone" and "Singing Saw" 0=8761
- grand pianos, acoustic analysis 2=2838
- gut strings, frequency shift, due to humidity 0=5111
- horn, acoustic impedance 1=12948
- horn, exponential, solid, stress and strain limits on attainable vel. in mech. vibration 0=16749
- horns, natural frequencies 1=8188
- Jew's Harp 4=5326
- metal wind instruments, natural frequencies 0=14762
- muted cornet, sound pressure spectra 0=16803
- organ, controllable electric key traction 2=1235
- organ flue pipes, Camere's spirals. 3=215
- organ fluepipes, mouth configuration interpretation 2=17571
- organ fluepipes, mouth vortex system 2=17573
- organ fluepipes, oscill. and mouth space vortices 2=17570
- organ fluepipes, root frequency and mouth tone 2=17572
- organ fluepipes, windstream and air column, theory 2=17569
- organ pipes, acoustic coupling 2=2839
- organ pipe sounds, anharmonic components 4=14296
- organ pipes, stationary and ext. progressive waves 0=2214
- organ pipes, stationary vibrations 1=9453
- organ pipes, transient sounds 0=14761
- organs, masking effect in spectra 0=19326
- organ, quality and warmth of tones 3=9563
- pianos, scale temperament evaluation 1=6937
- piano, sounding-board vibration 1=8189
- piano string, stiff, normal vibration freqs., errata 4=21249
- piano tones, synthesis 2=13413
- piano unison groups, tuning preferences 0=135
- pipes, open-lip, resonance characteristics 2=7301
- self-excitation mechanism 0=5113
- stopped pipes, purity of timbre 0=16801
- stringed, quality determination by "sonograph" 0=2215
- stringed, radiation 4=18358
- strings, response parameters 0=1010
- tonality and consonance, review 4=27265
- tuning fork, sound diagrams 2=19651
- tuning, various tone systems 0=12464
- violas, acoustic testing, at PTB 0=14759
- violins, acoustic testing, at PTB 0=14759
- violins, acoustics, rel. to structure and materials 1=16031
- violins, equalization, resonance curves 0=14760
- violins, "octave vibration" 0=5112
- violins, old and new, acoustic studies 3=14276
- violin strings, correlation of quality with density and elasticity 0=134
- violins, subharmonics and plate tap tones 0=19327
- violin, tone 4=14295
- violins, tuning, tone quality variation 0=16802
- violin, use of circuit concepts 3=9564
- violincello chords, study 2=7300
- woodwinds, Buccol cavity role 4=8348
- woodwind, design and various types. 3=217
- woodwinds rel. to elec. waveform generator 4=10944
- woodwind finger holes, mathematical theory 1=1800
- woodwind, origins and acoustics. 3=216
- wood winds, physical principles, review 2=15693
- woodwinds, reson. frequency 3=18910
